> Come on now people amateurs/ham's men and women and teens lets get the band wagon going and keep our hobby/passion alive and well and we need to police our air-ways and help the fcc to get rid of the abusers the foul language and dead carriers the trouble makers the one's that give amateur radio a bad name off the air.

Now, thats a earfull! Have you ever tried contacting the fcc to get rid of illegal op's? If you have you will know that it doesn't work. If we hear a illegal station, would would you suggest we do? We have had problems on the local repeaters here and have called the fcc until we are purple in the face and little gets done. After about 5 years of bugging them, they finally showed up. They got after one guy that a local had nabbed live and in color sitting in his car. Not a whole lot really happened, and all the worst offenders remain trashing the repeaters. What would you suggest we do about foul language if the fcc refuses to file because of first ammendmant rights? Dead carriers? I outcarrier them... I've found the fcc to be fairly useless as far as enforcement. Not their fault, they don't have the funds /man/woman power. I can think of a real good way to get the goofballs off the radio, but it pretty much entails me beating the crap out of them. Then, I will probably be the one in legal trouble. I can tell by your statements you don't have too much experiance dealing with the fcc. Also no way to self police if we can't make a legal radio citizens arrest. In other words, we can't do it with the present system. MK

Yep, thats because they lack the negative mindset to learning code. It's all in the brain. If you think you will hate code, you will. MK

Not quite. Particularly between the ages of 6-11, children have the ability to acquire languages and communications methods at rates far exceeding those of adults. Making the assertion that a "negative mindset" is the culprit may be emotionally satisfying if you have a pro-Morse test agenda to promote, but ignores a lot of physiological mechanisms behind how people learn.

Its amazing how we always want to lower our standards so that people can join the ranks. Why don't we just do away with things like algebra or english lit. in our schools, that way everyone could get their degree. I mean I have really never had much use for the 3 years of algebra that I took. My current career doesn't make use of it. English lit., well, that speaks for itself. The fact is that people just don't want to work at anything these days. They want it all for the minimum amount of effort. Sure you say the manufactures need more people to feed their market, or people with dyslexia are handicapped, but 20 years ago this wasn't even a big issue. Frankly, excuses are like asshole, everybody has one! We gave an inch with the no code and now they want a mile! I urge everyone to speak up, not only to the ARRL, but to your congressmen and senators. We worked hard for our HF privileges and now we are letting them slip away to anyone who wants them.

We welcome new people to the hobby, it is the only way to keep it alive. We understand the process of learning code can be intimidating but it is not impossible for anyone. Some of you guys wanting to drop the code should be ashamed of yourselves! What kind of example are we setting for or children when we present an example that lowering standards is okay to accommodate slow learners. Being a slow learner doesn't mean someone can't learn it just means it may take 2 weeks instead of 1 to learn the code. Should we do the same for our academic standards in our high schools and universities?

If we loose it then we are all to blame. The OT's that let it slip away, and the newcomers that worked to take it away.

Years ago, I paid $3000 for a 4.7MHz PC with only floppy drives. My friend just paid $1000 for a 200MHz Pentium PC laptop with 2G hard drive and CD ROM drive. Should I be jealous of him? Times change. Why should he pay as much as I did. Your HF privileges are not "slipping away" anymore than my PC above slipped away when my friend bought a better machine for less. Do you feel the same way about people who win the lottery? You don't have any less money even though they got something for almost nothing.

> We welcome new people to the hobby, ...

After they jump through the hazing hoops.

> Should we do the same for
> our academic standards in our high schools and universities?

Nope, but then professional endeavors and amateur hobbies have never had much in common.

Neither have the price of technology, lotteries and code requirements.

> I'm not talking about lossing HF privliges and I appologize for wording it to
> give that impression.

What I am speaking about is that small barrier that separates people who have the self discipline enough to jump a hurdle instead of crawling under it. It sets a standard that invites the type of individual who doesn't require much policing. Someone who has worked for a privilege and wants to take care of it. Granted, amateur radio is not void of some huge problems. I hear a lot of racist crap on the low bands, jamming, obscenities etc. but for the most part the amateur bands are in fair shape (I only operate HF, so I can't in include 50+mhz in that statement). I have noticed that most of the rise in the amateur problems have increased over the past 10-15 years. I'm not sure what that means. Maybe someone can come up with an explanation.

If it were up to me, I would do away with any technical knowledge required for a license. In this day of plug and play technology who needs to know how a transistor works or how to plot a smith chart. The written is equally as difficult for me as the code is to some people. Is that next? Will it come to the point that all one has to do is send in an application for a call sign?

73
Brent Scott, N5CLK

P.S. can anyone tell me why when I look for my old call sign on call sign databases it doesn't come up with a cross reference to my new call?

I am planning on sailing to south pacific for live-long dx pedition.
I do not plan on comming back. Instead I want to do like Danny Greene
did in the 50's and 60's on his yacht "Yasmi".

Am I correct in thinking that Hams might want to fly out to where I am
and crew on the next let....and of course operate /MM and at the next dx
spot?

Any suggestions as to which spots to 'put on the air ' first.

Susan Meckley W7KFI/MM2   S.V. Menage-A-Trois (46' cutter rigged)

Ahoy -- Good Ship Menage-A-Troi
Avast ye DX Lubbers, and where might ye be sailing fer??
Skull Island sez ye, shiver me timbers buts thats the home of
K1NG K�NG and he don't low no Dxpeditions there.
Better plan on Fantasy Isle -- dey got Da Plane Da Plane!!
Or one might furl the scuppers and head for
Tabacco Spit next to Mary Cay

Avoid Grief Reef sez I
A good CW spot might be QueEss Cay
But Avoid Pay Atoll and Bootlegger's Strait, however
But Have a Bon Voyagee Maties sez I.

Me thinks your post is akin to Troll Atoll, Maties

73
Rod -  land Locked in San Diego

BTW - Who's Robert???

Unfortunatly, that happens to a lot of cruisin' hams..... But
most of them WERE planning on coming back....

>Am I correct in thinking that Hams might want to fly out to where I am
>and crew on the next let....and of course operate /MM and at the next dx
>spot?

I doubt it. But I'm sure you could find some cruzers that want to
go along. Check the inter island net on 14.315 at 0800z daily, I
think you'll find somebody to go along for the ride. When you get to
the DX spot, please don't operate /MM. Put your feet on the beach.
If you operate /MM you'll become famous like Don Miller, not like
Lloyd and Iris.

>Any suggestions as to which spots to 'put on the air ' first.

Yes, I'd recommend P5. I think that would probably be very popular with
everyone you speak to on the radio. Don't forget to enlist a QSL manager
before you go, and take along an Inmarsat terminal so you can email
back the logs. Have a nice trip.

The most important thought being lost in all aspects is that ham radio is a hobby. It does have serious sides (ARES/RACES/ARC, ad nauseum) but it should primarily be fun. I agree with a basic code test, in fact I never argued about the current system. It was a rite of passage.

I also enjoy assembling models, yet I do not have silk screening or painting perfected. For those who enjoy code they are free to embellish and enjoy this aspect. Similarly for packet, TV, etc..

When it ceases to be fun, get out. In the meantime let's accentuate the positive aspects of our hobby and quite debating items which will change. Versatility, after all, is what the majority of you have professed in your notes.
Godspeed

If you want to lose the HF bands, just keep CW.

Look at the trends in HF and VHF.

I rest my case.

I agree with your thoughts of not lowering standards be it radio or school. However, you can drop old outdated or non use techniques and put in place something of equal importants to keep the standards up and be more useful. Case in point, as far as higher learning in school: Drop the courses on how to operated a mathematic sliderule and put a course on how to program a computer. Twenty years ago, sliderules were widespread and people needed to know how to use one, because the electronic age hadn't come yet. Now that the computer age is here, sliderules are history. So drop the sliderule and put computer programing in its place, you haven't lowered your standards. You can do the same thing with radio license testing.   I view the code testing about the same as learning the sliderule. Interesting but limited to todays world. If someone wants to learn either skill, go for it.

I wish I could have gotten by with only three years of algebra. When I went to college, we started in calculus and it was presumed everyone had a good foundation in algebra. Should we make everyone take calculus just because?

BTW, I am a General class and I learned code, but it was a nine month struggle and I have promptly forgot it. CQ, CQ, CQ.... MY NAME IS, MY QTH IS..... doesn't interest me. Don't miss code either. I am glad that I was exposed to it on the otherhand.

Ross

 So drop the sliderule and put
>>computer programing in its place, you haven't lowered your standards.
```

>>You can do the same thing with radio license testing.   I view the
>>code testing about the same as learning the sliderule. Interesting
>>but limited to todays world. If someone wants to learn either skill,
>>go for it.

I say limited basically because most CW people send and receive at a slow speed 5, 13, 20WPM or maybe more?) Yes there is a small percentage of people that can copy at 25+ WPM. CW is like speaking a foreign language and takes lots of practice but usually much slower than voice.   Yes its fun for some and yes there are people that get very good at it. If a person likes the challenge, go for it, just like learing a second or third language. In my example, sliderules can get the job done, but they are slow compaired to todays computers and calculators. Should sliderules classes be mandatory? Or should they be phased out (which they are) and the high standards of whatever licensing program be maintained by introducing the study of new technology fitting to the subject? CW should not necesarrily be foregotton but less importantance should be placed on mastering it. A 5WPM test should suffice for all classes of license would be my recommendation.

I bet you more people are communicating by the new electronic internet than by CW. Face-to-face communication, followed by telephone and then followed by internet would be my first guess at the most used forms of communication. I don't belief CW would make the top 10 list.

>Why do you say limited when it is the second most used mode?

I agree with Casey. What's wrong with a little challenge now and then to prove to yourself that you can and to the fraternity that you really want it.

As for justification for CW, I think there will always be a need for it. Imagine for a moment a worldwide catastrophy of some sort and you were able to survive, but your gear didn't. You have nothing but junk and parts left and you have to rebuild something to communicate. A sophisticated ssb unit is out of the question, but a simple oscillator is not. Hmmm, maybe CW isn't such a bad idea after all. John

While your argument makes sense on the surface, I wager the dropping of (more stringent) CW testing will not be accompanied by an increase in standards elsewhere in the test. I site the history of the testing program here as a clear example of how standards slowly, but surely drop.

It has been my experience that many opposed to the CW requirement simply don't want to spend the extra effort, regardless of the subject. They will be no more accepting of an increased technical requirement than they are the CW requirement. After all, why would most Hams need to know about resistors, transistors, tubes (gasp!), etc. when all they do is go down to RS and buy an HT. Why should they have to learn all that irrelevant stuff? They aren't building radios. All they need to know are operating protocols and a little bit on safe operation.

Give in on the CW requirement and the rest will surely fall. Do you believe the bands will be better after this? I don't. 5 wpm CW is not that hard, really. If, for whatever reason, 5 wpm is unreachable, there's still the Tech license. What with repeaters, packet and satellites, there's more than enough modern research work to do and fun to have on 50MHz and up. Why would anyone doing, for example, spread spectrum work want to be on the 80M band?

If they do succumb to the clamor, I hope they leave a little bandwidth on HF reserved for CW. It needs so little, given it's efficient use of spectrum.

Just my $0.02 worth.

NO its not a bad idea for what you just said
just get rid of it as a testing method
keep the mode infact you caould even expand teh cw portiion of the
band as far as i am concern..just get rid of it as a test..we dont have
one for rtty to see if you can type 30-35 words
we dont have one for atv to see if you can get a pic on the air
we dont have one for phone to see if you speak the kings english in a
PROPER manner
WHY CODE
don

You say my argument makes sense on the "surface", well so does
everything you have mentioned. So!!!

>While your argument makes sense on the surface, I wager the dropping of

>(more stringent) CW testing will not be accompanied by an increase in
>standards elsewhere in the test. I site the history of the testing program
>here as a clear example of how standards slowly, but surely drop.

There are some people that definitely fit into the catagory you mentioned, I do not fit into that mold however. I have "credit" in 13WPM CW as I have "credit" in three semesters of college calculus. I have no use for either one and find neither one enjoyable or usefull and after acquiring the passing grades(so I can go on and acheive what I really wanted) for both fields of study, have promptly let them go. Haven't missed calculus in 25 years.

There is some truth to the fact that why know the nitty-gritty about capacitors and resistors if there is no radio kits available to assemble anymore? How many radios have you built lately? Or are you running one of those high priced solid state rigs with a solid state amp, beam rotor and all the extras?

I am not one of those that is advocating lowering standards, just changing the testing material to something equally as challenging but usefull for most hams on an everyday bases. You don't need to know calculus to be a brain doctor but perhaps if you want to be a rocket scientist.

>It has been my experience that many opposed to the CW requirement simply

>RS and buy an HT. Why should they have to learn all that irrelevant stuff?
> They aren't building radios. All they need to know are operating
>protocols and a little bit on safe operation.

See my statement above, I have credit in 13WPM and it was ugly from start to finish.

I am not bitter about CW. Really doesn't matter one way or the other to me about testing or not. I have acquired all the privleges I care for. In fact any form of HF doesn't excite me anymore. Researching VHF radio site loctions, land ownership, repeater equipment financing,-acquistion , linking radios, finding the area of coverage and installation interest me much more than..... making very brief HF contacts to far off stations that sound like Donald Duck, through static crashes, thats if the band is up or down, AND then all you get is "you are a 59, see ya". OR someone running a big amp, with a beam overpowering everyone and not even responding to your barefoot weak signal. Hmmmm, lots of fun for lots of input and very little output. To each his own.

It just kills me to hear city folk, while traveling on vacation outside of their small world, trying to get through to a far off

repeater with their little bitty HT and wondering why they are
marginal. I might add that some of these folks are big HF-CW fans, by
listening to some of their conversations with the locals. My $0.02
worth as well.

If you want a challenge, go to a real college and get a real degree
that will land you a real job. Or climb Mt Everst.

Please tell me where would you get electric power to run your rig if
your worldwide catastrophy occured?   Do you think your electrical
wall socket would still be working? Damn few hams have the capability
to operate when local power is interupted for only brief times
(floods, hurricanes, ice-snow storms etc) Get real! If your
"worldwide catastrophy" occured and I survived, radios would be my
last concern. I would be getting myself a gun and heading to the
easiest food gathering source plus acquiring shelter, fighting off
roving bands of desperate starving people etc,

Most of my ham friends in AZ have backup systems like
solar panels and/or propane/diesel/gasoline powered
generators in addition to food, water, and weapons.
IMO, all *serious* hams have backup power.

Regarding the US Amateur Radio license restructuring proposal by the ARRL:

I am currently a General class licensee, and an ARRL member. I obtained my General upgrade this past January. Prior to this, I was a Tech Plus licensee for around ten years, and a Novice before that for two years.

I was tuning across the 40m band last week, and overheard several Advanced and Extra licensees bemoaning the proposal, bleating about how they have already resigned their V.E. status and quit the ARRL. This is stupid! How I wished the discussion were being held in the General sub-band, so some opposing viewpoints could be heard.

I think the existing license structure is flawed. Disallowing Tech Plus operators HF voice below 28 MHz is to prevent them from talking to those who would encourage them to upgrade. This effectively cuts off the Tech Plus from most of the HF community, and has driven a wedge between two large segments of the amateur population. The US code requirements are out-of-line with the rest of the world. I know of many skilled Tech Plus operators who have either sold off their HF equipment, or have quit the hobby entirely - a shame. Clearly, somthing needs to be done.

In attempting to solve the problem, the ARRL may have gone a little too far. For instance, I am concerned that giving a Novice what amounts to a General ticket will remove any incentive to upgrade. Novices and Tech Plus operators should have to pass the General written elements BEFORE getting those HF voice privileges. However, the only alternative to the ARRL's proposal may be to maintain the status quo for many more years, and that is completely unacceptable. I understand that last month, only THREE novice tickets were issued.

Ever demonstrate low band DX to kids? When you make a phone contact, they can hear and understand what is going on. WOW! You're really talking to someone in Russia or the Canary Islands... COOL! Make the same contact in CW and they are lost. CW is alien, and appears to be a formidable obstacle to most people, regardless of the reality. Yes, we're a society of instant gratification - get over it...

Amateur Radio is losing steam and must be revitalized to offset new and exciting modes of communication that have no license requirements (i.e. the ubiquity of the Internet and cellular telephones). Our government has demonstrated a willingness to auction off underutilized radio spectrum to the highest bidder. If there aren't enough amateurs to justify and defend our frequency allocations, they will certainly be diminished.

Does anyone really think "lowering the standards" to 5 WPM code for HF phone privileges will result in a massive influx of CB-type operators? I don't think so! Rather, people with a genuine interest in radio will be given a chance to experience the thrill of making their first DX phone contact. Personally, I think we should retain the Novice, but add Novice HF phone sub-bands in 80, 40 and 20 meters, and dump the Extra Class. (Asbestos underwear on! ;v)

I think the ARRL proposal will go a long way toward increasing public awareness of, and interest in our hobby. I am all for it... YES!

Regards,
Michael Borowiec, N9EUZ

Congradulations to you Cecil and too all your friends for having
backup power. Excellent!!! I also have backup power (solar) and all
three of my VHF repeaters are solar powered.

I would be interesting just what percentage of licensed Hams have
backup power systems like you have defined?

Hi,
CW is for HF and HF is for CW. Is it not?
I wonder what the trend is. There are lots of CW trafiic on HF bands.
Unless CW is banned(outlawed), I am on CW 99.9999999% I do have a
microphone too, tho. I can work CW all day, all night but no way with
that dang microphone. My family would try to kill me for disturbing
peace in the house, hi. CW and headphone, noone is disturbed.
CW is music to me, a form of arts, a way to meditate. Listen to a good
fist and enjoy!!!
Have a great week end, 73,
Tony, VE6CGX, Fists #3919

"Disallowing Tech Plus operators HF voice....." - is an example of the "I want it all" mindset! They aren't being disallowd anything they can't earn by applying themselves to learn something further. Learning some more CW isn't like demonstrating the ability to perform unrelated brain surgery. CW is related to communications. Everyone is trying to redefine what the term "related skills" means.

Tech licensees have been successfully upgrading for years without having HF phone priveleges. Why do you think they will stop upgrading now?? The only reason I can think of is the "dumbing down" of America's youth by "allowing" them priveleges without teaching them how to earn them.

And....the only way that "US code requirements are out-of-line with the rest of the world" is that we use a graduated system to establish "incentives" to improve oneself. The "rest of the world" requires CW for amateur licensing - now some of us are proposing to eliminate the requirement. It seems to me that the US would then be the one who is out of step.

The whole CW discussion is only a red herring to justify the avoidance of applying extra effort to gain extra rewards.

Don't give them EVERYTHING! There are LOTS of options, but what is key is the ability to CONVERSE on phone with hams of all license classes around the world. Give them a CHANCE to get bitten by the DX phone bug, and dangle more bandwidth and power in front of them, and they WILL upgrade. Right now, Tech Pluses are CUT OFF from HF phone below 28Mhz, and this is NOT a good way to entice or facilitate encouragement.

It's the seperate Advanced and Extra class I think ought to be eliminated. For instance, I would have proposed something like this:

CLASS	Frequency Allocations	Exam Elements Required
A	All frequencies	1C, 4A + some 4B
B	General & Advanced	1B, 3B + some 4A
C	General, limited to 100w out	1A, 2, 3A + some 3B
D	No code Tech & Tech+ 10m phone	2, 3A

Extras become Class A, Advanced become Class B, Generals become Class C (with power over 100 watts grandfathered for existing licensees), and everyone else becomes Class D. You must pass the revised written elements to get the next higher class of license. Noone but the very few Extras lose ANYTHING, and they only lose exclusive use of very small sub-bands!

- This makes the "advanced" class A truly something special without reserving HUGE portions of bands for only a few.

- It gives Generals access to the large Advanced sub-bands in exchange for a harder written exam.

- It gives Tech Pluses power-limited access to General HF phone & CW bands in exchange for a harder written exam.

- It gives no-code Techs access to 10m phone in exchange for some HF questions. (or maybe not depending on International agreements).

Sure, this isn't perfect, but the details can be worked out. I'd like to see EVERY class of Amateur licensee able to have the thrill of HF phone DX contacts, sampling the full range of operating experiences.

> Tech licensees have been successfully upgrading for years without having HF phone priveleges. Why do you think they will stop upgrading now??
>

Read QST... They are NOT upgrading in sufficient numbers to keep this hobby healthy. I'm not talking about "dumbing down". I'm talking about giving someone who demonstrated 5WPM CW proficiency some HF phone beyond the token privileges on the sporadic 10m band. What is the BIG DEAL!

> And....the only way that "US code requirements are out-of-line with the rest of the world" is that we use a graduated system to establish "incentives" to improve oneself. The "rest of the world" requires CW for amateur licensing - now some of us are proposing to eliminate the requirement. It seems to me that the US would then be the one who is out of step.
>

I wasn't suggesting the elimination of the code. It DOES serve a purpose. However, I am arguing that the current license structure is flawed because it isolates an entire group of hams in the VHF/UHF portion of the spectrum just because they don't want to use CW. Why make people become proficient at the difficult 13WPM level just to use HF phone? This is a hurdle for the sake of a "weeding-out" factor that is totally unnecessary. There will NOT be a huge influx of CB operators if you retain the 5 WPM requirement. If there is a huge influx, it will be made up of people with a genuine desire to progress in radio.

> The whole CW discussion is only a red herring to justify the avoidance of applying extra effort to gain extra rewards.
>

Baloney! I worked hard for my General, and I don't like the idea of giving a General ticket to Novice and Tech Plus operators who haven't demonstrated knowlege by passing General written elements. I am suggesting that we ought to open the HF phone "door" to tens of thousands of disenfranchised Tech Pluses out there. Give them a taste of what they are missing, thereby creating incentive instead of RESENTMENT.

Current comment on the ARRL proposal is running 2 to 1 in favor of...
If we don't make alternative suggestions that make sense, you might not like the alternative.

Regards,
- Mike, N9EUZ

After getting my license and playing on 2m for a while I got sidetracked and have been out of amateur radio for a while. I'm looking to get active again and am looking for some good 6m equipment to use while I study my code. However I am a college student so my budget isn't that big. If anyone has a good 6m rig or plans to build one that a college student could afford please let me know. 73's.

"A couple reasons for CW"

#1 CW is an art form that should never be lost.... For this reason alone CW should be a manditory requirement for a Ham license.

#2 There seems to be many experts on CW out there. Most have never been on HF other than a CB radio. The "Fact" is.... when all other modes fail, CW "Will" get through.

#3 In an emergency a battery and some wire will make a simple (Dirty) CW transmitter. The only requirement is you need Hams out there who can send & copy CW!

Ever hear of hurracane Andrew and Homestead AFB. Ask them about how their cellphones worked...Not! The only communications available was Ham radio with a few repeaters and simplex. No Police, no fire, no emergency repeaters. They weren't using CW though to my knowledge. But they could have.

Was that the same on that came back up the Gulf and hit Louisiana..

Next day I spent 4 hours running a health/welfare net. No police
or cell phones involved .. Just me and my ham radio and other Hams.

What you are asking would make your radio illegal ! To
modify a amateur radio out of band makes it non type
accepted and illegal.
And the old story of " I have a licenses for that service "
won't work.
The licenses is to work that band with a type accepted
radio, not a modified illegal radio.
Just go out and buy a Marine Radio.

Agree!
BUT:
I manage to obtaine my licence and is hereby a full "ham" by knowing the
morse-code.
I choosehowever to only use VHF/UHF and is very rear down to HF-region.
Morse code
is never used for me, only packet or OSCAR.

Nobody can do anything with this. After a few months i decide to spend some
time at HF and
is soon QRP on 20-meter on SSB with some friends, or we try the 80-meter for
chat with some
OZ'ers or SM's Still no morse for me.
I hear something in cw from time to time, but dont care about it.
My expensive program for decoding morse is quite good, i use it and by
reprogramming an
terminal or TNC i am QRP with CW by a PC !

The ticket is clear, you have to know it to get a licence on HF, but you
NEVER have to use it!
I think it sucks !!!
It also prevents many from getting this as a hobby because the morse is an
obstacle !

Nobody "has" to get a ham license, nobody "has" to operate cw when the do have a ham license, either. You don't know what you're talking about because you don't know anything about real cw beyond a code test. I've had hundreds of thousands of cw qsos over the years, as many as 1,000 cw qsos on a single contest weekend. Tune 7.000-7.050 some night if you think no ham uses or is not interested in cw.

It's your govrnment which requires the code tests and it's your government which has treaties with a couple hundred other countries in which it has agreed to require code tests for radio amateurs. Go complain to your Foreign Minister about how your lack of usable cw skills is a problem and get back to me when he "fixes" your big problem.

> I think it sucks !!!

Which is good, otherwise the ham spectrum would be flooded with idiots and nobody could use it.

Did i say that we _HAD_ to have a license ???

How many percents og all hams use it regularly ??
And would pass a test given "at the door" suddenly ??

I think someday the WRC "fixes" this one for them self. To bad they have to
spend
time and money just because of some amateurs.
Infact since only ham's uses cw, this is soon an obselete thing we could put
on a museum or somewhere....

Is this the reallity ??
Its to bad though, that many other operators concider them selve so perfect
that i
almost pukes. But to prevent happiness i dont do it yet...

MORSE IS FUN , once you have learned it properly !
Why loose out on the fun part of it ?

oh well, hurry up, get the code down long enough to get 13wpm
then get your advanced. That is plenty of room, and the extra
class license while it may make you an elitist, it is not worth it.
75khz of voice space just isn't worth the hassle.

NOW DON'T READ ANYTHING INTO THIS
I just don't feel it is worth it, I am not whining about the
requirements to get it. IF I WANTED IT, I WOULD GET IT.

I like my hf privilidges, I think that I would be just as much a ham
without them, BUT if a person wants hf they should go thru what
it takes to get the license. If they do not want the code, don't whine
about it, don't do hf, or wait until the FCC finally removes the 13/20
wpm requirements.
<that will be a very long time>

(snip)

Wow! I never thought that I would rate being
called an elitist! <G>

If you enjoy CW and have your code speed up, why
not go for the extra? The written test is nearly
as easy as the novice test, so that is not a
barrier to most people.

Truthfully, I wanted the 2x1 callsign for its
brevity on CW. Now that most, if not all, of the
2x1 callsigns have been issued, I'm not certain
that I would be bothered to go to the trouble
either. And it will be a cold summer day in
Georgia when I opt for a vanity call that has a
recurring renewal fee attached. A one time fee,
maybe. I haven't been keeping abreast of the rules
in this regard, so what I am suggesting may
already be fact.

Fact 1 - We can not open our bands to everyone, because there is not enough bandwidth on HF. Listen on 40m in Europe, and you will come to the same conclusion.
- So we need the candidates to pass some kind of test before we give away tickets.

Fact 2 - We (especially here in Norway) have a problem recruiting younger people into our hobby. The average age of the Norwegian ham is very high !.

Question!
How can you find a test that do not discriminate younger people, and still be so difficult that you need to be serious to pass it.

Solution -

CW at a speed of 8wpm
(Today we need to pass 12wpm here in Norway for the "full license", and that's a little bit to hard)
+
A better knowledge of the rules concerning amateur radio and knowledge of etiquette on the bands.
(If you know what is right, maybe you do the right things)

No one with a licence has the right to moan about being restricted
because they have not/cannot pass the morse test,THEY KNOW THE RULES
BEFORE THEY JOIN THE CLUB.If they don't like the rules ,why are they in
the club.

It sounds more sensible than the *kill all morse* brigade.What a lot of
people do not (or refuse) to recognise is,that there is still a place
for the morse code,it is still a vital part of communications that will
succeed when the lazy push button,or microphone only operators cannot
make a good communications link.It may be old but so is democracy,and
even then there are those who would like to get rid of that.For their
own selfish reasons of course,not for the good of the rest of us ..

Does anyone know how to correct the hum in the background of a u-16
while it is recieving, if you flip the mon. switch, the hum changes to
a  tone in the background. The call readout is on while this problem
happens, but the call light stays on, on all channels that have a ctcss
tone programmed. The manual states that the call will be on if there is
a signal that is being transmitted has the proper ctcss tone, could the
background hum, be the ctcss tone itself.
Any help will be appreciated

The good part is the lower 25 kc of each cw band. Thats where all the
good dx hangs out.
The fone bands don't amount to too much.

>

> <that will be a very long time>

And they can't do it until international treaty is changed. The
requirement for cw is dictated by treaty worldwide. But all said, code
is easy to anyone who really wants to learn it. And attitude is
everything. If you think you won't like it, and won't use it the chances
are you won't. When I learned cw , I was in the 8th grade. I viewed it
much as a game. And it didn't take me more than a week or two to learn
the alphabet and numbers. Within a year I was outcopying alot of friends
of mine that had tickets already. I still didn't at that time. All in
the mind,and the attitude. But I view it just as another necessary part
of getting a ticket. I hate certain parts of the written

test and think much of the questions on the extra class test are fairly silly, but I don't advocate doing away with them just because I don't care for them. It's all the parts that equal the whole. MK

So, I am an elitstis ..?

I always thought I was lazy. I sat on a General for 25 years, conducted a class and when a coupl of my students got their Extra I got off my ass and went in one night and did the 20 WPM, Advanced and Extra.

Does that make me elite ? I still sat iy makes me lazy. I could have
upgraded years before I did.

The fee for a vanity call is a recurring regulatory fee and will
be charged each time you license is renewed. The fee will drop to
somewhere in the neighborhood of $13 around the middle of September 98.

I have been hearing about a "supposed rulemaking" that is supposed
to come within 30-90 days. I could care less what they do with code,
like this gentleman said about certain written questions....I also
don't care about that elite coded segment where all the "great DX"
hangs out.......I have heard many stray into the advanced portion.
I still won't work 'em if I cannot talk to 'em. I will do an
occasional CW contact, but they will be FEW and FAR between

Hey Curtis, Haven't heard you on the air in a while. But then again I
guess thats partly my fault..I didn't write what they quoted me as
saying. But heck,getting my extra didn't change me a bit. I still as

obnoxious as ever...g I could have gotten mine earlier too but I'm the
lazy type myself. The only reason I upgraded was to change my call. But
I'm glad I did now. Get lots more cw room. Mark NM5K

.

If you have to justify CW, don't do it. An extra license offers
no advantage over a tech license above 50 mhz. There is no
magic to the code. If you want to learn it, put in the time and
you will.

I believe that practically anyone can learn CW. It really is easy. I struggled with it when I got my ticket at 10 yrs. and 13 wpm was hard for me too, but one day I decided that I was going to spend at least 15 min per night using it. In two weeks I was copying over 20wpm in my head. Iv done nothing but CW for the past 8 years.

It may not be everyone's favorite, but it isn't too difficult to become an obstacle for any half intelligent person.

Scott,

You are quite right! My son at 12 years old learned CW in 30 days. The number one obsticle to learning CW is "Laziness". There is no way around it..... It takes daily practice..... If you are not willing to invest the time and effort you will never learn code. Not ment to be judgmental, it's just a fact!

Mr. albert,

Dyslexia is a visual disorder. There is nothing visual about CW unless you are deaf. Ask the many deaf and blinf CW operators. The web pages you sent me also indicate that Dyslexia is a treatable disorder. In the case of aphasia I can see that being a special case. In fact, there are laws and provisions for people to exempt themselves from the CW requirement by having a waiver signed by a physician. I certianly would not be critical of anyone in this situation anymore than I would someone who participated in marathons in a wheelchair. I know several people from the ranks of amateur radio that have severe dyslexia. I am one of them.

Excuses are like assholes, everyone's got one!

I have no definite feelings either way. My only belief is that one should take the code test every 5 years to show proficiency much like a driver's license test. Otherwise you are fraudulently using your license if you do not remain proficient. Too many time I hear persons tell me that they got the 13 wpm just to use the phone. Oh, well. Frankly i wonder why KW, ICOm et al have not pushed this revision before now.

Failure of a retest would cause the ARRL, (or the AMA as the case may be)
to lose too much money.

I think that the CW test should be replace with a HF packet network management test.

I still can think of any really use for CW now a days.

Everybody has drop the used of CW in military, coast guard, government, and all other areas of communications where getting the message out is important.

Why, Who works slow old hf packet? Thats something for a written test
anyway.
I hate to sound like a spoil sport, but I think packet is lame. I'd
rather get on the LL modem and boogie woogie..Just my opinion though. I
feel I have the right as much as everyone knocks cw.
> I still can think of any really use for CW now a days.
I can't think of much of one for hf packet. Where as I run cw almost
every day.

> Everybody has drop the used of CW in military, coast guard, government, and

Except for the amateur's. So far anyway. MK

Actually, the military still teaches CW. Ask any navy "O" brancher that
attends NTTC Corry Station, or a 98H from Fort Devans.

Oh... packet is dying.... the internet did it in.... check out the CW
portion of the bands. You will hear 100 CW stations for every packet.

What If I'm not interested in packet.  Should I be forced to take the test on
packet?

I think that in order to be spared a morse code test, one should be able to
display an adequate usage of one's native language with respect to grammar
and spelling.

Now, wouldn't that make the numbers of CW licenses issued in the US take a
considerable step towards a majority of the hams tested? Imagine the results...

Why should we have to "Justify" CW.... 99.99% of everything transmitted on all of the phone modes is "garbage"... When was the last time you heard anything of real value on phone?

It's that .001% that counts..... It's the same with CW.

Cheers,
dt

Hey CB get a life.  Maybe Canada should deport you.  Get the rid of all iditos
out of Canada.  Sooooon there will be no once out there and gov't will cut off
your well fare mony.  I love see that.

Remain silent and be thought a fool, open mouth and remove all doubt!

CB--you are an embarrassment to all hard working, modest, Japanese people. Your ideas a poorly thought out, and you articulation of those ideas is even worse!

To hell with you, sir.

Me too.

My thought: Let's really put some substance into the need-for-CW requlations, by requiring yearly recertification of CW skills, at some modest speed of say 10WPM.

OK all you PHONE only inDUHviduals have fun with this idea. But don't expect me to dignifiy your response(s) with an answer. Esp. you [LOSER} Cutie Boy.

Bugger or booger. Flipping a bugger would quite a feat. Most of them dudes
are heavy! Boogers on the others hand are light and easy to flip. I do it
daily.

yep. I support 50 WPM. go for it.   destroy ham radio now. great
job. good job.   100 WPM ? of course.   CW will kick the all idiots
out from ham radio eh... do it.   Leave the freq unusued and "we"
will take YOUR freq.   MAKE MORE STRICT CW REQUIREMENT
NOW!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Better yet, imagine yourself in a National Park or Forest when the disaster occurs, with neither Bic nor matches (both ruined by the disaster). The only way to save yourself and family is to start a fire quickly using flint and steel. It follows that this archaic skill could save your life - therefore everyone who wants to venture into any National Park or Forest should, by law, be required to demonstrate his/her ability to find an appropriate flint and start a fire with flint and steel within one minute. Otherwise, you have no business venturing out of town ... right??

i appreciated the response. unfortunately there was not one within the guidelines.
the incidents that were mentioned were either too old, or out of the geographic constraint, or both. Although the lack of data does not conclusively prove anything, it does hint at the fact that we have entered a technological era in which
we never (or very rarely) utilize the final "most robust" communication mode, cw, in
times of emergency. Don't get me wrong. I think code is fun (still learning though). However, I believe the era of code as a likely final straw has ended. Sure, the occurance of a cw only method emergency communication for the us ham is possible, however it is microscopically probable. Someone has sited the longstanding naval use of cw... well, you neglected to mention that its use in that
context has ended. There is absolutely no doubt that cw deserves a special place in
the annals of human communication history. However, the rationale that i hear for continued cw requirements are pretty weak. in the end, most of these debate down to
an emotional basis. a few of the rationale for pro-code that i have heard are:

1)last resort common mode
2)limits hf licensees
3)essense of a ham
4)makes a better ham
5)keeps out "lids"

6)other

responses:

1. technically, the robustness and simplicity of cw can not be denied. the commonality is also a powerful argument. however, the fundamental flaw is in the "last resort" qualification. The likelyhood of ever needing the absolutely "last resort" mode for a us ham is pretty darn low. the us govt. has come to the same conclusion as they have dropped cw as the naval last resort.

for the sake of argument, lets say we are forced to use cw as our last resort. do i really nead to send 20 wpm? or would the necessary data get through at 5wpm. i
submit that any scenario that needs 20wpm for rescue response time arguments is invalid because cw would undoubtedly not be the last viable resort in those cases. now, lets say we have the nuclear, asteroid, or aliens, scenario and cw is all we have... i think even 1 wpm would cut it then. so what is with the 20wpm requirement? i submit it is not about necessity, but something that is a little darker in human nature.

2. it would seem that the code requirements do in fact limit the number of hf licenses. however, i submit that many that do take the plunge, learn the code for the test only. given that factoid, i believe the time could be better spent learning more theory, regulations, or operations. perhaps a ham related community service requirement, or so many hours working with an hf licensee or something. bottom line: hf license numbers could be restricted in a number of other, more pertinent ways.

3. i have only heard this one a few times, but i believe there are more out there
that believe this than one would suspect. my only reponse is, i solute you. i tend
to believe that this was the way it used to be and contrary to current popular disimformation, the change in thinking is not a result of a need for "instant gratification". sure, for some nc's this may be true. however, i believe that most
of them would rather spend the code study time on heavier theory, operations, or regulation test preparation.... something that they believe more pertinent to the modern communication era.

4. let's face it this is bunk. i hear and see a lot of bitter, self-righteous talk from hf licensed hams. the code apparently did not work for them.

5. wrong. these people are on every band and can hold any class of license. how
many ham club ex-officers cause trouble on uhf/vhf repeaters?... these people are typically hf licensed... in my experience (thus far).

6. there are bound to be arguments i missed. let's hear them.

i should say, if i haven't already... i am a nc tech. i am currently learning code
to upgrade my license. i think cw is fun. although i didn't necessarily feel that

way when i started. i also feel that hf phone and cw certification should be separated, as they have little to do with each other.

would the necessary data get through at 5wpm. i submit that any scenario that needs 20wpm for rescue response time arguments is invalid because cw would undoubtedly not be the last viable resort in those cases. now, lets say we have the nuclear, asteroid, or aliens, scenario and cw is all we have... i think even 1 wpm would cut it then. so what is with the 20wpm requirement? i submit it is not about necessity, but something that is a little darker in human nature.

<P>2.   it would seem that the code requirements do in fact limit the number of hf licenses. however, i submit that many that do take the plunge, learn the code for the test only. given that factoid, i believe the time could be better spent learning more theory, regulations, or operations. perhaps a ham related community service requirement, or so many hours working with an hf licensee or something. bottom line: hf license numbers could be restricted in a number of other, more pertinent ways.

<P>3.   i have only heard this one a few times, but i believe there are more out there that believe this than one would suspect. my only reponse is, i solute you. i tend to believe that this was the way it used to be and contrary to current popular disimformation, the change in thinking is not a result of a need for "instant gratification". sure, for some nc's this may be true. however, i believe that most of them would rather spend the code study time on heavier theory, operations, or regulation test preparation.... something that they believe more pertinent to the modern communication era.

<P>4.   let's face it this is bunk. i hear and see a lot of bitter, self-righteous talk from hf licensed hams. the code apparently did not work for them.

<P>5.   wrong. these people are on every band and can hold any class of license. how many ham club ex-officers cause trouble on uhf/vhf repeaters?... these people are typically hf licensed... in my experience (thus far).

<P>6.   there are bound to be arguments i missed. let's hear them.

<P>i should say, if i haven't already... i am a nc tech. i am currently learning code to upgrade my license. i think cw is fun. although i didn't necessarily feel that way when i started. i also feel that hf phone and cw certification should be separated, as they have little to do with each other.

Organization: iEARS, CADXA, AMSAT & ARRL Member
Newsgroups: alt.ham-radio,alt.ham-radio.hf,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.misc

First of, please remove this discussion from the rec.radio.equipment and rec.radio.amateur.dx news groups. Those news groups are not the place for this discussion and is only causes QRM and bandwidth consumption.

Second, it is correct, Morse Code today is an obsolete form of radio communications when it comes to commercial applications. However amateur radio is a "hobby", not a commercial form of communications. Since Amateur Radio is a hobby, knowing CW is knowing the lowest basic level of radio communications between a human and a machine (transmitter/receiver). It does not take much equipment or money for radio communications to occur between individuals.

There is also lots of tradition here which I think many new comers to the hobby are missing. Tradition has a value to preserve history for generations to come. Most of the older hams who have been around for years can understand what I am saying. There is a fear among the older amateur radio community that if CW is abolished, the art will be lost along with the dinosaurs.

Third, the CW requirement is a hurdle. To get a HF amateur radio license today in the US, the person needs to put out an effort. This takes time and energy, in other words, WORK!

So its my opinion there are only two reasons (a few minor exceptions) why individuals want the code requirement abolished:

1) They have a fear of failure. Taking a test of any kind, including a Morse Code test, frightens people away from wanting to take a risk.

2) Their just plain lazy to make an effort to learn it. They want something for free. This sure sounds like liberalism speaking.

Shucks, why not just give these individuals everything else for free! (ie: drivers licensee, welfare, Collage education, etc.) It appears the US is turning more and more liberal every day. Abolishment of the CW requirement is yet another example of individuals wanting something for nothing, ak: liberalism.

After all, lots of the stuff you learn in collage today has nothing to do with real world issues. You only learn this obsolete stuff because it makes you think and apply the EFFORT for accomplishment! This is half of what a collage degree is, it proves to society that you can make the effort.

Today when the ARRL takes a pole (vote) to see if the CW requirements should become abolish, the overwhelming voting membership votes in favor to keep the CW requirement. Most ARRL members are the individuals who have their CW requirement license indorsement. The ARRL then takes this voice to the FCC representing the Amateur radio community. The majority of the individuals complaining about having to take a CW test are either not ARRL members, or they are the ones who do not have the CW requirement indorsement.

My suggestion would be if the individuals complaining really want to abolish the CW requirements, those individuals should join the ARRL and become a voting member first. Then when they become the majority, then they can vote to abolish the CW requirement. Debating the issue here on the Internet is fun and entertaining, and stirs up lots of comments and emotions, However all the effort spent here on the intenet from no CW individuals has no baring on the FCC making a ruling.

So until that day comes, I will continue to vote "yes" every time to keep CW as an requirement for the Amateur Radio hobby. I feel its good for the hobby and its good for society not lowing standards every time for a few lazy indivuals!

When is this nocode nonsense going to stop.....Someone joins a hobby and then they want to change it because they can't or won't learn code..... When is this nonsense going to stop? Would you expect golfers to make bigger golf balls because you can't hit the little ones?

There are always people who want the privileges with paying their dues. They want exceptions and special considerations. It is because they are either too lazy or too stupid to do what everyone else does. Give them VHF access without the code, and soon enough they want H.F. access. I not saying there are no idiots or lids out there -- tune up 7.258 sometime. Want to know what the HF bands will be like with no-coders? Tune up 27.035. Next thing they will want access to your station -- because theirs doesn't work as well. And while they are there -- how about a beer. Hey, and what's for dinner?

Some people just con't understand NO!

Cutie Boy doesn't need H.F. access. Give him a 11 meter linear instead.

What is so hard about learning the code? If you have half a brain....................

TR

On December 31, 1997, just hours before the British government ended Morse code monitoring of 500 KHz at shore stations, a freighter in the North Atlantic, the Bahamian M/V Oak, a 13,000 ton freighter carrying a cargo of wood sent an "SOS" using Morse code.

"SOS SOS This is Oak. Position 53 16N 24 50W Stop Engine. We need assistance." The ship was heavy in seas, and the cargo had shifted. She also lost power, and was sinking. The call was answered by a British shore station, and a Royal Air Force "Nimrod" was soon orbiting overhead. The crew abandoned the ship shortly thereafter, and was rescued.

Source: Worldradio Magazine, May 1988. Page 22.

I've read numerous accounts of Morse in action however, this reference was handy.

The flaw in your logic (or lack of it) is the purpose of a national park is
NOT to provide emergency communications in the event of a disaster. That IS
the purpose and focus of amateur radio. Ever heard of field day? What do you
think its' purpose is? If you must be ready to provide emergency
communications, then why not be able to do that in as many ways possible?

know the reality and get a life.   listen to 3950 now. a lot of them are extra hams.

>Some people just con't understand NO!

>Cutie Boy doesn't need H.F. access. Give him a 11 meter linear instead.

I don't use 11m either. Why use radiowaves for making DXs CQs and QSLs. What a hell.   I love to use phonepatches by using 2m repeaters though. It is practical. Everyone says it is cool to have free phone calls too and they show some interests afterwards (say   know code = know ham   and you will get these people away).

>What is so hard about learning the code? If you have half a
>brain...................

I have code. Sorry. I am, therefore, a good ham as coders suggest.

I think that the real problem is that people get bashed for not
wanting to do code, then when they try they get bashed for not
doing it fast enough, then when they get faster, they got where
they <if they did really want it, they got there> wanted to go, quit
doing it and got bashed again

this happened to me, I started code practice <listening> about
a year ago, dropped it because of some of the local hams attitudes
and mannerisms heard on the hf bands, then decided to get it on
my own with no help from the geezer squad.
the guys in question were running a code class on a local repeater
and were real butheads about it.
I got my first dx today, yeah it was great, BUT I like vhf/uhf dx...
as well and that is where a lot of no coders are. Most of the people
that I talk to on the local repeaters are the guys who run them.
<there are only 3 that I frequent> and only 1 of those is nocode.
He works on the side fixing radios for EXTRA class hams.
as well as putting up thier towers and antennas <GRATIS
because that is what ham radio is all about, helping each other
out to defray costs and promote the hobby>

the biggest problem that I see for most new hams is that no one really
wants to help guide them in the direction that they want to go in.
After all it is the ham in question who should tell what his destiny
in the hobby is.
I know several VUCC and WAS award holders that are nocoders....
I also know one DXCC no coder!

I didn't really want to get involved in this, but like everyone else, I just had to toss my opinon out there.

We must face it, code doesn't make a better amateur! I'm not even going to touch the to-code or not-to-code discussion. Rather I will try to point out the fact that just because an amateur knows code, that doesn't make them better then a no-code amateur. Sure there are a lot of no-code idiots out there, but there are also as many idiots out there with code!

I won't argue code out here, what I will say is, if you want to improve the quality of people entering the amateur service, then you should work on the writtem exams! That's where all the knowedge is people. Think about it! I mean, knowing code is like knowing French, English, or any language. Knowing another language doesn't make someone a better amateur, but knowing how a radio works does!

It's sad to hear new amateurs on the air asking how to program their ht's! Obviously something is wrong here, and it's not because of code. It's because our written exams aren't tough enough! I mean what's 55 question multi choice exam supposed to prove. Think about it, the guy already has the answers to the questions, what kind of exam is that? It's this multi choice thing that is killing us. What happened to the old days when you actually had to know something about radios and electronics to get your license? When you actually had to study for the exam!

I suggest we all stop arguing about code, and perhaps start to work on improving the quality of our written exams. 55 questions is just not good enough! And it shouldn't be a 100% multi choice exam, why not toss a few essay questions in there too? And for god sakes, stop releasing the answers!

Keep the code, loose the code, ether way we must address the lack of quality in our written exams.

Okay, now that I've said my peace, I'll get off of my soap-box. I just thought this was a point that needed to be addressed.

FCC and IC told us that we can use phonepatch for ordering the pizza as well as making reservations for hotels or getting taxi from the airport. It is their business for making the profit. We don't make even a cent from ordering the pizza. It's a pizzaman's business.

>In the United Kingdom and other European countries, of course, any
>phone-patch and other third party traffic is strictly forbidden.

then I will probably write the letter to UK when I live there. If you wanna change in something, you gotta do something !!   Once someone finds out that making a phone call is free, they will get the license right away and good way to keep ham spectrum.

There are people how have dyslexia and aphasia! Yes this is a hobby, and use CW if you want. But, the "ham" hobby is about dead, it just hasn't tropped. Where are the young communications "ham's" with the computer ant internet.

Unfortunately, this argument is ultimately useless and self-defeating. Amateur radio will be gone in a few years because those who crave spectrum and can pay billions for it adore the fact that amateurs cannot unite.

Oh well, it was fun while it lasted.

Has anyone had any experience with the Federal Signal Corp Emergency Alert Receiver (EAR). It looks to me like it will work as a weather alert receiver for the new S.A.M.E. Format or as a fire alert receiver with to tone sequential. I found it at
http://www.fsws.com/ear.htm   Jim AA0FJ

Butch, FYI...
   "Cutie Boy" is Masataka Noda, a young Japanese student in Canada.
He raises hell under several different monikers, my favorite being
"Code Sucker". He can be found on several other NG's. And, yes, Masa
is a licenced amateur radio operator, if you are wondering. He's
actually not as bad as he seems...just opinionated. But then, aren't
we all?? :)

Peace,
DUCK

The problem is not Masa, he's fairly easy to filter out. The problem is all the idiots responding to him. I never see his posts firsthand, but I have to wade through dozens of idiots quoting him (complete with his stupid sig file) every damn day.

Be advised, I'm going to start killfiling anybody who flames Masa pretty soon. That should clean up the newsgroups quite a bit.

Hi James,

In my county we are selling them to the public. They have been configured with the tones in such a way that they are only activated if WE set them off. That way we can assure people that they will be heard only when a real emergency is happening locally. The local radio station which is contracted to perform EA broadcasts also sells a receiver, but that gets activated by them for six or seven different counties in the area.

The ones we sell get tested twice a month, once with the test for the school and hospital emergency receivers, and once with the outdoor siren test. Other than that they are only activated during an emergency in the county that would affect many people. And not just weather...

This also gives the public a radio they can use to find out about what is happening, rather than searching through local broadcast media stations who may or may not know yet what is going on...

I am told that they CAN be configured as a general EA receiver and will work anywhere in the country in that configuration. Having seen no advertising I would bet they use the SAME technology since they are relatively new. But that's just a guess. Hope this helps.

> Who did you buy them from?

Directly from Federal Signal.

> How much do they cost?

Something close to list price, we do not get much of a price break only making 5-7 dollars on the sale. We were told that even if we order 40 at once (we might need to soon) we won't get a better price. It's something like $140, but don't quote me too closely.

> How much do you sell them to the public for?

As I said, about $5-7 more than we buy them for. That may change soon so we can cover shipping, etc. but we don't see it as a big money-maker.

> Did you give any
> consideration to the one by either L-Tronics or Reach?

Not sure as the sales started before I did...I just joined this group in January.

> How do you like them? Are they programmable by a PC or some
> other means?

As far as I know they are programed at the factory. Since I have not actually seen one yet I don't know how easy that programming is to alter. I'm told they work extremely well. I know of one large University (hint, hint: see email address) that is buying them as quickly as we can get them, about 5-10 a month, and may want to place a large order soon.

Hope this helps...

  I am looking for mods that will enable Kenwood's
TM-V7A mobile vhf/uhf and the TH-G71A vhf/uhf
handheld to transmit on the VHF marine band.
(Possibly WHICH diodes need to be eliminated)
If you know of such a modification or a web page
that might contain such info - PLEASE drop me an
email. It would be very much appreciated.
Thank you for taking the time to read this posting...

Your analogy between learning CW and College worked 20 years ago BUT not today..(I agree with every other part of your support for CW)..The whole purpose of college today is to

1) Extend Childhood as far as possible..

2) To meet as many people as possible so after graduation (Some 6 to 12 years later), one can "Network" themselves into a "position"..(notice NOT a JOB!)..

The only problem with CODE I see is the attitude of those that say you MUST have it..For tradition or otherwise...HAM radio is dying from lack of interest period..I don't see it as work..It just doesn't hold my interest as it once did..(PLUS, if you've been to alot of local club meetings, there's so much arguing and carping that newcomers are turned away..)..

The solution is NOT to have or do away from CODE..The problem is HOW do we keep Ham Radio ALIVE...Everything must progress or die...

Oh yea, why is it HAM equipment remains SO expensive ESPECIALLY the USED stuff?..When I go to hamfests, I see old JUNK going for as much or MORE than what it cost 20 years ago..Make the hardware AFFORDABLE!..Let's get some GOOD under-100 buck deals going AND market the HELL out of it!..That'd get more folks going..

Innovation doesn't mean forgetting the past BUT building on it for the future..

Thanks for mentioning the geezer club, er squad...If THEY had their way, we'd have to BUILD our own radios to THEIR specs, and ofcourse, BUY all the parts from THEM at an inflated price (unless they liked us and gave their friends special discounts)..

HAM is DYING people..I've got a wall full of lp's some of which will never re-released on CD's BUT I'm not screaming at the companies to either 1) Start pressing vinyl records again or 2) Make me a CD..Just like the LP spelled the death of the 78rpm and it the wire recording...

Code or NO code doesn't matter if the airwaves are controlled by stick-n-the-mud, fuddy-duddy, STUFFED SHIRTS that insist things stay static and never change..That now said, I agree CODE needs to be remembered and taught BUT does it have to be the same way it has been for the past 100 years?..

The Navy is dropping it for better or worse...If you continue, the manufactors of ham equipment will all go under for lack of new radio sales..I say, do what you can to ENCOURAGE not scold folks into learning code..

I think sometimes we code and no-code folks inflateth our true worth in disastors, NOW that cell phone and digital redundancy handle most situations..

In fact, I have a buddy that flies for United that sees the ham radio folks at our local "plane crash/disastor" drills as needing-a-life NERDS that are worse than useless. They're IN the WAY of the professional rescuers using the police/fire frequencies..What's needed in these scenarios is NOT a bunch of hams running around with HT's thinking they're BIG SHOTS while tripping over their own shoe laces..

I didn't take the test to "be a part of the action"..I did it because I like talking to other people...BUT even that's been years..I TOO have been turned-off by the attitude of ham radio in general..

The best hams are those that are HOME BASED/Stationary during disastor situations...

Hello,

Thanks for responding to our Press Release. We our excited to announce the all new 1998 line of Ham Radio Repeater Directories. They can be found at...

http://www.rotd.com/worldxn/

These exciting directories are great for Amateurs on the move, or those who would like to take advantage of the many Repeaters in their Area. We encourage you to visit our site and would appreciate any feedback you offer.

Say, how hard is it to re-freq. an old single channel MT500 VHF?? Either 146.970 minus split or 151.625 simplex. It appears to have a channel element instead of the regular crystal setup. Ideas?? email please!
thanks,
Randy

For Sale: HTX 100 10meter ssb and cw.

Radio is practically new and no scratches, in mint condition. Includes microphone and mobile bracket and microphone hang up clip plus power cord. I do not have the original box and the manual was lost in a fire.

Asking $175.00 or best offer plus shipping.
If interested contact via email at n0eoq@6mt.com

Thank you George n0eoq

Well, near new... it was up literally about 1 hour before my backyard neighbor demanded that I take it down as it didn't conform to our CC&Rs. My loss, your gain.

Best offer, it's packed up and in it's original packaging material. Write me directly at jerryb@cts.com as I seldom make it to these newsgroups.

"Glenn J. Torres" <radioman@communique.net> writes:
>I am looking for opinions, pro or con on Samlex Switching Power
>Supplies.

I don't have any experience with the switching ones, but I've owned 3 of their linear supplies of various output power. On all of them there was inadequate thermal grease between the power transistors and the heat sink. On all of them, the power transistor cases are connected to the positive side of the unregulated supply, which could cause some nice sparks if the transistor cases ever touch something connected to the supply negative terminal. None of them seem to have enough heat sink area to supply rated output continuously while keeping transistor temperatures reasonable without fan cooling.

And on the 15-20 amp version, there are four 2N3055's connected in parallel as the output pass transistor, with no emitter resistors. Thus, the transitors don't share the current equally 4 ways.

I ended up fixing up all of them - adding heat sink compound and a plastic cover over the transistor(s) on all of the supplies, and adding emitter resistors to the high-current supply. After these changes, all of the supplies have worked fine.

So, I'm not impressed with the quality of design or assembly of the Samlex linears. But, with a little cleanup, they seem to make decent simple supplies that cost a lot less than any alternatives I've seen around here.

If I bought one of the switchers, I'd probably take it apart and look for similar problem spots. On the other hand, the Astron switchers aren't much more expensive than the Samlex switchers here, and the Astrons do seem to be better made. In addition, the Astrons have overvoltage and overcurrent protection - the Samlex ones don't as far as I can see. So it may be worth looking at the Astrons too.

Dave

I thought that the U.S. was a free country! In Quebec, we don't have that kind of problem. If your neighbour doesn't like your antenna, he only has to look elsewhere. You could fix some bird houses to the antenna and say it is a support of some kind. Good luck.

The Samlex supplies are good. THey are very small. I have the 1212 which puts out about 10 amps cont. I used it for over a year with a 10 amp mobil radio. It worked great. I recently ordered the 23 amp model for $80 from Techamerica 1-800-877-0072 Item # 910-3916. Samlex provides a 3 year warranty on it!

I had no noise at all generated with it.

I think its a good product for a good price.

Samlex has a web page.

Hi Jerry OM,
  Sorry to hear your plight with the Conformist Nazis. I now regularly
see real estate flyers with "NO CC&R's" prominently posted on the sheet,

as an added plus for the buyer. Maybe, slowly, things are a-changin',
as more people become disgusted with signing over their property rights
to their neighbors for zero cost.   Never did like Communism...

73 and GL on the new QTH!

Don, W6JL

I also bought 2 of the SEC1223 Samlex 23 amp supplies from TechAmerica
and all I can say is that they are great! The price is a steal. HRO was selling
them
for $120, but just lowered their price (I was told) to $100.

They create no discernable hash of any kind. The switching frequency is 50KHz,
(which is not published, but is accurate). They have a fan which comes on at 70
deg. C and at 100 deg. C the whole unit shuts down (thermally) until the temp
drops.

It has total short circuit protection in that a direct short pulls the voltage
down
to zero
(obviously), but draws NO current, and then recovers right away when the short is
lifted. They are NOT ICS rated (as is the SEC 1212 - 12AMP version). Even though
you may see literature to that effect. If seen it is a mistake (direct from the
factory).
The upper limit is 25 amps, and when that amount of power drain is reached, it is
maxed out, and that is all that it can or will supply prior to starting to shut
down. In
most all cases, it will operate just about any 100 watt rig or VHF/UHF amplifer.

They weigh around 3 pounds and are essentially silent in operation.

In general, I wouldn't hesitate to recommend them, especially at that price, $80. But don't expect them to last at that price at TechAmerica or see it anywhere else at that price. It is truly a loss leader, but a great one for us hams. Buy 1, no make that 2, NOW!
I did.

Best regards,

Alan, de WA6AQC

Hi. I have Sammlex 1223 switching power supply at 23 amps.  It is about
four months old and is doing just fine. Doesn't generate any extra
noise. c

Boat Anchors for Sale

1. Heathkit Stuff $200.00:
SB-301 in good working order.................15.lbs
SB-401 final amps (61146) blown..............25.lbs
D 1410 keyer..................................4.lbs
Turner 454C Microphone........................2.lbs
Heathkit Manuals 2.lbs
Packing......................................10 lbs
Shipping weight..............................57 lbs

2. Gonset Stuff $125.00:
G66a Receiver with Power supply..............16 lbs
G-77 Transmitter with modulator/pwer supply..30 lbs
Gonset Manuals and cables.....................1 lbs.
Packing......................................10 lbs
Shipping Weight..............................57 lbs
Receiver and transmitter works.
No microphone

3. Siltronix 1011D Comanche 150.00..........22 lbs
Manual (from "Manuals Plus").................0 lbs
packing.......................................7 lbs
Shipping Weight..............................29 lbs
Needs mike and re-alignment. Was de-tuned down to
Novice portion of ten meter band

4. National NCX-3 Tranceiver $75.00.........19 lbs
External Power Supply/Speaker................25 lbs
National Manual...............................1 lbs
Packing......................................10 lbs
Shipping Weight..............................55 lbs
SSB AM CW on 20,40,80. Needs work

5. Heathkit "Seneca" 6 M Transmitter..$75.00......50 lbs
Heathkit Manual.....................................1 lbs
Packing..10 lbs
Shipping weight....................................61 lbs.
Loads up into dummy antenna.

I would prefer you pick up. If I ship you must pay postage. These are heavy and will be shipped from zipcode 95822. I've included the weights of the items as well as the weight of packaging materials. All for-sale-items weighed by placing the items on the Pelouze Model Y50 Postage Scale.

If interested contact me by email gwilljo@cwo.com.
Greg

I've been using a Samlex 1212 for my APRS station 24/7 for a year now, with occasional use to power my mobile rig, too. I have not encountered a single problem and would highly recommend their switching power supplies. A good PS for a good price.

I think this is a question of bandwith.
CW is narrower than SSB. Probably CW-R is much more narrow.
It means that you can't receive SSB in any CW position.
But if you want to receive CW, you have less noise in CW-R than SSB or
even CW position.

Hi Everyone,

I am starting a collection of ALL SONY World Band "Shortwave" Radios ever made, old & new.

I have about a dozen so far and I need everyone's help to find these original radios in "mint" condition with original accessories and box for collecting.

My question is: Is there anyone out there started such a thing? (...or maybe I am nuts??!!) Where to start looking for older model SONY Shortwave World Band radios? Is there a Radio LIST of all the SONY "CRF","ICF SW" & "SW" models on the net somewhere?

If you have ANY SONY World Band Radio in mint shape, please email me with your model number and best price for a "CRAZY" collector!! :=)

Thanks in advance and any response will be appreciated!

Hello to all would-be DXers. Just got my Tech Plus ticket and found 10m is open from San Francisco to Hawaii, S. Pacific and Australia from late afternoon till after dark.

Just thought you ought to know the propagation is looking better on 10!

I've noticed WWVH into the midwest just about every night, covering WWV on 10 and 15 MHz. WWV has been booming in on 20 MHz just before midnight, but not during the day, which is way counterintuitive to what I was taught about HF propagation!

I think Cutie Boy is just lacking in some male attributes. I hear that they can give male hormones to help combat his problem.

To the fellow with the Tech-Plus ticket, enjoy the ham bands and ignore the

```
likes of Cutie Boy as he is just a pimple faced little college student that
doesn't know his ass from a hole in the ground.  Your earned the privilege to
be on ham radio.

Cutie boy,
  The young man has a TECH PLUS! He has passed the 5 wpm and is welcome to operate phone on 10 meters. Legally!! What is your problem with those of us who have taken the time to learn the code and operate HF? You have been given a welfare liscense to operate above 50 mhz. So operate.

  Are you gay? That name "cutie Boy" is not something a man would tolerate, I don't care one way or the other about your sexuality, it's just that I've seen some of the arguments by the Lambda groups and they are defenseless in what ever cause the "little girlish bitching" types are putting forth. No code was high on their list. They wanted to increase their ranks so they figured that a no code general ticket would do that.

Butch Magee, KF5DE

In general, yes -- but nothing is absolute especially where
ten meters is concerned. Sporadic E in particular commonly
happens after sunset and can be VERY intense then.

Congratulatons!

Now tht 10 meters has whetted your appetite, just think what you can do
on 15/20 .. the latter every day, and into the evening!

KF6RLQ is a relatively new call, so you seem to be on a fast upgrade
path. Keep it up!

73...Phil

Rudi,

Congratulations on getting your Tech Plus license !!!

We are coming out of the low end of the solar cycle, so 10 meters
will be getting better and better. Look for several years of
excitment on 10. Right now 10 will have its "ups" and "downs",
so some days it will be real hot and other days, nothing.

Remember 10 can go from hot to cold in a mater of minutes.
I was talking with a guy across the country, his signal went

from S9 on my meter to S0 in about a minute. Oh well, it
happens. Think of it as part of the fun of 10; you never know
what is going to happen.

You may want to keep working on upgrading. I know that 13 WPM
may seem like a lot, but if you work at it, you can do it.
Once you pass the 13 WPM and General test, you get a slice of
ALL the HF bands.   From there, it's just the written test to
reach Advanced. With Advanced you get a bigger slice of HF
AND if you want, a 2n2 callsign.

73,
Bob

I was KF6JHG, I'm now KQ6WQ

More old XYL tales.
I've worked 10 meters from Guam to Europe till 4AM local.

For Sale: HTX 100 10meter ssb and cw.

Radio is practically new and no scratches, in mint condition. Includes microphone and mobile bracket and microphone hang up clip plus power cord. I do not have the original box and the manual was lost in a fire.

Asking $150.00 or best offer plus shipping.
If interested contact via email at n0eoq@6mt.com

Thank you George n0eoq

Is there any mods that can be done to the HTX-212 to Tx out of Band(yes, i do have permission to transmit out of band) :):)
Thanks in advance
Tony

i am interested in hearing some anecdotes concerning emergency communications in which cw was the only viable, available communication mode. please limit the evidence to the past 10 years and to the usa. evidence such as this is the proof in the pudding. the more the better.

fran

the problem is that most people who would love to do HF have no
interest in CW <at least the no coders I know around here>
btw check me in the callbook in a couple of weeks.................not
now as I just show tech +
I HATE code, I will NEVER do it again, and I LIKE saying that. I
decided that I wanted to do some hf, so I went ahead and took the
plunge. Actually I wanted to put a 10 meter split site repeater up
with 2 meter or 430 link frequencies so ALL who want can use it.
I am not a snotty you gotta doit cuz I did kinda guy.
I am a member of the NCI <no code international>
I did code because I had to, not because I want to. I think it sucks,
it is at best moderatly efficient <MANUAL CODE THAT IS> and
it is VERY unappetizing to the new ham. Lets face it, if we don't do
something with these bands, they are going to be taken away.

hf, vhf, uhf, shf and light bands need to be utilized for retention.

look at what the code barrier created on 3853, 3894, 3850, 3950,
14.313----and by the way just WHERE IS RAINCOAT CHARLIE??
don't forget to mention the casual redneck who got this here radio

at the hamfest......no call at all

GIMME A BREAK!

let people face their ham radio tenure on thier own. IF they want it, support them, if they don't support them, don't alienate them

piss me off, and I will flip a bugger on your windshield!

KD5AMZ temporary AG

Well said and good point Rudy.
However you are fighting the "me .. I want it now"
mentality of so many people.

If one were to look at the Northridge Quake, you'd see that the real emergency communications took place on FM voice. However, a lot of critical messages were passed via packet. If you really want to look at real world emergency communications, check out the back issues of QST for their reports of Hams helping out at ...

All modes of radio COULD be used in an emergency; however that's not the real justification for CW. The real reason is that for many, it's fun. OK, I know it's not everyone's "cup of tea", but when the bands have a bad noise problem, CW does a lot better than SSB.

73,
Bob

I've been "lurking" in these newsgroups, reading all the trash about "know code" vs "no code" emotions.

It's real simple.......put yourself into your favorite natural or man-made disaster REGION WIDE scenario, and the start pulling the plug on your computer, your phone lines, your TV, cable service, your cell phone, and of course the rest of your power, water, sewage, garbage pickup.........then soon the police, fire, and ambulance services become overwhelmed.

Now that you're sitting there in the dark, with injured and scared family or friends, WHO YOU GONNA CALL???   YEAH, RIGHT, 911, HAH!!!!

How can you make DAMNED sure you can get a message about you, your family or friends OUT OF THE EFFECTED AREA?

The local VHF/UHF repeater towers are pretzels. The CB bands are full of looters waiting to hear would-be victims calling for help. With all the power line failures, the airwaves have some SERIOUS QRM, so voice communications is all but impossible.

The bottom line is simple physics.......CW is the MOST ROBUST means of long distance communications when all else fails. I don't need fancy computers and software. I don't need repeaters. I don't need TNCs. I need only a simple power source, like a car battery, a radio, a dipole, and a key.

I maintain that THIS is why Ham Radio has a well-deserved reputation for providing disaster communication worldwide. It's because of trained and self-disciplined operators who commit themselves to be prepared to offer their valuable assistance to their affected community. Hell, isn't that a big part of what Field Day is all about?

So, for my money, I say to those who want "instant gratifaction" by dropping code to gain HF privileges............get proficient in code NOT because the FCC says you need to, but rather because it's smart! Let's not lower another chin-bar so more people can "fall backwards" over it. Instead, let's do our part to help raise more enthusiasts to gain a valuable skill.

Gee, its too bad that you limit this to the last 10 years or I could list:

WW1
WW2
Russian Revolution
Nazi Domination of Europe
Chinese Cultural Revolution
Rape of Nanking
The many nations subjugated by the Japanese before WW2
Natural Disaters of great scale, earthquake, volcanoes, you know, the really big ones that only come along every few centuries
I won't even get into the happenings in Africa

But since these aren't acceptable disasters, I won't mention them. Just what type of disasters can we expect in the next 10 years? BTW, I can go out to my garage and fabricate a CW key in 5 seconds. How long to fabricate an electret mike in your garage? I can build a simple CW transmitter and transmitter from the parts I find in a cast-off radio. Could you make a SSB xcvr out of the same? How did Adm. Stockdale communicate with his fellow prisoners during his 7(?) year vacation at the Hanoi Hilton? It wasn't SSB on 11 meters.

When I was 13 years (in 1966) old Sister Charlotte, K6VFE taught me the code in 6 hours over 3 evenings.

My very fondest regards

Mr. Idiot, what if CW fails ??   Don't include EVERYTHING except CW
for "all communications fail."   Include CW also.

>I maintain that THIS is why Ham Radio has a well-deserved reputation for
>providing disaster communication worldwide.

ask your neighbour and they don't know about it. show your CW keyer
and punch CW keyers and call CQ. I am sure your neighbour will be

impressed !! (grin)

>wiedemann@home.com

and the massive crossposting is the way to illustrate how pro-CWers
are stupid.

I know. Then they will bring up nuclear war which "can" happen in
next 100 years... then I will say all people in the world should
carry guns and bombs to protect from UFOs in next 100 years.....

Yours aren't the examples. Give us the example where ALL VOICE and
DIGITAL communications fail ad CW is only the way to transmit your
signal.   WW I and WWII aren't the example. You were just banned to
use HF spectrum in any matter. Get a life. Think of nuclear war and
say know code = know ham = know radio = know emergency.   Think of
UFOs and say have guns = have bombs = have protections = have safety.

What is a CRF-1? I have a CRF 5080 that I bought in 1975 and like very much. I have not been able to find any information about these older radios on the web.

You might note that COM2: and COM4: use the same IRQ -- that often
causes
problems with other communications software... I suggest removing the
MODEM
for a test, that is the only way to quickly tell if the rig, software
and
cable are OK.

I suspect the cable, rig and software are OK, just a bit touchy!

You will also want to upgrade the software, V1.03 has bugs download the
patch
from RT's site: http://www.rtsars.com

I just purchased the software and cable ... after some start up
problems, and
the bugs in the version 1.03, I finally have it up and running.

10 Kw military surplus generator.  220/110 vac.  4-cyl gas engine.
Totally Self-contained.  Engine runs like a clock!  Gen set regulation
needs heavy load to flash the field coils but runs well otherwise.  Could
probably use a cleaning of the relay contacts.

Set is on an 'un-sprung' two wheel trailer which is ok for short distance
towing... would recommend it for a long trip...

Price $750 obo.  Will trade for small hf mobile.

Please e-mail responses

Howdy, folks. I just launched an Amateur Radio website that is
focused on HF radio. It is at http://hfradio.org - come by and visit.
It is very new. Feedback is most welcomed - what is it you most want
on an HF Radio Amateur website?

Current features at http://hfradio.org include

+ Propagational data, forcasts, and related information.
+ Online discussion forums (Elmer, DX, and more coming)
+ AZ_PROJ server (under development to bring propagation overlays)
+ and more...

Please stop by http://hfradio.org

Thanks.

73 de N7PMS

(the address I am using is an anti-sp*m address. My true address can
be found at the site)

SIX CLUB'S FIRST SPRINT
MAY 16th and 17th 1998
IN CONJUNCTION WITH ARRL 50MHZ SPRINT

The Six Club Sprint will be from 2300Z Saturday of the following week until
0300Z Sunday (May 16-17, 1998) .
THIS WILL BE THE FIRST AND ONLY SPRINT THAT WILL BE IN CONJUNCTION WITH ANY
OTHER SPRINT.
SPRINT RULES
The Six Club rules are simple, score one point for all qso contacts and the
grids are the multiplier. Explanation: If you have 10 qso's and 25 grids
your score would be total grids times total qso's. Other words 25 times 10.
ROVERS ARE WELCOME TO JOIN IN ON THE FUN. ROVER RULES ARE THE SAME AS THE
OLD STYLE ARRL.
HAVE FUN

For further information on forms and instructions to email your results
please go to:
http://6mt.com/contest.htm

Thank you.

TITLE: ARRL Handbook for Radio Amateurs, 1998: 75th Anniversary Edition
ABSTRACT: The best compendium of radio communications technology
that I have found in over 25 years.

Full review is at:

http://www.weyrich.com/book_reviews/arrl_handbook.html

I am open to suggestions of other books which I might review.

I have the following books (all in excellent to new condition) available:

Practical Electronics Troubleshooting by Perozzo
Good information on troubleshooting all sorts of electrical

and electronic devices $ 15

Understanding Data Communications by Friend
The title says it all! $ 15

Understanding Communications Systems by Cannon
This one covers all sorts of communication systems -- not
just the data communications like the one above. $ 15

An Introduction to Fiber Optics by Shotwell
Not in great depth, but an easy to understand book $ 15

Introduction to Electronics and Electronic Shop Practices
by Worden - Mainly a "Shop Techniques" book, with lots
of reference charts, etc., but some theory included $ 18

Digital Electronics by Uffenbeck - Technician Level text
Covers from number systems to shift registers to Programmable
devices to interfacing $ 25

Electricity - Principles and Applications by Fowler
Part of McGraw Hill's "Basic Skills in Electricity and Electronics"
group of texts. Mainly theory, in easy to understand
explanations. $ 20

Electrical Measurements by Smith & Wiedenbeck
Classical measurements book - Engineer level $ 15

Principles of Electronic Communications by Mandl
Includes modulation, amplifiers, noise, transmission lines,
antennas, etc. $ 18

I also have Boy Scout books:

Exploring Handbook - 1958 - close to new condition $ 20

Handbook for Patrol Leaders - 1950 copyright - 1959 printing $ 18

1986 American Red Cross "Expect the Unexpected" $ 2

If you would like more information about any book, please e-mail to W8EK@usa.net. All books are in good shape.

Prices do not include shipping from NE Ohio.

Attention Fellow Computer Enthusiast:

***** COMPUTER SOFTWARE FRAUD ALERT *****

%%%%%%%%%% COREL SOFTWARE EXPOSED %%%%%%%%%%

HERE�S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

�THE SOFTWARE FROM HELL�.

I�ve never used the product they were referring to, so I can�t comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** SOFTWARE FROM HELL ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN�T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON�T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel�s own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel�s Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL�S WORLD WIDE WEBSITE:

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.

- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
====================

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in �Show Codes� no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a � (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a � (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the �WP6.x Export� now reads �WP6.x,7.x Export� in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG�s.

Fixes in 3.5.1 patch
=====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments�such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel�s website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

Not sure What this has to do with the subjects of any of the ng's that you posted it to but, as for me, I have been using Corel Word Perfect Suite 7 for 2 years now and am very satisfied.

Any Moron stupid enough to own a Mac , should get software that sucks , It your own stupidity to even go out and buy such a machine most software manufacturers are pulling away from Mac because they are a dying machine.
get a life and buy a real computer !!!

Just a note about problems with IBM machines . Corel does work on them !!!
there maybe bugs in it but I haven't found any yet and I use it every day
ver 5 , 6, 7, and 8.0

Before you shout FRAUD THINK ABOUT SLANDER SUITS THAT CAN ARRISE AGAINST YOU !!!

STILL AVAILABLE!

Radio Shack HTX-202 2 Meter Amateur VHF*FM Transceiver
$150 obo

This is in the original box with everything that originally came with it:
antenna, charger, ni-cad batt. pack, alkaline batt. case, and manual

Bought brand new at the $199.99 price a few months ago. Only fiddled with it a couple times to see how it operates. Have studied for most of the test, but too busy with work to have much time to finish and get the license.

This radio is extremely close to brand new. No physical blemishes whatsoever. Please email if interested. May also consider trades for other radios.

Attention Fellow Computer Enthusiast:

***** COMPUTER SOFTWARE FRAUD ALERT *****

%%%%%%%%%% COREL SOFTWARE EXPOSED %%%%%%%%%%

HERE�S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

�THE SOFTWARE FROM HELL�.

I�ve never used the product they were referring to, so I can�t comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** SOFTWARE FROM HELL ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN�T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON�T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel�s own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel�s Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL�S WORLD WIDE WEBSITE:
==

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version

3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
======================

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
=====================

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in �Show Codes� no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a � (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a � (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the �WP6.x Export� now reads �WP6.x,7.x Export� in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG�s.

Fixes in 3.5.1 patch

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments�such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel�s website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

I am considering the purchase of this power supply.I would appreciate any
opinions, pro or con, on this power supply.

Thanks,
Glenn

What a silly rant, buttressed by the PC (politically correct) Ziff-Davis marketing machine.

If you are going to use a Mac, why not make asute choices regarding what applications function well on it? Many do the WP job emminently on a Mac.

I've been using WPWIN 6.0 & 6.1 for a long time in pers & biz, done all manner of DTP with it, selling several millions in R/E with its ease of producing excellent flyers & brochures beyond the far more costly R/E software. It is a powerhouse product that has more OPERABLE features than anyone can learn in four years (or needs). Support has always been shitty - and it is everywhere unless it's at $24.99 per call - and Micro$loth is surely no better; even their website knowledge base is inferior to their old BBS.

The only beef I've had with WP it it's gargantuan size and resource-hogging - but look at MS Word, a big dog if there ever was one, woth far less to offer (I run it as well - as little as possible).

You'd think someone into the hands-on & tech know-how to mess with BA's would be away from the dumbed-down Mac & Windoze OS's, and into unix, with which you actually control your own box (and have to know something).

Boy, this submitter REALLY helped me fix boatanchors, yes?

Interesting. You accuse and you name the Bill of Rights. I suspect that you haven't heard the Court's decision that the First Amendment does NOT include the right to slander and defame. That, sir, is what you are doing. By your own post, you admit that you do have experience with the software.

My sympathies to the others you flame and revel against. My free speech rights to make a post and an e-mail based on facts is apparently the target of your hate mail. By name calling and insinuation you reveal your true meaning and intention.

this turn is mine,

i thank the gates of earth, for the fine and coherent work done by MICROSOFT
Corporation, its employees, and subsidiaries.

i prefer to have one big monopolistic behemoth of a company dishing out
the usual stuff, cause then we know who to complain to.

every time someone, some government, some other whining competitor, some
greedy lawyer or anybody tries to screw up a well run company like

MICROSOFT,   just remember that in 90 percent of the cases, we the consumer have paid MORE after they did it and got LESS in return.

Corel, well, thats just another company that just "aint got it all together!"

they will eventually fail and disappear, hopefully, unless some whining buerocrat with stock or a PAC donation in his pocket tries to "save" the consumers interests !!! ha ah ha!

now i feel better. bye!

For one thing...we have no clue who the hell you are since you are posting from a hotmail address. So please feel free to feel ignored!
I hope someone with more money and more time finds you and sues your sorry existence. Or even better pays you a visit with Vinnie and Tony.

So in the meantime...take notice that most software companies web sites list known bugs BECAUSE THEY RESPECT THEIR CUSTOMERS and they want to keep the support lines open.
All alive humans breathe, and all software has bugs. Period.

You are out of order posting a mental barf like this.
Maybe you are frustrated. maybe you are mental. maybe you are a barf and nothing else.

Go away and don't waste my time.

Say Hi to Vinnie. (if you see him coming)

D

List of items for sale from XYL of silent key K4IR.
She would like cash for these items. Please E-MAIL me at
kd4ixr@juno.com

Item	Model No.	Manual	Price
MFJ Versa Tuner	MFJ989C	YES	$200.00
Azden 2M FM Mobile Xcvr	PCS-5000	YES	$150.00
Kenwood Power supply	PS-6	YES	$70.00
Shure Desk Microphone	444	NO	$50.00
CDE Xmit/Rcv Direction control		YES	$50.00
Azden 2M FM Mobile Xcvr	PCS-700H	YES	$150.00
Icom HF Xcvr	IC-751A	YES	$700.00
Icom Power supply	IC-PS15	YES	$100.00

Terms are Cashiers check or Money order and buyer pays shipping/insurance costs. If within north Georgia I can deliver. This is excellent equipment and very well maintained.

Please direct all replys to KD4IXR@juno.com as I cannot check into rec.radio.swap all the time. Thanks!

Randy, does that radio have an upward facing speaker and can you lock the front panel controls so no one (kids) can mess with it? If so, please let me know. I'm looking for a base 2 meter mobile rig with those features so I can leave the rig on but lock everything so my kids cant mess with the rig when its on. Upward facing speaker is so the sound doesnt go into the power supply instead of in the air.
If now, would you know of a radio with these features?

Ralph

I'm looking for a VHF only rig with an upward facing speaker and a front panel lock that can lock all controls while still leaving the radio functional. I need one like this so I can use it as a base rig and leave it turned on all the time so kids cant play with the knobs and controls. If anyone knows of a new rig like this for sale, please let me know of the model number and type. I have a Yaesu FT-2500 with a locking front panel but it has a downward facing speaker. The upward facing speaker is prefered for better audio while sitting on a power supply. I am limited in space so I really dont have room for an external speaker.

Thanks,

Ralph / AA6WW

Randy, this radio is a handheld (aka HT).  It sounds like you want a base station.

I've been doing some research and discovered that the R-10 has two production dates? And the mod that was going around for the gaps will not work for the later production date?

Can you get one new that is in the old date? Are their mods for the new production date?

any info will help mail to

I have done several mobile installations both for myself and for the Sheriff's Search and Rescue Group. In passanger vehicles, I prefer to run the antenna cable under the carpet to either side of the drive shaft hump. My second choice is to unscrew the kick plates on the door opening and use the channel that has always been present, no matter what the make or model car.

I avoid going through the floor boards (as suggested by another) because we often do creek crossing under adverse conditions (can you say very high water?) and regardless of the amount of silicon/rubber sealant, I have alway found that they leak eventually. You also have to deal with afording your cable with proper chaif protection and you expose your antenna lead to foreign object damage from stuff kicked up off the road.

Well, I install for a living and I have found that the best and easiest way is to come in at the driver side and usually you can pull the seat forward just enough to grab the coaxal, run it down the side of the seat, tucking it as you go, pull the pannels at the floor (most screw in some just clip) and run the cable under them careful not to screw into them when you replace the pannels,you will get to the frount seatbelt, the coax should be able to tuck under there also now you can either go from there under the seat and up the middle if you are using a console or you can go under the frount pannel just like you did in the back and run it under the carpet at the peddle.

     HI O$B!  I have a SONY 330-CFR 1.  It is the same as the
     320-CFR1 except it has a tape recorder on the bottom of the
     radio. I have the covers and all of the manuals for it. I bought
     it about 20 years ago. Where are you?

I have for sale two Kenwood all-mode mobile transceivers. A TM-255 2 meter rig and a matching TM-455A 440 rig. Both rigs come with separation kits, mikes, mounting brackets, power cables, manuals, and original boxes. The TM-255 is a 55 watt rig, the TM-455A is a 45 watt rig. Both are in excellent physical and electrical condition, a 9+.

I am asking $500.00 for the TM-255 and $400.00 for the TM-455A. If you buy them both you can have them for $850.00 and I'll throw in the factory service manuals too.

Prices are US Dollars, and do not include shipping costs.

Thanks and 73,

Dino Kitsios, KF6ECO

LOOKING FOR THE LATEST HAM TEST

I'm looking for the latest HAM test for written Element 2
and written element 3A.

My friend wants to get his ham licence but the program I have
might be a little out dated. If someone could send a copy to me
I would appreciate it.

My email address is:

barretta@mci2000.com

Thanks

James

Was hoping maybe someone could give me some wordsof wisdom I am trying to hook up a PK-232 to a Kenwood TH-205AT 2M HT. Pretty straight forward stuff but I cannot seem to get it to transmit. I raceive great. But the radio just will not transmit. I have attach the URL that I am going by to setup the circuit. Any help on this would be much appreciated. I realize that the diagram shows a HTX-202 HT. But the radios are very simuliar and thought they would have the same hook up. I also have attach the link that I use for showing what the PK-232MBX. THANKS Again in advance for any help.

Radio Setup: http://prairie.lakes.com/~medcalf/ztx/wire/y727.html
PK-232 setup: http://prairie.lakes.com/~medcalf/ztx/wire/aea.html

I have for sale a IC-706 and AT-180. Includes items below:

IC-706 MKI
FL-101 CW filter 250Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

AT-180 (auto tuner HF+6M)

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $1150.00 for everything. I will pay shipping lower 48 states. For another $150.00 I will include a Timewave DSP 59+ (latest software). Unless it is sold first. I can be reached by E-mail or my phone number is 216-741-4717.

I will think about spliting up the 706 and the tuner.
Mike

Mike,

I'm interested in your AT-180 tuner if you split up the radio.
Please advise as to price. Thanks and 73   Ed K2SNK

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94 about W5VVI. If you think this guy is benign, think again. What's going on right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

Hello All:

Thankyou for reading this item. I am asking for $115.00 plus a few dollars for shipping and insurance depending upon shiping mode and location.

I am selling a new Radio Shack Power Amplifier. Perfect for mobile and stationary use. Catl. No. 19-1122. Some Features:

o 30 watts output
o Low Noise GaAs Field Effect Transister (FET) pre-amp
o Accepts 0.5-5 watts input
o Double Tuned Helical Band Pass Filter cuts intermodulation
    distortion - This is a must
o 13.8 Volts Direct Current

Originally, I purchased 2 amplifiers for 2 cars and only used one. This one is brand new, Never Used.

For Sale

MPAC-----UHF Repeater by Aerotron

This commercial repeater has been retuned to 444.350 transmit 449.350 receive with preamp. Transmitter is 40 watts out, this repeater has been in service in Hatfield, Arkansas for the past 5 years. The repeater has its own power supply 110volt also has CTCSS multiple tone boards. Repeater can be used in PL mode or non PL mode. Also has a complete set of manuals. Repeater does not include duplexers.

I am asking $800.00 for the repeater and I have a 90 watt amplifier that I will sell for $100.00 with the repeater.

I also have a DB 440 8 bay repeater antenna which I am asking $150.00 for with or without the repeater.

Will sell the total package for $975.00.

I will be at the Little Rock, Ar hamfest on 4-24 and 4-25 and will deliver there or you pick up in Hatfield, Ar.
Or call me at 870-389-6516
Thank you George N0EOQ

Recently, I posted a message requesting help in routing antenna cables for Ham and Public Safety radios in my '95 Ford Taurus. The results were great, and my thanks go out to everyone who helped me break the "backseat barrier".

Now, I have a slightly more cosmetic problem...I don't want to do any damage to the finish on the trunk lid of the car. I'm using trunk-lip antenna mounts, and the kind I'll get probably have plastic or rubber feet. Is there any way to prevent the buildup of water (and the resulting rust) in these mounts?

Over this past summer, I was priveliged enough to run my 4 mag mount antennas (and their respective radios) on the roof of a Mazda SE-5. Placing squares of moslum cloth between the magnet of each antenna and the roof seemed to work fairly well, but it still left some wierd, dull-looking marks. I thought that maybe a heavy coat of wax or 3M glaze might work better in this situation.

This car will be with me for a while, and I'd like to keep it looking mint. Thanks for your help! Also, if you know any really good trunk lip mount or mobile antenna manufacturers out there, let me know. I also wouldn't mind knowing who to stay away from... thanks again!

--

To reply to this message, be sure to remove "---nospam" from the reply-to address. This is insterted to prevent automated mail-spammer "bots" from getting my address and adding me to bulk e-mail lists. Thank you!!!

Thanks for your reply.

The post was a copy of an email sent to various WIARC club members, as such the general location needed not be specified, however this will be corrected in future postings

As for the date, there were no hamfests scheduled during that weekend when WIARC picked its date. It was only later that we were informed that the Hosstraders were having their hamfest in NH that same weekend. Nevertheless it is fairly distant from the Montreal area and takes place during 2 days so we hope this will not greatly affect the number of hams coming to our hamfest.

We're glad you are enjoying the return of the auction to the WIARC fleamarket, and hope that if this auction is successful and gains enough support that it will remain a part of fleamarkets for years to come.

To a ham that is too much, but there are plenty of CB'ers that will
gladly pay that for an amp that will match their Siltronix (Swan)
1011's. You probably didn't think of that before you opened your trap
did you?

the limitations only apply to "operator select" scanning. If you set your scan groups using the
motorola program as "mode slaved", you can have a different set of 16 scanned modes for each
of the 128 available modes in the radio. It requires a lot of forethought, but does open the range of
scannable modes to 128 X 16 (ok, less a bit of fiddling around).

Well I wonder if our American friends think we are dumb. Well I was surprised that when I decided to send out a followup usenet message, I was asked if I want to send it to all 9, yes all 9 usenet groups that the original message was sent to..

You'd think that these people would work out that USENET has groups to place relative information and you don't have to SPAM 18,000 groups to get a message across.

If I wanted a flaming RADIO FROM THE US, I would check out the REC radio newsgroups. YANKS, don't treat the world like idiots because we

can search usenet ourselves and we do appreciate that you just don't
want us to miss such an incredible offer !

Hey.. HAM-SURFER.. you're surfing and got no place to go?..

Check the pages of Dutch Radio Amateur PE1RVK. Lot's of nice info, some pictures, some questions (HELP!) and FREE Ham-Ads (for Europe). Just starting the site but I'm very curious about your feedback. Just a nice site to browse around.

http://home.worldonline.nl/~pvermeul
OR
http://huizen.dds.nl/~pe1rvk

The pages are identical at both addresses, sometimes one's faster than the other, check it out. By the way, there are NO FRAMES, NO JAVA APPLETS, NO MOVIES, NO SOUNDS !! Just colorful text and some lo-size pictures, you can see it with *ANY* browser and it doesn't take ages to load!

Planning: for-idiots-like-myself-PE1RVK-pages (simple technical projects), simple PCB layouts (help me Wim "EIK"!), FAQ.

Goal: want to become an interactive meetingpoint for Europe. ANY meaningfull info YOU want to be published on the site will be there.. so drop me a line at PE1RVK@VRZA.ORG

Hams...

After a long absence from HF I have fired up the HW-101 (I said LONG absence 8^)) and the thing cracked and zapped and spit at me. But I fixed it with some black vinyl tape. (ain't tubes wonderful?)

Having the rig operational again I am thinking of putting up a 80-10 meter vertical.

What's out there, what works, what would you do over again if you had the chance?

Discussion, please.

As you probably already know, a vertical (short) is a severe compromise on 80
especially. Id recommend saving ur money and just hang a wire for that band.
As for the others I hightly recommend GAP verticals. Good mechanically and
an excellent performer.
Dan/W4NTI

I desperately need some info (schematic layout, manufacturer) about a Ham Radio 2m VHF linear amp: Brand=Bias Electronics (urbania, Italy), Model=VHF 160

It's a black metal box with cooling frame on top, One switch (middle position off, down=SSB, up=FM) on front right, and two red LED's on the left ("on" and "tx"). There a double side PCB inside that looks a bit "home-brew" (maybe it's a KIT???).

The amp is based on a MRF 245 that should be able to do 250 watts (absolute max). 160 watts (see model) will probably what it's supposed to give me. It's doing now only 50 watts and switching (the relais) and vox is not working properly. While it looks quite simple on the inside, I'd like to give it a go and let the thing do it's normal job (QRO!).

For Dutch HAM's: Ik heb 'm gekocht van PA3FRD (Friesland?) uit nalatenschap van PA3EQU (silent key) op de markt in Meppel 1997. Misschien is daar nog wat info te vinden?

CAN ANYONE HELP PSE? PSE EMAIL TO: PE1RVK@VRZA.ORG

Tnx very much de PE1RVK (JO21WT)

A vertical is an excellent choice for 80 meter DX but isn't all that great for short-haul work, such as a state-wide net. They can be built for relatively low cost and don't take up a great deal of acreage.

A good ground screen is essential for high transmitting efficiency, especially for a loaded (shorter than 1/4 wave) vertical. As a rule of thumb, you should put twice as much "sweat equity" into your ground system as the antenna itself.

I recommend avoiding commercially manufactured verticals due to their high price and "do all bands" design philosophy. There are a number of dealers (among them, Texas Towers) will sell aluminum tubing in variety of sizes. From one of these dealers, you could purchase enough tubing to make a full-size (1/4 wave) vertical at a lower cost than a short commercially made antenna. Tubing is available in sizes such that the OD of one size is slightly smaller than the ID of the next bigger size, which allows a telescoping or collapsible design.

If you decide to use a shortened antenna, place the loading coil about 1/3 of the way from the top, and use a capacitive hat. Also, solder all of the radial wires together, as it is desirable to maintain high conductance near the base and use aluminum anti-corrosion grease on all mechanical connections.

Good luck and good DX,

jEFF

The following is a list of radio gear that I am offering for sale. All equipment is being made available on a first come, first serve, basis. E-mail offer to me, and all reasonable offers will get a reply if the item is still available.

Icom 706 with remote cable and mounting bracket for face

SG-231 SmartTuner - antennr coupler 1.8 to 60 MHz.

SOLDKenwood TM331A 220 MHz mobile radio. Excellent shape. No bracket or manual.

Yaesu Vertex 2011 commerical VHF radio - Brand new condition
Yaesu Vertex 7011 commerical UHF radio - Excellent condition
These radios are based on the Yaesu 2500M chasis. I have the programming cable and software. Each radio has 99 channels that can be placed into 10 groups.

MFJ 1276 packet/pactor tnc - Brand new condition

DX-390 shortwave radio. - Brand new condition

PRO-39 scanner - restored cellular excellent condition

Icom IC-W31A duel band handie talkie with 800 MHz RX includes cellular
3 batteries - Tucker fast charger (incomplete needs cup)

Uniden Bearcat 895XLT - Includes home made computer interface cable and some collected
software. Brand new condition

3 element 6 meter beam

6 meter Ringo Ranger

Buyer is responsible for all packaging costs, handling and shipping charges/expenses.
E-mail your offer to dwc@mallsurfer.com

Ok, this is kinda stupid, but.....   Have a friend with dual band radio, remote head. Not sure, but think it's an Alinco (about 8 yrs old) if not, it's kenwood, either way, this should be a generic question. Concerning the 'new' push and hold for what I suppose is relayed power on/off like most newer radios are, what would make this radio refuse to turn off?? It had to be wired thru ignition switch so it will turn off and on with the vehicle. Radio works perfectly, but it just won't turn off! Ohm meter says the switch itself on the control head is fine. any ideas??
thanks,
Randy

I am seeking advice on how I might use my Sharp Zaurus ZR5800 as a VHF/UHF packet terminal. The Zaurus has an RS232 compaitble serial port and a terminal emulator program the can handle TTY and VT100 emulations. I don't know very much about TNC's. Would it be possible to use a TNC or Baypac modem with the terminal emulator in my Zaurus? Thanks for you time.

I have a near perfect TS-940S/AT for sale. Includes hand mic, manuals & original boxes (inner & outer). Also included is the SP-940 Speaker, And PC-1A Phone Patch. This radio is a 9.8 on appearance and 10 on performance. I've got 'new radio' fever but I don't 'HAVE' to sell this radio so PLEASE don't waste either of our time with low-ball offers. $1350 (and worth it!). Prefer local sale so I can demo the radio but will ship at your expense.

E-mail if interested

Hi,

I have the mod for the TH-G71A. The specs are:

AFTER MOD RX Capability:

```
136.000 - 173.995       400.000 - 469.995
320.000 - 399.99375  800.000 - 823.9875
849.000 - 868.9875    894.000 - 949.9875
```

If you want a copy of the mod sheet you can do 1 of 2 things:

Send an SASE to: Graham Crosby
2506 Devon Drive
Albany, GA 31707

OR 2:

Log back on tonight about 9:00 PM. I will scan and post it in BMP format .

73,
Graham

If anyone has mods for the Standard C 510 A, I would appreciate it if you would e-mail them to me. It is a new radio and I don't know if anyone has even tried any mods to this radio or if it IS modifiable.
Thanks, Jamie
KE4SLX

You can now find the mods for the Kenwood TH-G71A HT, On my site,
http://www.angelfire.com/ca/ke6gwf/
Note; Currently I only have the wide band Receive mods. If any of you have,
or know were I can find, the full Transmit mods, please let me know.
I will post them, as well pictures that I took with the radio apart, as soon as I get them.
Thank you, Ben (KE6GWF)

P.S. I did the receive mods on mine last night, and everything seems to be working all right.
After mod Rx capability.

I have a like-new Kenwood TH-78A with all original equipment (box, manual, antenna, wrist strap, charger, and battery in excellent condition), and the following accessories:

ME-1   200-memory expansion chip (total of 250 memories)

SMC-34	Remote-control programmable speaker/mic with volume control.
SC-35	Soft case for standard batteries
SC-36	Soft case for large batteries
KLF-3	Filtered cigarette lighter power cord.

The radio is opened up for full tx/rx capabilities and crossband repeat. It has seen only minor use, and works superbly. It is the most full-featured dualband ht available, and will give you good service. I have all of the original packaging and documentation for the accessories as well.

Price is $350. Reply here or email me at one of these addresses, after removing NOSPAM-:

NOSPAM-wd4sgu@juno.com
NOSPAM-wd4sgu@prodigy.net

Thanks.

Mike - WD4SGU

FOR SALE: Yaesu FT-50R Dual Band Handheld (Fully modified)

$225 obo (see what's included free below)

This radio has had the Ultraband mod performed allowing for amazing Rx and Tx ranges, the best of any Yaesu modification.
Visit http://www.yaesu.com/ft50.gif for a picture of this radio.

Features:
-Fully modified!!!
-Great condition, rarely used
-Wide Multi-band Receive for the scanning enthusiasts 76-520, 540-999 MHz (including Cellular)
-3-Selectable Rx modes (AM, FM-Narrow, FM-Standard)
 -Rugged MIL-STD 810 Rated for Shock and Vibration
 -Auto Range Transpond SystemTM (ARTS) uses DCS to automatically poll other stations, indicating if they are within simplex range
 -Digital Coded Squelch (DCS) is used in the commercial industry, DCS provides 113 unique codes in addition to the standard CTCSS tones
 -112 Memory Channels each stores offset, CTCSS/DCS & power level
 -Alpha-Numeric Display up to 4 characters may be used to name each memory channel
 -Digital DC Voltage Display monitors current battery voltage
 -Full 5 Watts of Power Output with 4 selectable power levels
 -Automatic Tone Search (ATS) scans for DCS and CTCSS tones
 -Receive and Transmit Battery Savers built-in
 -ADMS-1C� Windows� PC Programmable (see below)
 -Keyboard and Menu Programming allows for simple FT-50R operation

Included FREE:
-AC Adaptor
-Screen and keypad protector case
-All original documentation, labels, and box (including warrenty)

Also for Sale for use with radio:
-ADMS Software Package (includes cable and software) ($100 obo)
I would suggest this addition to your radio. It allows for the greatest flexibility.

I have a UHF A5 Spectra and although the unit has 128 possible modes, apparently, you can only have 16 channels at a time defined in the scan list....major problem. If one sets up zones, then you can have 16 per zone, but only one zone can be scanned at a time.

Anyone know if the A7 and A9 models have the same limitations?

Mot. glossy spec sheets "forgot" to mention these limitations (an honest mistake????). No other radio I have ever used has such limitations - especially when one pays the price they want for these units.

About ready to go back to my commercial Kenwood equipment...

You have to remember that this is a _REAL_ WORLD_ 2_way_ radio, not a scanner as such! If you are a working radio user, be it public safety-taxi driver-lineman-delivery driver- et al.... can you do your primary job AND monitor more than 16 separate channels at the same time? I can't! Now if my job is to LISTEN to the radio, I can do maybe 25-50 depending on what the normal traffic is per channel, but I cannot do that well with ONE radio..... there will ALWAYS be a situation that requires "locking" on one channel or more for a reason... and there is NO scan priority system that can ever be dynamic enough to deal with that...!

Sure, maybe the Kenwood can have a bigger scanlist... but see which one you will find in the majority of fire apparatii and patrol cruisers....

Spectra radios allow several different types of scanning.First, of course, each frequency needs
to be loaded into a mode location. You then have the following options: operator or mode slaved
scanning. If you set up for operator scanning, you only get sixteen scanable frequencies. If you
set up for mode slaved scanning, EACH MODE gets a different group of 16 scannable frequencies.
Ditto for zones. The A7 and A9 seem to use the same firmware, and vary in power, features,
and control head. Unless you are doing your own programming, which requires a RadioInterfaceBox,
the Spectra.com program from motorola, etc.., using this wonderfully complex two-way as a scanner
is.....well, it's not very....appropriate. Buy a scanner.
sorry. John

Thanks for reading my message.

Here is what I have -

Kenwood TS-570D *NEW* Bought March 07, 1998 No extra's just a wonderful radio!

ICOM IC-T21A, 2 meter ht, 440 RECEIVE, Excellent condition, manual, wall wart charger, complete history documented on the radio including original bill of sale.

Alinco DR-110 2 meter mobile, extended receive/transmit, even receives 300mhz and 800mhz (cellular included!) Includes mounting bracket, manual.

What I am looking to TRADE FOR, WILL CONSIDER adding a few $$ to trade.

ICOM IC-756
Kenwood TS-870S

Will of course consider CASH OFFERS, all items are in excellent condition.

Yes it is a fully programmable from the keypad version, IE just like your ham ht, unfortunately the radio can only be set for one CTCSS tone at a time IE it is not programmable by memory, although you can program any of the usual CTCSS tones the radio does not remember the tone by memory channels it only remembers a global tone that applies to all aspects of the radio IE it must be changed by the user if you use different tones for different freq's. The CP50 however is fully programmable from the keypad and this includes the CTCSS tones IE you have the same capability as your standard ham HT.

Greetings all, I recently acquired an FT-980 CAT xcvr. I was wondering if anyone out there knows which (if any) of the available software will work with the Yaesu 232 (FIF232 ??) interface to control a 980. I know it all controls the 1000 series the 990 and assorted other Yaesu's, but none mention the FT-980.
Any info is greatly appreciated, and replys can be sent to me here or preferably by email (tmedlin@dimensional.com).

Thanks in advance and 73,
Tim KB0OGD

The advice I have always received is to get the right postage, dollars are
too valuable elsewhere and thus highly likely to be stolen.

> Is it still OK to send one dollar or one IRC for a QSL card or has the
> rate gone up? Is it better to buy the foreign stamps and affix them
> to the return SAE? Thanks, John - N2HNT <caylor@concentric.net>

My plan depends on how bad I want the card.

1. Desperatly.... Send stamps of the country on the envelope
2. Need it but not badly... Send 1 IRC with SAE
3. Want to take the chance I'll never hear from them again. $1 cash
4. All else via bureau.

Don't use 1 and 3 often and seem to get pretty good returns with item 2.

Good luck... Remember, the anticipation of receiving the card is the best part of QSLing... (At least that is what they say).

Hi all,

I have for a friend the following radios:

You may email me or call him at (304) 855-4678.

Ten-Tec Omni A HF rig with matching external VFO, Vintage hand mic :) and operators manual for each item. Radio is solid state with analog dial (NO TUBES!!) Sent to Factory in 1990 for a checkup and tune-up (have documentation on that) Radio was purchased new in 1979 and has worked like a champ. 160-10 meters, 3 cw filters, ssb filter, full break-in QSK. VFO allows rx of 2 freqs. simultaneously, tx/rx from radio or vfo or vice/versa. Also in vfo are 4 crystal slots for fixed channels. runs 100 watts on 12vdc using 16amps for full output! Radio is a 9 out of 10..
PRICE IS $400 SHIPPING INCLUDED.
Will trade for the following:
Prefer solid state radio!!
Yaesu 757GX
Kenwood TS820/TS830/TS530, or similar. (looking for something with DIGITAL DISPLAY, IF SHIFT and NOISE BLANKER) with vfo or speaker or whatever... let me know what u have (excellent condition, please!!)
thanks,
Randy

Hi again,
Have for sale for a friend the following radio:

IC-W21AT handheld dualbander. Includes speaker/mic, veh. power cord, hi and low cap. batteries. HAS INTERMITTENT TX AUDIO PROBLEM.. it transmits fine, but no audio sometimes. Audio cuts out with no rhyme or reason, but we suspect the speaker/mic jack as the culprit. this is the radio with the 'telephone' whisper mode so u can hold radio like handheld cellular phone. it has a mic in the radio and another mic in the battery pack for this purpose. the radio works great with dual in-band rx, cross band retransmit and rx, lots-o-features for Mr. Fix-it. PRICE IS $125 INCLUDING SHIPPING

Will also use this as 'boot' for the other radio trade (see ten tec ad)
will also trade for a 1kw (rated at more than 600 watts) antenna tuner, prefer roller inductor tuner like a MFJ tuner or a Dentron Supertuner.
Wish list: prefer Drake Model MN-2700 tuner.
please email me or call Slade Sowers at (304) 855-4678
thanks,
Randy

I have a TS520 hf rig I would like to sell or trade for a good HT... would like an older dual-band, but will take newer 2m. An MT1000 would be perfect as well (VHF, complete).
  the 520 works great, face in good cond., case fair (cosmetic, no dents)
Will sell outright for $200.
email for details or phone number!
thanks,
Randy

Radio controll airplanes and cars and boats don't seem to have any problems with interference, but I bet the modelors get their heads together BEFORE the contest to make sure of sufficient distance from each other frequency wise. I bet one of them will probably help you out right here.

Peter,

What will the transmitters be sending and how much power? If the control parameters permit you may want to try some kind of packet transmission or sequencing. Running the transmitters at the same time will work as long as the receivers are able to discriminate between the signals.

For example if the bandwidth is small - pulses (on off) at a low data rate it would be quite easy to fit 4 transmitters into that band. On the other hand if it were video you would have a problem.

/Len

RC stuff usually only operates on one frequency but modulates the frequency to tell the plane to move the rudder or ailerons or to tell the car to turn left or right.

Has anyone tried operating 4 radio transmitters in close proximity to one another? I need to do this for a robot contest, and wish to select the frequencies to avoid interference. There will be 4 robots operating simultaneously, each on a separate frequency. The transmitters must all be in the range of 75 MHz to 76 MHz (surface model control band).

Please reply by e-mail to peter.gregson@dal.ca.

Thanks in advance,

Peter Gregson

yes indeed. In fact even during non-contest casual flying the transmitters are impounded, and only one transmitter on each frequency is allowed out of the impound at a time.

Randy OM,

That is an EXCELLENT price on your TS520. Those rigs are well built and can last a lifetime. Perfect rig for anyone to get started on HF.

73,
Don, W6JL

I am looking for info on a 2m/220 mobile radio. So far the only ones I have found anything on are the TM-631A and TM-642A (both from Kenwood). Are there any others out there, and why aren't they more common?

I'm a ham radio operator and a first responder for my local ambulance corps, and am trying to attach a couple of trunk-lip antennas to my 1995 Ford Taurus SE, but I'm having problems getting the cables from the trunk into the passenger cabin.

Does anyone know how I might snake the cables (about 1/4 inch in diameter) under the rear seat, or have any alternative routes? The seats are partial-leather, so they may be attached differently from all-cloth seats.

I'd like to keep the wires as close to the floor as possible, to keep things looking nice, but I'll go through the rear speaker hole and over the rear deck if I have to...I'd prefer an alternative...

Can't say that I have any experience with installing ant. on a Taurus, but I have installed a few hide-a-way strobes here & there.I have found that sometimes it's just plain easier and more aesthetic to just punch cables through the floorboard and run the cable up the frame, and then come up under the carpet where you want them. Sometimes you have to drill holes, but you would be surprised at how many plugs are already in place by the manufacturer. Use lotsa silicone at the holes if you don't have rubber grommets.

Not sure if I posted this already, but... I have 2 MC-50 desk mics for sale at $50/both. One mic is in great condition, works great, other mic looks rough, base is great, works ok but has hum... inside base is evidence of many rewirings, and I believe the audio leads being reversed is the only problem. Please email if interested! Buyer ships COD/CONUS or prepay.
thanks,
Randy

I have run wire under the carpet and followed the edge around the molding by the doors. If there is a 'hump' in the middle you could follow it under the carpet. Once your get to the back I think you should be able to find enough room between the seat bottom and the side panel to get to the trunk. Most seat bottoms should come off if that helps. You might even be able to under the seat once it's removed. I've never had a Taurus so I don't know details.

Hope this helps,
Chris

Posted this in a prev. msg... but it was kinda lost in the questions..
Have Motorola headset/mic, behind the head for use with cap, etc, like the 'Nascar' guys use except black. Dynamic mic element. Could use earpads,

these are a bit too mushy.. has top velcro adj. strap and coiled cord. Boom
adjusts in/out, hinged halfway and mic pivots. works great! it's a 4pin
plug now, but have the factory barrel plug (4contact) desoldered, not cut.
It's model NMN6064A SP04 if u wud like to look it up at Motorola's website
or elsewhere. List new: $500 Priced at $90/firm/uship Please email if
interested!
thanks!
Randy

Damn!

I hate to see people led down the wrong path!
Routing Antenna Coax is a simple procedure in almost any
car. THE COMMENT OF DRILLING A HOLE THREW THE FLOOR IS
UNCALLED FOR. I can not believe he said that.
Routing the coax under the rear seat is so simple and fast.
Routing: Crawl into trunk and pull the felt like liner away from vertical
part of rear seat. You will now see the lower corners of the seat have
room to
push many cables threw them.
From the back seat lift the corner of the horizontal bench seat.
Lift up any felt like material and reach upward for a routing path
determined
by trunk inspection.
I still can not believe he said that! Brake lines, gas lines, and the
possible
snagging of the feedline under the car are not what I consider correct
methods.

Hope I saved him in time,
Jack

Where are you located at?? Get with me in email and I'll have the info
you need by then...yes there is a +DC input for the exciter and
the rcvr (the 7amp fused feed to the control head) that uses the
smaller pins...the large pins are for the PA only

Now do you honestly think that this guy or the general populous is gonna
under stand this shit?
This is another example of nerds going overboard on a question...
Get to the point!!!
If he doesn't know what Desense is, he aint gonnna what all that extra
shit your talking about is, Einstein.
Look, why can't we just adopt the KISS rule for the less knowledegable
guys, Keep It Simple Stupid & more will benefit from the information
shared!.

Your answers may be right, but you are going WAY overboard for a SIMPLE & COMMON problem.
When I (was a tech) went onsite to service commercial repeaters suffering from desense, I never had to go through that shit, you have to be out of your mind to think I was gonna sit their with my Svc.Monitor and measure half the levels you mentioned, I might as well build a new repeater form scratch!

I can't sit here & prescribe a remedy to fix your repeater, cuz i aint lookin at it, but you can start by making sure the simple things are verified OK, like:
TX/RX lines & connectors.
Is your Duplexor tuned properly? (use a tracking generator not the Mr. einstein method).
Do a 'general' check on the Recv'r, is it to spec?

Most of the time, desense could be eliminated by just making sure all your connections were solid & good & the radios were properly shielded...
Occasional tune ups on the Rcv'r were not uncommon, just not necessary to get so in-depth...
However if you wanna break out the Atomic ion Calculator, be my guest dude.

Don't feel alone, your observation is very much the truth...
Radio in general is stale because of these , pardon my jargon, Old Farts & Know it alls.

When I got into Ham rdaio (bout 6yrs ago) I was an avid electronic enthusiast &
wanted more, more, more knowledge... I was also a hacker of the highest degree
(still am) & ended up teaching myself most of what I know...
I found it annoying to have to listen to these A**holes chastise other "younger
generation" Hams, because we didn't have 9 mile high HF towers or, know code, or
say
73's, etc...
Well I eventually got so into radio I ended up a Radio Technician, you would
think,
every Ham's dream job, right?   WRONG. I met the most dispicable people, many of
which were Hams, The commercial guys always felt they were above Hams, simply
because, they got paid to do it & use commercial equipment.... I was constantly
harrased being a ham working in commercial radio, by the older "more experienced"
guys, I didn't give a shit, I excelled & eventually started my own shop. Mind you,
I
was only 25.
I got so fed up though with the assholes in the business, many of which run closed
repeaters & the ones whop think they are so much smarter than me & think simply
cuz
I was 23, 24,25 yrs old, I didn't know a damn about radio, while at the same time
I
was getting paid to fix their radios & being Emailed up the wazooo to answer tech
questions on related topics...
It is PURE arrogance on the part of these guys who think they know everything &
feel
bestowed to treat other guys like shit cuz they are new to the hobby...
I absolutely am turned off by the 'radio crowd' in my parts (Bay Area , Ca.),
bunch
of old effer's who have a monopoly on freq pairs cuz they have money & are all
part
of the same "old boys club"...
Screw those guys, I could of continued to make money doing radio on my own, but
why
work around assholes I can't stand?
I switched careers & am now a Network Engineer making almost twice the salary, and
I'm still only 26... I also run my own Paging & Email service. so I still have
ties
to the wireless industry both commercially & as a hobby of course.... I have a
truck
fully decked out for communications, with all the top gear, but that doesn't make
a
better ham than anyone else though, what does make me way better than these old
assholes, is I won't chew your ass if you ask a "dumb" newbie question, or debate
it, nor will I run you off a repeater, because it's "Private".... I am willing to
spread the knowledge & help other guys who don't know what I know, believe me I
learned a lot of secrets working in the business & never hesitate to share them..
Face it Old Timers, the days of the secret handshake are over....
Who gives a damn if we dont't know about about tubes, crystals & code....
You can't hold back NEWER Technology or the knowledge thereof...
It's alright dano, I'm on your side.

A lot of info from this gambino guy who flames amateur radio in the
rec.radio.cb ng then decides he has all the answers. Just another
little duck trying to get into the big pond!
Its time to grow up little duck.
Reguards
Al

hmm... an awfull lot of protesting and generalization here... it is just as bad to

chastise an entire group (i.e. old farts"... as it is for one of them to chastize a
newbie for asking a "stupid" questions (the only stupid question is the one that doesn't
get asked). Perhaps, you should consider treating everyone as an individual... After
all, they are individuals. All the message below will do is create animosity, and
further the "arrogant young twit" stereotype.

Hey.. lighten up... :)

 under stand this shit?
 This is another example of nerds going overboard on a question...
 Get to the point!!!
 If he doesn't know what Desense is, he aint gonnna what all that extra
 shit your talking about is, Einstein.
 Look, why can't we just adopt the KISS rule for the less knowledegable
 guys, Keep It Simple Stupid & more will benefit from the information
 shared!.
 Your answers may be right, but you are going WAY overboard for a SIMPLE
&
 COMMON problem.
```

When I (was a tech) went onsite to service commercial repeaters
suffering
from desense, I never had to go through that shit, you have to be out
of
your mind to think I was gonna sit their with my Svc.Monitor and
measure
half the levels you mentioned, I might as well build a new repeater
form
scratch!
>
I can't sit here & prescribe a remedy to fix your repeater, cuz i aint
lookin at it, but you can start by making sure the simple things are
verified OK, like:
TX/RX lines & connectors.
Is your Duplexor tuned properly? (use a tracking generator not the Mr.
einstein method).
Do a 'general' check on the Recv'r, is it to spec?

Most of the time, desense could be eliminated by just making sure all
your
connections were solid & good & the radios were properly shielded...
Occasional tune ups on the Rcv'r were not uncommon, just not necessary
to
get so in-depth...
However if you wanna break out the Atomic ion Calculator, be my guest
dude.

STUFF SNIPPED

I gotta tell you, "DUDE", that I very much appreciated Paul's response.
I wish others had added their in-depth knowledge of the subject.

Yes, I did understand what he was saying.
Yes, I am building a new repeater from scratch; including the duplexer.
Yes, I do have double-shielded cables everywhere.
Yes, I do use a tracking generator to tweak the cavities.
If you have the commercial version of an Atomic ion Calculator, it's
probably my design.

Don't assume that other people are dummies. There are no dumb
questions,
just...well, you know.

Sit back, take a deep breath...and a midol...and quit abusing
knowledgeable people for being helpful.

Thanks again, Paul.

miker

Howdy! It's time to start thinking about severe weather in Oklahoma, Kansas, Arkansas, and Missouri. To that end, I would like to announce the creation of a new Listserv for folks who are interested in, or already participate in, the SKYWARN program in the states of Oklahoma, Kansas, Arkansas, and Missouri. One does _not_ have to be a licensed amateur radio operator to participate in SKYWARN, although "ham" radio does play a major role in getting information to and from the various National Weather Service offices.

This Listserv will _NOT_ be used for issuing any watches or warnings, but rather to discuss what SKYWARN does, information about training classes, and related matters (including discussion of ARES and REACT). Anyone is welcome to participate (subscribe), but this Listserv will concentrate on the 4 central States that make up "Tornado Alley".

To participate, contact the Administrator for the Listserv - me! :-) Send a message to   r_brown@getonthe.net and I'll send you the URL information.

Thanks, and 73 (Best Regards)!

Thank you Tom,

I think that we have to realize that people will be people. None of us are perfect and we have to take the good with the bad. Sounds like these people have found the wrong souls to listen to . It is sad that there are enough bad eggs out there to spoil a the fun for a few of us. I think that you need to go back and look again.

In the four years that I have been in this hobby (HAM radio) I have had contact with those "bad HAMs." I have also had patience with these people. You can learn much from anyone, even the ones that make fun and talk big. In the last two months though, I have spent time learning CW. During this time, I have only had support and help through what I thought was going to be the most excruciating task of my life. Everyone has been positive, even my no-code-tech and tech-plus friends. We have a healthy "race" going on. There are many that I know that will not go to the HF bands. They have that right. I want them to enjoy what they do and they want me to enjoy it too. Some of those "no-code people" know the code much better than I. They support me, and I them.

No, you're not inferior, or a non-CW person, you are a Ham. Please try again. Maybe you are trying too hard, or not trying at all.

I will be a friend to the tech or novice, even when I get my general ticket. Look for me, or anyone like me.

73 or whatever you like...

N3RJY

Hi, probably looking for a needle in a haystack here, but I recently aquired a set of 599D twins and need some help. Seems the transmitter doesn't want to work.... funny thing is, I have located two more sets of radios locally, and those transmitters don't work, either... the relays kick and IP and HV voltage are there, the tubes are glowing, but no dice. Same exact thing with others I found! Some bug in the radio?? seems to be a popular bug. the previous owner has had the radio 20 yrs (in the closet) with the transmitter broken, so it apparantly broke very early on.. what could be the problem?? Any help appreciated.

Would also be nice to have the 2m and 6m boards for the receiver, too, if anyone has them around!
thanks,
Randy

It is most likely Intermodulation that is causing you to hear the ambulance service. Intermodulation is the mixing of 2 or more frequencies resulting in the creation of another frequency. This frequency may fall within your bandpass and sound right on.

My HTX 202 has performed under very tough conditions for over 4 years now, flawlessly.
There seemed to be a group of them however, roughly two to three years ago that had some serious problems with the finals and bias.Also some modulation problems were reported.
I think when they tried to speed up production to meet demand, quality control went out the window.
On the subject of intermod, I have found the HTX 202 superior to most portables. If you modify them for wide band receive however, there are serious problems with rejection.
Just remember it is a portable, and any comparison must be with other portables.

Just my thoughts.

What I have is a Compaq Presario 200mhz Motherboard - No CPU - No Memory -
Just a NEW 200 Mhz Motherboard - RETAIL $995 just for the motherboard the
way it is..
Retails over $900 just for the motherboard

Looking for more Amateur Radio Gear .. Email me with what you have to offer
I am OPEN to just about anything dealing with ham radio

Daniel,
I hate to burst your bubble but what you have is worthless. I suggest you check out some on line motherboard suppliers and you'll see you can get a motherboard for around $80.00 but unfortunately because what you have is a coimpaq they made special connector and such. Its just not supportable.

tony

Hi to all on the News Group !

My old TS 180 (and apparently a lot of other transceivers)
have a connection for interfacing a transverter.

I cant see any reference in my manual for such
an interface on my TS 450.

Can anyone enlighten me ?

Thanks   Alan VK5BWG

Let's try to "talk" on the ng as though we were on the air.
Clean language and no foul metaphores.

Fellow Hams
I can't understand the advantage of the foul language on these
postings. Let's all get together and see if we can stop this.
Hate to see ham radio go the way of the "citizen's band".

The reality is that there has never been a large demand for, or use of, transverters with HF radios in the first place. And now there is even less demand and reason for them thanks to the popularity of VHF+ multimodes and the expansion of most HF rigs to include 6m. The transverter jacks (and associated internals) have become an unnecessary expense in a market where price competition has become increasingly cutthroat.

Now I'm not happy about that, because I'm in that small minority who use transverters, but that's the reality of the situation. To most purchasers of HF rigs, transverter capability is about as useful as tits on a boar hog. Those of us who do use transverters likely have the expertise to modify a radio to work with them in any event, so the issue is really moot.

Howdy! It's time to start thinking about severe weather in Oklahoma, Kansas, Arkansas, and Missouri. To that end, I would like to announce the creation of a new Listserv for folks who are interested in, or already participate in, the SKYWARN program in the states of Oklahoma, Kansas, Arkansas, and Missouri. One does _not_ have to be a licensed amateur radio operator to participate in SKYWARN, although "ham" radio does play a major role in getting information to and from the various National Weather Service offices.

This Listserv will _NOT_ be used for issuing any watches or warnings, but rather to discuss what SKYWARN does, information about training classes, and related matters (including discussion of ARES and REACT). Anyone is welcome to participate (subscribe), but this Listserv will concentrate on the 4 central States that make up "Tornado Alley".

To participate, contact the Administrator for the Listserv - me! :-) Send a message to   r_brown@getonthe.net and I'll send you the URL information.

Thanks, and 73 (Best Regards)!

Ray Brown, KB0STN
Assistant EC, Jasper Co, MO ARES

VHF DX'er often seem to prefer using transverters since VHF transceivers may have low dynamic range and few facilities for DX'ing. I use FT-902DM with transverters for 6m/2m/70cm/23cm and IC202 for 13/6/3cm SSB/CW.

In DUBUS info nr 2/92 (17 pages) DJ9BV writes:
Kenwood TS-850S Product Preview, bilingual article (German/English) covering the following subjects:

What I am looking for now is a 2 meter ht. Would perfer ht with accessories and in good working and cosmetic condition. Here is what I have for trade.

What I do have for trade is the following items...

NEW * Only used 1 month Connectix COLOR Camera w/software - Hooks up to your printer port.

NEW * Less than 3 months old - CCT Color Security Camera - value over $350
i can send a digital picture
of camera if interested)

NEW * Only used 2 months - Color TV Computer Card, works perfectly, used either for cable tv or your outside tv antenna * Comes with Win 3.1 and Win 95 Disk .. Cost me $250

If you would be interested in a trade, please contact via email at KC4OXP@QSL.NET

Still looking for a db 224 or db228 in the 2 meter band, for a repeater antenna.

Please e-mail responses.....oh, and if you want to sell one, but don't want to help arrange shipping, don't respond! I had several responses before like "its at the location, don't know how you would get it to a

shipper"!!

REPEATER MODIFICATIONS FOR POPULAR MOBILE RADIOS!

Information Sources has compiled an impressive collection of well written instructions for converting many popular commercial mobile radios into full repeaters. Some of the files, such as the MASTER2.TXT file (included below) which describes how to wire a Mastr II mobile radio for use without a control head, are original works and are copyrighted by Information Sources. The information may not be reproduced or republished via Internet, CD-ROM, or any other media without the express written consent of Information Sources.

The repeater modifications are available for sale on 3.5" HD floppy disk, IBM PC format only. All information files are ASCII text. The following files are currently offered on the Information Sources Repeater Modifications disk:

MICORDUP.MOD	Converting UHF MICOR mobile radio into a repeater
MICORUHF.MOD	Converting UHF MICOR mobile radio into a repeater

MICORVHF.MOD	Converting VHF MICOR mobile radio into a repeater
GE_EXEC2.MOD	Converting GE Exec II radio for repeater & 9600 pkt
GE_MVP.MOD	Converting GE Custom MVP radio into a repeater
GE_PACKET.TXT	9600 and 1200 Baud packet on GE EXEC II and MVP
GE_MVP.TXT	Basic MVP information and 1200 baud packet use
GE_MVPEX.MOD	Another 9600 mod for GE_MVP (Complicated!)
MAXTRAC.MOD	Converting the MAXTRAC for operaion on 900 ham band
MITREK.MOD	Converting MITREK mobile for 9600 duplex packet
MITREK2.MOD	Converting MITREK mobile radio into a repeater
MITREK.9K6	Converting MITREK mobile radio for 9600 packet
MASTRPRO.MOD	Using GE Master Pro receiver strips for repeaters
MASTER2.TXT	Wiring the Master II for use without Control Head
MASTER2.MOD	Converting GE MASTER 2 mobile radio into a repeater
MOTOSPKR.TXT	Adapting and wiring Motorola Amplified Speakers
WILSON.TXT	Programming Wilson/Regency synthesized mobile rigs
BR.COM	A simple DOS file viewing program for handy use
BABYRPTR.TXT	Convert a Fisher-Price baby monitor into a repeater
LIST.COM	Another easy to use file viewing utility program
PKUNZIP.EXE	Dearchiving utility program to use with *.ZIP files
PD-203.ZIP	Shareware program for POCSAG (pagers) monitoring
PE-205.ZIP	Shareware program for POCSAG encoding(transmitting)
\DECODE*.*	PD-203.ZIP file de-archived - POCSAG decoding
\ENCODE*.*	PE-205.ZIP file de-archived - POCSAG encoding

The following is a reproduction of the MASTER2.TXT file which is included on the Repeater Modifications disk described below offered by Information Sources. The MASTER2.TXT file describes how to wire the GE Mastr II mobile radio for operation without the control head and control cable.

Wiring the GE Mastr II without Control Head

I'm sure many of you out there already use Mastr IIs without control heads but there are probably many who are not too familiar with this radio. There was a recent article about using the Mastr II mobile as an emergency intermittent duty repeater by Terry W. Ellis in the September 1993 issue of Mobile Radio Technology Magazine. The article did not elaborate on wiring the Mastr II without a control head. It can be done. I will not go into the modifications needed for repeater operation. Rather, I will just explain how to wire the Mastr II radio for operation on a single frequency without the control head.

1. Ground (called A- by GE) comes out to pin 30 or pin 21 on J901 the Main control plug on the front panel of the radio.

2. 13.5 volt DC must be connected to pin 29 (called A+ by GE) and pin 24 (Ignition Switch) of J901.

3. The Tx PA supply is separately wired to the big red and black wires at pin 39 (TX+) and pin 40 (TX-) of J901.

(NOTE: Be sure to use fuses for both the PA and the low current Rx and Tx exciter even when testing and wiring on your bench. I was lucky and only smoked a few small traces on the Mastr II front panel board which I was able to bridge with new wire. The damage could have been much worse. Reverse polarity diode protection (like the PA has) would also be a good safety practice for the rest of the radio unless you like the smell of burning radio parts!) (I'd suggest 15 or 20 amp (for lower power testing) on the PA and 2 or 3 amp maximum (for testing) on the Rx and Tx exciter.)

4. The volume and squelch controls can be made with internally mounted 10k trimpots. High side on both vol and sq connect to pin 11 of J904 RX/IF/AUDIO/SQ board. (GE conveniently labels all the pins connecting the major sub-assemblies to the front panel and system board of the Mastr II.) Low side vol and sq connect to pin 12 of J904. Sq center control arm is connected to pin 10 of pin J904. Volume center control arm is connected to pin 13 of J904.

5. The frequency or channel is selected by taking the F# pin to ground. Grounding either the Tx or the Rx F# pin also grounds the corresponding F# channel on the other Tx or Rx. (I guess you could rig the radio for multi-channel use by making a multi-select switch for each channel to ground.)

6. Audio (Speaker) output is taken from J904 pin 19. Pin 18 of J904 (labeled Speaker Low) is connected to ground. Connect an appropriate loading resistor (8 to 20 ohm 1 or 2 watt minimum) to prevent audio amp oscillation if you do not have a monitor speaker connected as with packet, etc. Speaker audio could also be taken from the red test jack as explained in the next step.

7. PTT and mike connections can be taken from the red test set jack, J905. Here is the pinout:

Pin 1: Speaker high (Audio out)
Pin 2: Speaker low (ground)
Pin 3: Regulated 10 volt
Pin 4: A+ (13.5v)
Pin 5: PTT Pin
Pin 6: A- (Ground)
Pin 7: Microphone high
Pin 8: Microphone low
Pin 9: A- (Ground)

Note: The radio keys by taking pin 8 on U901 (10 volt regulator) to ground. If you operate the Mastr II WITHOUT the CHANNEL GUARD strip installed you will need to jumper pins 6 and 8 on J908, the Channel Guard plug in card. If you try to key the radio at the meter jack without the Channel Guard board installed you won't get anything except frustration. I was dumb-fuzzled for almost a week before I noticed this one little bridge on the schematic diagram of the front panel board. Lesson: If you intend to use Channel Guard keep the card installed when you test the radio. If you do not use Channel guard, jumper these two pins so the PTT will work properly from the red metering jack, J905.

To kill Channel Guard (e.g. for tuning or testing the receiver) take either Pin 6 of J901 (front panel plug) or Pin 3 of P908 (Channel Guard plug) to ground.

Having a schematic diagram for the Front Panel & System board for the Mastr II is certainly a great aid. It is very difficult to trace out the connections without a schematic since the board has circuit traces on both sides and uses a number of holes to pass circuits on both sides of the board.

I have found an easy place to drill holes for wiring access is on the black plastic front panel main wiring connector. There is an area on outer side of the two big pins to the Tx PA which can be drilled out to pass control wires. I tried to solder directly to the pins on the main connector without much success. I like the internal wiring better. (Note: Molex pins slide very nicely over the pins on the Mastr II front plug. Use heat shrink over the connectors to avoid shorts and add a neat appearance. Also, you can solder directly to the large pins for TX PA by scrapping off the plating and soldering directly to the bare brass pin.)

All the information on the disk is believed to be accurate, however some errors may inadvertently appear and the user assumes full responsibility for the use and application of all the information contained on this disk. No warranties of any sort are expressed or implied. Referral to the appropriate service manuals for the various radios discussed is certainly recommended in every case. The information on the disk presumes the user already has familiarity with the radios discussed, and hopefully, a copy of the service manuals for the radios.

In case service manuals for the radios of interest are not available to the user this distributor has prepared concise written and illustrated operating guides for the General Electric Executive II radios, Master II radios, and Custom MVP radios. Each guide runs about 20 to 25 pages in length and contains necessary schematic diagrams, exploded parts diagrams, tune-up instructions for VHF and UHF radios, and repeater modification instructions with diagrams, as needed. The guides are available for $15.00 postage paid when purchased separately, or for $12.50 when purchased with the repeater modifications disk. (See special pricing offers following the order form, below.) Much of the information on the disk is included in the GE operating guides, but the guides additionally include tune-up instructions, schematic diagrams, and additional helpful hints which are not included on the disk.

The Repeater Modifications disk is available by mail by using the order form below:

Name:_____________________________________ Callsign:______________

I read your message sometime ago and just read it again.
I am not saying that you are right or wrong but I would like to tell
you a story that happen to me.
I am guess on the time/day but I think it was the early 70's.   To a
great extend things were somewhat the same as now, just the technology
has changed.
I used to go to a club meeting and felt very much out of place. My
station was not the same as the going stations. And most of the
fellows had money to burn, I was just about fresh out of college.
One day, as I enter the club room, I decided that I was going to
change my attitude. As the members came in I greeted them, rather
than expecting them to greet me.
I found a significant change in ther attitude toward me. Soon I
became quite a respected member of the club.
I got involved in club projects and showed them my talent without
pushing me out. Plus I allowed them to show me their talent.
Even though we came from different age groups, them about 20 years
older than I, we soon got along very well.
I am now at the age where you might call me one of the old f....ts.
But I am still trying to learn from the newer groups. I do have my
opinions but i try to listen to them as well as talik to them.
Some other the younger fellows are surprised at my willingness to
still learn.
I still consider amateur raido a two way street as long as they keep
it that way.

Gentlemen:
To me you seem to be knowledgeable with good jobs. Your post can be
debated very nicely and with a measure of dignity. Why use fowl
language to put your point across? The same can be accomplished
without it. We really urge all hams on the groups to "speak" as
if we were on the ham bands. We don't want government regulations on
the internet as we have on the air with the FCC. Please do not be
offended by what I have said, for ham radio is still the best hobby
one can indulge. Thanks.

I think the HTX-212 the 45 watt mobile is junk!!

I spend over 150% of the original cost to repair the radio.

I first spend $400 Cdn to purchase that radio.

Next month it was on sale for $329, I should of waited,

The radio last 3 months before it died.

Brought it in for repairs, not worth repairing after 3 months waiting.

No problem, I got a brand new radio for replacement.

Again, this radio lasted 6 months.

Brought it in again for repairs. This time the warranty ran out. So it cost me $120 to fix.

The CPU in the PLL went. No fault of my own.

Used it on the base, afraid of getting car broken into. I notice no one could hear me on check ins. Perfect match, lots of power, but no modulation!

So after two months bring it back in again!!

Waited four months. Replace more chips, at my cost, no labour cost since under repair 90 day warranty. Cost me an other $90.

So I had it for 3 weeks now. Tested out fine.

I only used it on voice, no packet.

I listen about 200 minutes for every minute transmitted!!

My old 2nd hand Kenwood TR-7800 works great, never had a program.

Here my brand new HTX-212 spending more time in the shop that actual usage!

I have a HTX-202, works great, along with my ICOM IC-02AT which I've been using 320 days a year since 1989.

no problems with voltage, or swr. So why did the HTX-212 fail me twice?

Both radios new and only used about 3 months each time.

So next time, buy the extended warranty for Radio Shack radios.

I used my gold Visa but the warranty was only a year.

Ted Lee

VE7LEE

never again to buy a Radio Shack mobile.

--

In the time you spend browsing through five web-sites,
one person is unnecessarily killed or maimed by a
landmine that�s once every 22 minutes. These are mostly
civilians, often children, who accidentally step on a
landmine after a conflict has ended.

Sorry Ted the htx-212 was a lemon and was discontinued, although I've never heard of anyone putting this much money into repairs on one (and I should know, I'm the tech that repairs them here in Nashville)

the htx-242 is not a lemon and is quite solid. BTW it is not made by kenwood.

Greetings,

I have an ICOM IC-251A that has be tuned up ICOM. Comes with the manual, new desk microphone, and an IC-SM-5 desk microphone. Only $485 Shipped.

KENWOOD TS-520SE with hand microphone,original manual and carton. Excellent shape. Covers 10-160 meters minus WARC. Only $350 shipped.

KENWOOD TH-77A 2/440 Dual-Band Hand Held. Checked by Kenwood recently. Modified for extended transmit and recieve, aircraft/2m/440/800mhz. Includes KSC-7 Desk Charger, BT-6 Battery Case, Rechargeable Battery, orginial manual, container, and modification sheets. Shipped to your door for $295.

VHF ENGINEERING PA140/10 2 meter VHF Amplifier. Large heat sinks. No manual, obtained in a trade. Only FM mode. Shipped for $125.

KANTRONICS KAM PLUS, with Host Master II+ software, only $275 Shipped. This is my second KAM and very little use. MINT condition.

Radio Shack DSP-40 Digital Signal Processor, New in Box, Shipped for $60. One opened, used in excellent condition for $45.

TUCKER T-1000 300 watt Antenna Tuner, (same as Vectronics VC-300DLP), shipped at $120.

Looking for an HF AMP for 10-160 to include WARC/MARS. Will trade towards and depends on the model and age, include $$$ for the difference. Will consider 80A/B and Alpha amps -

Also looking for ICOM IC-706 radio with or without separation kit.

All Radio Shack radios were designed not to be modified in any way, you are out of luck there. They are very good radios by the way, I had an HTX-202 and HTX-242 and loved them. Hope that helps.

> ps i think he was talking duplex, but im not sure. DANO

Yes Dano it is as simple as a 'couple of radios' but a little deeper by the time you put it all together. First you need to know what a repeater consists of. Basically it's a reciever who's audio is sent directly to a transmitter who's frequency is 600Khz up or down the band. (assuming a 2m repeater) Old Motorola and GE tranceivers used for mobile communications weren't really trancievers but a separate transmitter and reciever in the same box, crystal controlled usually and very modular. Many repeaters were built using just one radio! The TX and RX were removed, retuned to the appropriate ham frequencys and then connected to the appropriate control logic. Some additional circuitry is required to sense when the squelch is broken on the rx, when this happens the switch is closed to key the transmitter, nevermind all the beeps, recordings, timers and digitalker identifiers these are just bells and whistles to make the repeater sound nifty. A simple repeater could be a 1/4 ground plane, duplexer, transmitter, reciever, and some VERY simple control circuit to key the transmitter and provide a timeout in the event of a transmission over 3 min long. This was basically the set up we had at the University, it provided lots of fun and the opportunity to experiment with different receivers etc. The duplexer would not be required if you could separate the transmitter from the receiver, many systems have a receive site (for 2m) the audio would then be sent out on UHF via a small 1 watt transmitter to the transmit site perhaps a mile or so away, at the transmit site there is a UHF receiver that then puts the audio into the 2m transmitter, by using this meathod you can have multiple recieve sites. Hope this gives you an idea of what its all about.

Tim

as stupid as i feel asking this, my curiousity is overwhelming. ive been told, by a ham that is helping me out with some theory questions, that a

repeater system is nothing more than a couple of radios with a few added parts in between???
is it that simple that even a newbie like me could make a repeater himself?????
ps i think he was talking duplex, but im not sure.   DANO

On this same note, I'm thinking of buying an Icom T2A, but a friend begged me to check out the Radio Shack 2M rig first (HT). It seems more expensive, bigger and with less features. Plus Radio Shack always dinks you with no accessories. The accessories usually have to be boughten later or seperately. Any ideas or thoughts?

Thanks,

John

If you do buy Radio Shak, be sure to buy the service contract. I bought an HT 3 years ago, went back for repair six times, then a month before the service contract ran out, they gave me a new rig, but wouldn't let me renew the serv. contract. Also went thru two of their spkr mikes. The real joke is I probably didn't use the stuff more than once a week, at the most. About the same time I had bought one of their 30w amps, it sizzled out two months later, they did fix that for free. Have had real good luck with their DSP. Must admit their service is great!

Beware when you buy! I surely won't waste my time or money on their stuff

RS reimburses you a price difference if within 30 days (I always buy a stuff when it's on sale. It's usual to see $100-$150 discount on certain products).

RS Canada sells a card that gives you a 10% discount on anything from regular price at $15 I think. If you buy something over $100, you will get the card free.

If something is priced $400, you will able to get it $360 instead.

Many people don't know this... just a tip from "cutie boy" :)

>Brought it in again for repairs. This time the warranty ran out. So it cost
>me $120 to fix.

>Waited four months. Replace more chips, at my cost, no labour cost since
>under repair 90 day warranty. Cost me an other $90.

>I listen about 200 minutes for every minute transmitted!!

>My old 2nd hand Kenwood TR-7800 works great, never had a program.

I realize some of the RS stuffs don't work after a couple of days. It happened to me a couple of times... but usually these things happen in first 30 days and can be replaced very easily.

Make sure you buy an extend warranty on high priced products.
My HTX-202 went to repair for a couple of times and I got a new one.
If I had no extended warranty, my HTX-202 just became a garbage (202 comes only 90 day warranty).

>Here my brand new HTX-212 spending more time in the shop that actual usage!

I am using HTX-242.   Seems it's working OK.

>I have a HTX-202, works great, along with my ICOM IC-02AT which I've been
>using 320 days a year since 1989.

>no problems with voltage, or swr.

> So why did the HTX-212 fail me twice?

you didn't have a luck.

>So next time, buy the extended warranty for Radio Shack radios.

depends on what you purchase though...

I don't buy any extended warranties on scanners...   but I do buy it
on amateur stuffs.

>never again to buy a Radio Shack mobile.

My 242 is working OK.   My 202 wasn't working OK.
kinda opposite eh ??

Try the IC-2000H. It's roughly similar, with 50W max and 60 alpha
memories. Last I heard, HRO was seeling them for $234.95.

I have one and I love it.

I have purchased a lot of things from Radio Shack and for the most part I have been
treated well. The times I have had trouble that I didn't think was fair, I
complained directly to the Brass in Fort Worth. In every case after a reaming for
being bothered by a customer that should have been taken care of locally, the store

manager in question couldn't do enough to make me happy. In one case the manager even ran from the counter when he saw me coming to open the door and give me the royal treatment. The moral to this story is TAKE the time to write a letter to the Top Brass of any company you are having trouble with. Be polite, point out the problem you are having, be specific on the solution you would like, and don't fill the letter with foul language and threats. I have found that the above advice usually produces positive results even when what I'm asking for isn't what I deserve.

It goes something like this....... No matter who makes it, every company gets a lemon or two, or perhaps a run of them, in their line up.
It happens with cars, radios, etc.

I have owned 3 RS 202's and know of others that own them , and have had little if any problems, shy of talking too much and needing to keep the B.P. charged. I'd swear by them. But at the same time, I've had others give me problems, and know of a guy who had an 2 meter mobile (not a RS) in his car, burn up. He had it wired to the battery as most often times do. The rig was only about 3 months old. He turned it and the car off, went into the Post office for a minute, came back out to the car and found smoke pouring out of the rig. The PC board had a hole the size of a 50 cent peice in it after all was said and done.

So, it's not any one brand, that has it's faults........ The ONLY RS rig that gave me a problem was the 404. I had it for a few weeks, barely used

it one hour and the audio/squelch circuit defected. They replaced the rig.
Had no problems with the new one. Over a year now.

Hi!

I just got a used 202 for $120 and am working on getting my tech or novice license...

I am an EE (EET really) and was interested if you knew about any good hardware hacks that can be
performed on this rig...?

PLease send replies to tweeks@texas.net

Thanx..

Tom D Tek

I have both a 202 and a 242.....
The 202 is GREAT.. excellent receive..
The 242 is just too dam broadband on receive...
I receive the local ambulance on the 147.165 machine here in town.. I wish the 242 was narrow band like the 202.... Also sensitivity is poor on the 144-148 mhz area... Hell I got the 3 year contract... Might as well slap it on the counter for them to look at....

All said and done the Radio Shack radios are good.. as far as I am concerned ..

I use 242 and I don't get any intermods usually...   202 doesn't also.

>I receive the local ambulance on the 147.165 machine here in town.. I wish
>the 242 was narrow band like the 202....

check your ambulance freqs to make sure that its image freq or double
or triple freq doesn't fall near 147.165.   I sometimes hear nearby
cordless phones on 147.060 which is directly coming from 49.02 MHz
cordless phone.

> Also sensitivity is poor on the
> 144-148 mhz area...

242 doesn't work well for SIMPLEX operation.

> Hell I got the 3 year contract...

I have a three year warranty too.

I have owned a RS HT-220 for years now. I prefer it over my Alinco HT most of the time.

Do not try to modify the Radio Shack HT-220. I have read too many horror stories about those who have tried.

I am a U.S. Navy Electronics Technician. I have gone over the schematics for the radio. There are no "SAFE" mods to be accomplished. I know of two people that have tried a "Safe Mod" on their radio. They both were destroyed. Radio Shack had the radio built this way on purpose.

The BEST THING YOU CAN DO about radio interference from your computer is the next time you buy ANYTHING for your computer or another computer system is to look for the FCC certification label.

Almost every computer you buy at the "local" shop that is put together there violates Federal Communications Commission regulations regarding emission of interference. If you do not have a class B certification label on the computer, it is in violation of the laws which require compliance with F.C.C. regulations.

ALL DIGITAL DEVICES sold for use in residential areas MUST be CERTIFIED to comply with CLASS B emissions requlations.

Look for the certification label BEFORE you buy. This will make more difference than all the ferrite beads and other tricks put together and be cheaper in the long run. Also, it is very difficult, but buy only high quality cables (to go to the printer and mouse and stuff) A GOOD 25 conductor RS232 cable will cost about $40 for a 12 footer. The $3 ones are going to carry the radio signals out of your computer and radiate them like an antenna.

But in reality.... put your receiving antennas as far away from you computer as you can and follow good engineering practice etc etc etc and this will drastically reduce your problem (assuming that when you move your antenna away from YOUR computer you are not moving it closer to someone else's !)

Well we certainly seem to have some opinions above but I can only
speak for myself.I got one It went on sale 299. I think ? some time
last year. I like it for the money I spent.The only problems Ive had
at all is that the frequencies that I have in memories ie local
pd,fd,a simplex and a repeater accasionally get lost. BUT this may be
something that I am doing wrong in programming. The reason I bought
this (despite that I think that rs is over priced and under featured)

is that it was cheap and repairs cant be worse than all the rest of
the radios on the market (all the time in and waiting for expensive
parts). So bottom line I lke mine Would I trade it for anything else
NO. see ya

VE3-SAK Pete

I wish it was that simple.

All digital devices INTENDED for use in residential area must be certified. if you use a device that was not intended for residential use, you are slightly screwed, and a great deal of computer equipment that is in use at home is NOT INTENDED for residential use. Only laptops are assumed to be intended for residential use, so all laptops must be class B.

Since class B is much stricter (read as more expensive to build conforming products), many PC manufacturers, especially the secondary brands, simply decide they don't intend to sell for residential use. Nothing prevents the retailer from selling them that way however.

Most large monitors are not intended for residential use, and frankly, a lot of smaller one are not intended for residential use, so they are certified to class A. I have NEVER seen a monitor certified as class A that actually met the standard, and I've been out on the test range many times.

>But in reality.... put your receiving antennas as far away from you
>computer as you can and follow good engineering practice etc etc etc and
>this will drastically reduce your problem (assuming that when you move
>your antenna away from YOUR computer you are not moving it closer to
>someone else's !)

A good idea, but some monitors produce so much noise, this is not practical. The problem is the saw tooth wave form used for horizontal output. The power involved is watts, not milliwatts or microwatts, and the nice sharp edges on the waveform push harmonics out very far into the HF spectrum. On the range I have often had no trouble finding these harmonics and measuring them at 30 meters. (100 feet). Couple with lousy shielding on the monitor case, and you have a recipe for serious HF interference.

Am looking for a repeater controller.Would need to have voice synthesizer and autopatch is not a necessary thing. Would be willing to buy if it is under 250.00 or above that price mark I would be interested in trading some gear.

Available gear:
ic 727?? i don't remember the mod # but believ that's it. it's hf + 6m
hasonly been used for maybe 20 bours at one field day about 3 years ago.

Also have dualband ht's available:
ic-w2a
standard c-528a
Both have batts, and some other misc accessories.

also have dualband commercial mobile.
alinco ald-24t
single band rx at one time. comes with tt mic.

anything interest you???? let me know. de RodEkholm Jr.

Repeater desense, what=92s the mechanism?

I want to build a small 440 MHz. repeater to be installed in a low-RF
interference site.
So I only need to worry about desense from my own transmitter.
Can anyone tell me the desense mechanism?

When I talk with the local experienced repeater builders, I hear that
the =93front-end=94
is being overloaded, with no precise explanation of what that means. =

I=92m not understanding

how -20dbm, in my case, is overloading the RF amplifier. Is there a
rule of thumb for
how much signal is too much?

If I know what I=92m looking for, I can figure out how much isolation I
need for this
particular set of equipment.

Desense, as I understand it, is the reduction I sensitivity at one
frequency caused
by RF input at another frequency. But just what is happening in the
receiver?
5 MHz away is WAY out if the second IF bandpass. Isn=92t he input signal=

is far to
small to saturate the first RF amplifier? I=92m theorizing that the
problem is
saturation somewhere in the first IF stage or second mixer.

Can anyone explain what is saturating and give tips on how to measure it
and calculate
required isolation?

Also can anyone give advice on measuring small signals in the pressence =

of large signals?
I=92m so fearful of accidentally keying the transmitter or detuning the
duplexer or creating
a spur outside the notch that I won=92t hook the spectrum analyzer
directly up to the thing.
If I put in enough attenuation to protect the mixer against full
transmitter power, I don=92t =

have enough useful dynamic range. There=92s a small limiter in the
analyzer, but that just means
that I have to replace the limiter AND the mixer. Can I build an
external limiter, with =

inexpensive and
available parts, that will protect against tens of watts at 440 Mhz?

TNX for your help, miker

You can find the 'final word' on harware hacks on the HTX-202 at www.radioshack.com.

Just to save you a short trip - the manual specificaly says, "This radio cannot be modified for expanded frequencies". I've had mine for about 3 months now - and have searched all I know to search for any mods (online and other) - so far I've found a grand total of - none (excpet the one that fries the rig).

RS does show how to setup a patch cable for a TNC at their web site.

[snip]

Desense does not have to be (and in my experience is most often not)
caused by too much signal into the front end of the receiver. Most
frequently the desense is a real signal on the receiver frequency that
is caused the the transmitter signal mixing with another signal.

The problem is that with the dynamic ranges in a repeater (+50 dBm
transmitter sharing an antenna with a -120dBm receiver) almost anything
can act like a mixer including rusty antenna hardware or a exhaust fan
on =

the neighbors house (I've seen them both and more; and yes rust can be
semiconductor). Remember, this mixer can have 150dB of conversion loss
and still cause you problems...

As for 'the other signal' all you need is a signal that is on the
split frequency, or on a harmonic of the split frequency, or any of the
dozens of mixer spur frequencies. =

> Can anyone explain what is saturating and give tips on how to measure i=
t

See above

[snip]

> Also can anyone give advice on measuring small signals in the pressence=

> of large signals?

It is very tough to measure. Best to divide and conquer. Get the radio
transmitting and receiving with seperate dummy loads. Add the duplexer
and make it work with a single dummy load with no desense. Add the
feedline.
Repeat. Add the antenna. Repeat. Add the final installation. Repeat.

Bob

You did not tell, if you had a common antenna for Rx and Tx, duplexer
type (bandpass/notch) on Rx (and Tx) and transmitter power, so I have
to guess in some points.

>So I only need to worry about desense from my own transmitter.

It depends quite a lot of the receiver design.

A typical UHF receiver has at least one RF amplifier before an active mixer. The gain from the Rx input to the mixer output might well be +20 dB, so the Tx signal leakage is now at +0dBm (provided that it has not been attenuated by any bandpass (helical) filters between the RF-amplifier and the 1st mixer. While +0dBm into 50 ohms is still only 220 mVrms, the active mixers usually operate at higher output impedance levels such as 1 kohm. +0dBm into 1 kOhm is 1Vrms or nearly 3 V peak-to-peak, which is uncomfortably close to the operating voltage of a typical front end. There are strong mixing products at fTx-fLo and fTx+fLo and if these frequencies are not terminated into a proper impedance, these can cause problems to the mixer.

A typical NBFM receiver will give a usable signal at around -120 dBm and if you try to get that sensitivity with the -20 dBm Tx leakage, you still need a 100 dB dynamic range, which is hard for an RF-amplifier. A few years ago, it was hard to get 100 dB dynamic range even with audio amplifiers with feedback.

The 100 dB difference between the weak wanted signal and the strong Tx leakage also means that the strong unwanted signal must be suppressed by more than 100 dB (relative to the wanted signal) before it hits the first stage that limits. Due to filter "leak around" it is very hard to get this kind of attenuation in a single filter even if the filter itself could attenuate that much, so a careful gain distribution must be used between multiple filters.

One thing in repeater desense cases, which is easily overlooked is the phase noise of the transmitter. If common Rx and Tx antennas are used, the phase noise of the transmitter as far out as the Rx frequency can be so strong that it swamps a weak signal. While a notch in the Rx chain tuned to the Tx frequency effectively attenuates the nominal Tx frequency to tolerable levels, it does nothing to the far out phase noise, which will penetrate into the receiver without attenuation. If the target sensitivity is -120 dBm and assuming for simplicity, that the needed signal bandwidth is 10 kHz, the phase noise density must be less than -160 dBm/Hz. If the transmitter power is 100 W or +50 dBm, the maximum phase noise density at +/- 5 MHz from the carrier must be -210 dBc/Hz. If the phase noise for a typical UHF FM transmitter at that offset is -140 dBc/Hz, the notch (tuned to the Rx frequency) in the _Tx_ to antenna line must be at least -70 dB deep.

Incidently, the notch required in the _Rx_ line is also -70 dB (from 100 W or +50 dBm to -20 dBm) so about the same amount of filtering is required in both the transmitter and receiver feeder lines. While it is important for the health of the receiver to tune properly the notch in the receiver feed, for optimum performance, the notch in the Tx feeder must also be tuned very carefully.

While the transmitter phase noise (-140 dBc/Hz) used in the example might apply for a bad synthesized FM transmitter, better far out noise performance can be obtained with crystal controlled multiplier chains. Using multiplier chains it can be easier to find suitable helical filters (at say 144 MHz) to clean up the far out phase noise. When (most of) the filtering is done in the multiplier chain or before the final amplifier at the operating frequency, small, low power filters can be used. If the notch is between the transmitter final amplifier and the antenna, RF generated at high cost are used to heat the duplexers, since the notch filters have some pass band losses at the Tx frequency.

I have had my 202 for about 3 months and then the hi/lo power switch started to get touchy! I hooked the rig up to a power meter to test the output between low and high power. There was only about a 1 - 1 1/2 watt diff between high and low. My reflected power vs. forward power was also quite high. I took the radio in last week because the switch finally gave way. I hardly ever took it off of high power, except to hook it up to one of their 30 watt amps. On that note, I think the power amp is starting to go (only 1 month old). I get a lot of AC hum and I am using a regulated power supply.

I feel that in general most of their ham radios and components are cheaply made!

But, I LOVE my pro-62 scanner!

Hello To All,

I am selling a Cushcraft 10 meter magnet mount antenna (Model CS-28M) in
Brand New Condition. I purchased this in anticipation of putting a 10 mtr
rig in my truck but the deal fell through. I have used this antenna ONCE.

HRO PRICE: $59.95
****YOUR COST $39.95*** plus shipping

Thank-you for reading my ad.

Would anyone advise me on the pin out of a GE master 2 control cable plug<at the radio>. I don't have a cable and need to know where i need to put positive and negative connections to the front of the radio as i am using an internal repeater controller <nhrc-3 mii-90> and have deleted the control head.

I realize the two large pins are + and -, but the smaller pins must have a pos and neg. pin in there somewhere.

Thanks for any help!!
please e-mail responses....

I have a mint Yaesu FL-2100b Linear Amplifier designed to match the
Yaesu Ft-101 series transceivers. Plate input: 1200 Watts PEP, 1000
Watts CW, and 600 Watts AM, Grounded Grid Class B.
Requires 110 or 220 AC currently wired for 110AC, Forced air cooling,
wt. 41 Lbs.
  Has orginal protective plastic covering the face! Tubes are 2 X 572b
triodes and are solid.
This amp is top of the line in every respect, Price is only $450.00, but
might consider a trade. I have just to much equipment and need to down
size, I have 3 amps and I can't use all of them.
Price includes orginal manual, but not shipping! Shipping is Extra!
73 & best wishes
Al

For Sale: I have two antenna tuners...

1) Dentron "Jr. Monitor" -- Compact size makes it excellent for QRP or power up to 300 watts. Covers 80 thru 10 meters. Size is about 2 x 6 x 6 inches. Looks like new with manual. Rugged design and built to last. $45 + Shipping on 3 pounds.

2) MFJ-969 Roller Inductor Tuner -- Has built-in 300 watt dummy load and antenna switch. Like new and still in the box. Excellent HF tuner!
$110 + Shipping on 6 pounds.

Thanks,

For Sale:

1) Hustler 6BTV all-band (60 thru 10 including 30M) vertical antenna. Used 1 month and then carefully disassembled and put back into original box. No damage, clean, works great. The wife just didn't like it sticking out of the ground in the back yard. $110 + Shipping.

2) Bencher BY-1 iambic CW paddle. Very good condition. $40 + Shipping.

3) MFJ-564 iambic CW paddle. Like new in original box. Chrome plated base, red paddles. $40 + Shipping.

4) MFJ-1272 MYV packet/microphone switch. This accessory allows you to have your TNC and mic hooked to the rig at the same time. A front pannel switch allows you to change between the TNC or Mic wit the push of a button. Also, the 1272 makes it easy to hook your KAM to a Yaesu without any soldering. Includes necessary cables. Like new in original box. $25 + Shipping.

5) B&W "Model 600" Grid Dip Meter. Excellent diagnostic and design tool. In very good condition. Includes coils covering broadcast to 240Mhz, wooden case, manual, spare tube. $45 + Shipping.

6) SURE 488T Noise Cancelling Microphone -- Transistorized hand mic that is FAA certified for Aircraft application (TSO-C58) Frequency response from 200 to 4 KHz. Low impedance dynamic (100 to 220 ohms) element. With Neoprene coiled cord and data sheet. Ready to be wired for your application. Used, but clean. $25 + Shipping.

7) TUBES -- Quantity of 96 tubes. 37 of them are in original tattered
JAN boxes. Numbers like: 26C6, 6CZ5, 6DJ8, 6BL8, 6B8, 12K8-Y, 12SK7,
12A6, 12SQ7, 6J5, 12SR7, 6L7, 26V6, 26A6, 26FZ6, 26D6, 6AL5, 12AU7,
6AJ5, 12SA7, 12SJ7, 12SA7Y, and one (1) 4X150D transmitter tube. All
tubes have been tested on a TV-7 military tube tester and found to be
good. All 96 tubes for $40 + Shipping

Thanks,

Steve WA9FDZ (ex WB9KEV)

Anyone know what it takes to get a TS820 AUX band position to run on 30
meters? Obviously, a crystal and I think some coils are normally missing.
?? Any help would be appreciated. TNX KB8TL pierfelice @ MCI2000 . COM

Hello!
I want to write an article about AmigaNOS and old Amiga A500 + modem
14400.This article is for Polish Amiga Magazyn. I'v got AmigaNOS but I
dont' know how to use NOS with my PPP-provider (TPSA (Poland: +48)
0202122). Have you any help about PPP and NOS and good configured
NOS-dial, NOS.rc, NOS-Startup?

How to use terminal (Ncomm, TeleTerm, Handshake) with PPP? Is it real?

Please if you can help me,
Greets from Sylwester Mielniczuk (Xyster)

Pozdrawiam!

Newsgroups: rec.ham-radio

I have a Yeasu 727 dual band. Still New in box.
I need a reset code that will do two things at once, change the
radio to wide transmit/treceice (450-470mhz) and change the
channel spacing to 12.5 khz.
The normal wide band code - 110000 will give me wide band but
leaves the channel spacing as 10 and 20 khz.
code 660100 will give me 12.5 splits but leaves me stuck in 70cm.
Any help?

DF

Has anyone built and or used the LDG Electronics Auto Antenna Tuner. Its a interseting kit for QRP and has a 100 watt version. Sure would appreciate hearing from builder or user of the LDG Electronics Auto Tuner. Saw it in QST Jan 96 and now in CQ DEC 97....

Hello,

It seems to be possible to operate the TM-733/E in Cross Band Repeat mode.
In the American (733/A) version it's only a software trick and already
installed from factory (altough not documented in the manual.) :

Cross Band Repeating (source N5LJV)

Cross band repeat isn't documented but comes ready from the factory. To enable cross band repeat from the front panel, first select a band by pressing BAND SELECT. Then, change the control to the other band by hitting [CONT SEL]. Next, press [F] for one second, then the "X" button (far right side). Decimals will appear between the Kilohertz digits, and the "ON" indicator will light momentarily. The microphone sequence to enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by turning on the radio with [LOW] pressed. They also recommend enabling the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater. For example, if you can receive a distant repeater with your HT, but have difficulty getting into it, you can use the TM-733 to boost your transmitted signal. To set this up, just omit the part where you "change the control to the other band by pressing [CONT SEL]." Doing this will setup the TM-733 to repeat your signal to the other band, but will not retransmit the distant station back to you. If this sounds ambiguous, play around with it a little

and it will begin to make sense.
(SOURCE: N5LJV)

In the European version of the 733/E we have to make a hardware modification first to get the "X" symbol on the display , and thus to put the rig in Cross Band Repeat mode !

Who can tell me more about this hardware modification ??

tnx es 73 de Dirk, PA3GWL

homebrew,rec.radio.shortwave

My R71A had power supply trouble as many have had or will. The design of the supply results in poor regulation and AC ripple on the supply output. My solution was replacing the active components with one ECG1954 low dropout 12 Volt 1Amp 3 terminal regulator. The ECG1954 requires but 13 Volts at it's input to function unlike other 3 terminal regulators that require about 16 Volts (such as the 7812). The ECG1954 is a TO220 case as was the original pass transistor Q1. Cost of the ECG1954 was $5.
Basic steps I performed:
1) Remove the regulator unit from the radio.
2) Remove the PC board / transformer from the regulator unit frame.
3) Remove everything on the PC board except
C11,L1,F4,D1,C3,C4,C5,C6,C7,C9,T1
4) Install the ECG1954 where Q1 used to reside. Note that the mica insulator is no longer necessary on the heat sink and can be removed for improved heat transfer.
5) You will have to jumper the input and output pins of the ECG1954 appropriately. Add a jumper from the cold end of the fuse to the ECG1954 input. Jumper from the ground side of C7 to the ECG1954 ground pin and jumper the ECG1954 output to the radio's DC input. I removed J2/P2 from my radio.
6) I also glued a rubber grommet on top of T1 to contact the bottom cover and reduce vibration induced in the cover from T1's field.
7) Put the radio back together.
Note that this fix may not work with other than "bare bones" R71's. Mine does not have the crystal heater, FM, remote or any other option. The radio uses almost 1 amp as is and radios with more options may require a second regulator.
How does it work? Great! Even though the radio was designed to run at 13.6 Volts, mine runs fine at 12. No hum and stable down to 105 Volts line. I also installed an International Radio (WWW.QTH.COM/INRAD) Fox-Tango CW filter at the time of this modification and I am very happy with the filter's performance.

I have a 5000 series Tektronix scope for sale. It has 6 channels, 2 beams (with independant focus and intensity for each beam), storage and a dual delayed timebase. It's in good condition. I'm asking $400 or offer. Highest reasonable offer takes it.

Alex.

I'm looking for an Allied Citizen's band radio model number 2567.
It is a 23 channel crystal-controlled radio. A large dial, loud
relay, and big S-meter are it's features.

Please send a price to the email below. I'm serious about this,
so you are not wasting your time.

David,

Re: 2567 radio

What do you need? I have a few of them stored in my pole barn for
parts....   BTW, the Cobra Cam98 is the same radio.

Hi
The extensively modified comment would really bother a pro.
Hoever, suggest you get in touch with AAVID they advertise in
QST Auth KW repair center.
You can e mail to avvid@onramp.net

as someone making my way into the word of ham radio, i've noticed a common thread betweem the type of people involved in club's,ng's, and even the crowd at hamfest's.

when a conversation is started by a newbie asking a question about anything, the initial question gets lost in the disagreement over a phrase or misquote that some "know - it - all" has to throw in. of course the person, who is asking the the question, gets forgotten about cause the rest of the answer from some person walking by is then debated for the rest of the day.

HMMMM. seems to me that anyone under 55 yrs old is more interested in "knowing more" than the guy next to him, and i find these rocket scientist to be more anoying than helpful.

if everyone was as interested in furthering their "knowledge base" and help the less experienced operators further their's, nobody would have to worry about the loss of ham bands to others.

to prove my point, i ask all of you to scan the postings of this group and see how many legit questions asking for help or opinions on equipment are responded to.

then look at all the general comments and debates posted with their responces.
in one day i saw a ratio of 10:1 in favor of the debates.

IN THE 1960'S JFK SAID " ASK NOT WHAT YOUR COUNTRY CAN DO FOR YOU, ASK WHAT YOU CAN DO FOR YOUR COUNTRY"

i'm 34, never learned that quote from school, but i practice it every day.
anyone else care to give it a try. we just might save ham radio for our children

OH8TA will activate Hailuoto island EU-126 in 6-8 February 1998. Working begins about 1600 UTC in Friday and lasts to Sunday afternoon.

We concentrate on 20m activity (SSB / CW) but work other HF/VHF/UHF bands as well. RTTY / AMTOR are possible modes too.

QSL via buro is preferred.

Team consists about 10 operators. Main antenna is ex-MF/HF marine vertical, about 20 m long. It's situated in sea shore. Linear amplifier is used in 20m / 160 m operation. If you have any questions/schedule asks don't hesitate to mail

We were working in same place in last August. Chechk www-pages (containing a lot of pictures with Finnish texts)

I use RS HTX-242.   Default: Low 10W, High 45W.   RX 137-174, TX 142.5-149.5.

It's working excellent.

I find that this radio is quite tough and this includes the microphone.

I inherited an antique Hallicrafters SX-28 "Super Skyrider" receiver. Not being a ham, I realize that I'll never use it for anything, so I've finally decided to try to find it a good home.

For the uninitiated, the SX-28 is an antique shortwave receiver with enough dials on the front to run a nuclear power plant singlehandedly, and its construction is sturdy enough to do a tank proud.

I don't know exactly how old it is, but the manual (which includes full schematics), is dated November 1, 1943. The front cover says "frequency range - .55 to 43 megacycles."

Part of the tuning knob is broken off, but the unit seems otherwise to be in excellent condition. All the dial/knob captions are like new, the glass in front of the dials is intact, and the whole case is in prime shape. My uncle must have really taken care of it; If you didn't know, you'd never guess how old it is just by looking.

I don't really know how to use an SX-28, but when I plugged it in, I heard shortwave stations, even without an antenna attached. So it looks like the electronics is all functioning.

It comes with the original manual, and the original separate speaker
and speaker cord (the speaker cord is thicker than the power cord!).

This receiver is obviously obsolete by today's standards, but it may
provide hours of fascination for the right hobbyist.

I've attached a .GIF image from my Quickcam, so you can take
a fuzzy look at it for yourself. The speaker is visible sitting on
top of the receiver.

I'm looking for $300 plus insurance and shipping from the Boston
area, but I'll listen to any reasonable offer. And you have to
promise to give it a good home :-).

Regards,
Mike Gilbert

I have a Heathkit tubetester model 17-21 in not working condition. I am
seeking schematics, user and/or service manual, to put it into workable
condition. Any help greatly appreciated. Will gladly send sase or ?
As I understand there are many close cousins of this small portable tester,
I would welcome even similar model's info. Best Regards to all.......

Send files to an ftp or web site and post the address.

A It lasts longer there than here

B It wastes space on servers all over the world

C It causes those with slow modems to spend time getting useless crap.

D it makes others think they can do it, which is NOT good!

E It can get groups dropped by sites who do not take binary groups.

Brian

Radio Scouting Switzerland Award
(interesting to work during the JOTA 18/19th Oct)

The working group "Radio Scouting Switzerland" of the Swiss Scout and Guide Movement (HB9JAM) announces the Radio Scouting Switzerland Award. The award shall stimulate the contact between Swiss and worldwide Scouts and Guides. The rules concerning the Radio Scouting Switzerland Award are:

For each band and transmission mode, a contact after 1.1.1997 with a

Swiss
� Scout or Guide scores 1 Point
� Scout or Guide radio station scores 3 Points
� association station (HB9JAM or HB4JAM) scores 5 Points.

There is no limitation in band or mode. Contacts via relay stations don�t count for this award.

For the award the following points are needed:
� DX Stations 7 Points
� EU Stations 10 Points

To order the diploma send a log, signed by a scout or a guide, and 10 SFr/ 10 US$ or 8 IRC to the Pfadibewegung Schweiz, JOTA, Speichergasse 31, Postfach, CH-3000 Bern 7, Switzerland.

!!for questions please remove the x in the E-Mail reply address!!

The 2.02 version of the WinTone DTMF Decoder is now
available. It fixes the problem with the constant Error 103
and also make tone decoding twice as accurate. Check
it out at http://www.steaksandwich.com.

55 Foot, 3 Section Heavy Duty Galvanized Crank-Up Antenna Tower.
Cable fairly new but pulleys probably need replacing. Minor surface
rust only at base. Purchased used last year but never put up. Tower
is located in Cape Coral Florida which is on the SW Coast. This tower
is approx 24' long in it's down position and weighs about 250-300
pounds. First $150.00 CASHtakes it away. Don't miss this one.
Please e-mail me with any questions you might have about this tower.

mrymer@peganet.com

Thanks,
Mike

Now that the new Drake R8B super receiver is out and it has a five
star rating from Passbook to Worldband Radio, you will see a lot of
older Drake R8's for sale.   Price will only go Down.

I just obtained a Hy-Gain DX88 10-80m vertical antenna at a local swap
meet and am getting conflicting information about this antenna. I have
been told that radials are not needed if it is mounted higher than 25
feet. I have also been told that radials are required. I plan on
mounting this antenna on a chimney mount at about 35 feet. Perhaps
someone who is familiar with this antenna can clear this up for me.
Please e-mail me at jsollows@bigfoot.com. Thanks for your help.

Call Hy-Gain!

I believe it does need radials. The only non-radial Hy-Gain is the DX-77; but then it does not cover 80/75.

Hello all!

I am seeking a copy of the Avanti 5/8 ground-plane manual or assembly diagram.

I have an old one that is in need of repair and maybe missing some pieces.

Any help would be great! Thanks in advance :-)

Well, it's official, both kenwood 3530's must go. asking $175/uship for the pair. Price has been lowered upon inspection, as one radio will need some work. BOTH RADIOS FUNCTION PROPERLY. info:
-excellent radio: first one has all buttons/lamps intact, with some case scratches, and normal mobile wear for a rig of it's age. factory mic, only oddball is someone added taller rubber feet. power cord cut rather short. good radio with a little cleanup.
-needs work: this one has been through the wringer on appearance, as the case has been painted black (decent paintjob..), has 3,4 dings, lcd lamps burnt out, needs power cord grommet, has wrong tuning knob and is missing the f.lock key altogether, and has some sloppy repair to bottom board, BUT it works really well and might make good repeater stock. no ctcss on either unit as far as I can tell. email if interested, as this seems to me to be a good deal on a couple good radios. thanks for your

time,
Randy

Due to a likely relocation out of Northern Virginia to the west coast of Florida, I am in a position to sell my home in Manassas, Va. about 30 miles west of Washington, D.C.   This home is on approx. 5 acres surrounded by tall trees and my 4 towers. The house is a low maintenance, aluminum siding house. It has 4 bedrooms, 2 1/2 baths, 2 car attached garage, 1 fireplace in the rec room a finished basement with what I think is an impressive radio room and a walk-out basement. The towers were erected here in 1989 and there are no covenants and restrictions in the neighborhood. The towers were put up after building permits were acquired. There are far too many antennas to list but I have taken much pride in building a contest quality station. One of the towers has an OSCAR satellite station with az/el rotator and the large KLM beams. The other 3 towers are 125, 135 and 150 ft. with rotatables for everything from 1296mhz to 40meters including a triple stack of 4 element 20meter beams with a switching/phasing network (Dunestar box)and assorted dipoles for the 80 and 160 band. Like antennas like I do? How about six antennas for the 6 meter band. Most all of the antennas are fed with 1/2"or 7/8" hardline up the towers. There is genuine quality and durability in the instalation of everything and YOU WILL HAVE a competitive signal on any selected band. If you are in the market for a home in the Washington, D.C. area then come to my antenna farm, a true "Ham's Nirvana". I work as a residential real estate appraiser in this

area and know what homes (even without the steel and aluminum 'clouds'
over head)are worth. I would be glad to talk to anyone serious about a
potential sale but please, please only serious inquires only. My time is
just as valuable as anyone elses and with the amount of telemarketing
going on these days, well...you get the idea. If you've always wanted to
hear what a 40 meter beam at 160ft sounded like then here's your
chance.   Maybe a once in a lifetime chance...'73.
Please call Mike (703)791-8280 or e-Mail kb4cvl@erols.com

I would like to buy an HF Rig that is small enough to be used mobile. It needs to be general coverage. I only have around $450 to $500 to spend. If you are familiar with such a rig, please email me back.

Thanks and 73s,
Eric Christensen, KF4OTN

China Ham News 10/25/97
China on EME!

BY1QH, Beijing, confirmed three 2-meter QSOs on EME on Saturday, October 18, and Sunday October 19, 1997. The Tsinghua University Amateur Radio Club station ran 200 watts into a 4x9-element Yagi antenna.

In the first EME experiment, David, BZ1BM, and Lars, SM0KAK, had hoped to work VE7BQH and W5UN from BY1QH, but failed. They did work into Europe and QSOed with three SM stations. David and Lars also heard some DL, 9K and JA amateurs on EME, and are planning their second experiment shortly.

Please direct your interest in working with China on EME to David (bzibm@wg.chnmail.com), the student president of BY1QH.

I haven't used this stuff in years and I'm cleaning out my garage. The entire box of stuff is free to the first person who comes by to pick it up. Sorry, but I don't want to separate the pieces, so it's all or nothing.

Included in the box are:

ICOM IC-720 HF transceiver
Kenwood TW-400A dual-band car-mount transceiver

Yaesu FT-208R handheld
ICOM IC-04AT handheld
Various microphones, chargers, etc.

Everything worked when I packed it away.

I am in the Almaden area of San Jose, CA. You can call me at (408) 997-8000.

_chris

CHINA HAM NEWS 10/28/97
BY1QH Special

Contributed by Lars Melin, SM0KAK
Member, Tsinghua University Amateur Radio Club, Beijing, China

Edited by Rick Niu, BD1QL
MBA '99, Columbia Business School, New York, NY
xn6@columbia.edu

* VHF DX

BY1QH is presently looking for stations who want to try 144 MHz DX, and are located less than 2,000 km away from Beijing in such DXCCs as BY, BV, VS, HL, JT, UA, and, in particular, VK6 (less than 400km from Dampier). The Dampier area is the only location to which it would be possible to make QSOs on 144 MHz using Trans-Equatorial Propagation. Stations interested in working with BY1QH on 144 MHz need to have at least one Yagi (preferably horizontally or circularly polarized), the capability to work on SSB or CW, a good take-off (low horizon) in the direction of Beijing, and a minimum output power of 50 watts.

* EME Report

In the first leg of the ARRL EME Contest, BY1QH worked SM5FRH, SM5BSZ and SM2CEW. The QSO with SM5FRH was the first EME QSO ever from China! BY1QH also heard and identified 11 more stations during the contest. Last weekend, BY1QH worked KB8RQ (first BY to North America on EME!) and W5UN. Also heard was VE7BQH.

BY1QH will participate in the second leg of the ARRL EME Contest on November 15-16. Antenna improvement is becoming urgent as it is not yet wind-proof now. In addition, the club is requesting China Radio Sports Association (CRSA) to clear the much QRMed 144.000 MHz caused by local paging system.

* Contact BY1QH

Tsinghua University Amateur Radio Club is seeking any possible assistance from the international amateur radio community, such as on EME. Please feel free to write to: David Zhang, BZ1BM (bzibm@wg.chnmail.com) or Lars Melin, SM0KAK (lars.melin@era.ericsson.se).

CHINA HAM NEWS is available for unlimited, appropriate distribution.

Hi,

After some 10 years in packet radio, I've decided to go to a "lower profile" and sell off most of my packet ports. All radios are in great shape, as they'veonly been used on packet (very low duty cycle). Some have never had a mic pluggedinto them.   All prices are firm, and do not include shipping. I stand behind allthis gear 100%. I'm an Extra class licensee, and a professional Electronics technician. I'm also an ARRL/FCC V.E. Examiner; radio amateur for 20yrs. I tell you this, so that you will have an idea as to how these items were cared for during their time with me. (non smoker) Here's the list:

Alinco DR-110T 2mtr transc. (cellular receive capable ...not modified)
$150 Yaesu FT-212RH 2mtr transc. (tone encode/decode .. very user
friendly) $175 Icom IC-281H 2mtr transc. (440 rcv. .. 9600 baud capable)
 $175 Icom IC-38A 220 mhz Xcvr. (used exclusively on packet)
     $225
Kenwd TM-733A 2mt/440 dual band (9600 baud, used on packet only) $300

Kantronics RFC 3-312 220 amp/pre-amp (30in - 120 out ... up to 150w)
$225 Cushcraft 220 (1 1/4mtr) BOOMER (15ele - 15.5db gain) $ 75

Kantronics KPC-3 512K! (I personally did the 512K mod!) $120 Kantronics
KPC-9612 (dual port 9600/1200 tnc ... 128K) $200

I have the manuals and in most cases, the original boxes, etc.

Bank certified check or Postal M.O. acceptable tender. Estimate
shipping costs at $4 to $7 for continental U.S. via UPS Ground.

If you are interested in any of the above, contact me at:
mailto:cooncat@ncweb.com

Fax: 440-428-2399
Work Phone: 440-255-1080 x883 (8am-4:30pm EST)

73 de Bill, KB8EB (packet addr. is kb8eb@wa8bxn.neoh.oh.usa.na .. but
don't know how long I'll have a presence there)

Wrong! The Yaesu FT-50RD and the VX-1R support DPL. Even the Yaesu

```
FRS radio supports DPL.  Yaesu calls it DCS, but it's the same thing.

Just so you know......DPL is only a "Digital Private Line" squelch control.
It uses a continuous digital pulse instead of a sub-audible tone to
control the audio squelch. It is NOT a audio encryption system. If you
have the capability (i.e. a Motorola repeater with DPL) you can use it on
the amateur band. You probably won't get any others using the machine
unless they have a commercial type radio and have the proper digital code
programmed for the repeater.

Yaesu has finally started to offer DPL tone on amateur equipment. I
think the only one so far though is the FT50 dual band radio.
Hopefully others will soon follow suit.

If you want a truely private repeater, DPL is, for now, the way to go.

Hi Cole and Kathy,

Yes there is a difference. If you are considering using ctcss on your machine, and it is for general amateur consumption, then the only item to use would be a conventional "PL" board. The use of a ''DPL" board would all but eliminate the use of your repeater by most individuals. There are 1000 positive and 1000 negative going "DPL" codes to choose from. Some of the newer ham rigs now are equiped with "DPL." If you don't have a real "lid" problem then your best bet is going to be the use of the former.

Cole and Kathy <kc5swi@flash.net> wrote in article
<345CE6E1.9DC4A28E@flash.net>...

> Hi all.
> I want to say up front that the help I have received has been tremendous from the news groups! THANKS!
>
> Here is another puzzling question for yall: If I want to run a "tone" <ctcss> on my converted mitrek repeater, would a DPL Motorola tone board work. I don't know the entire difference between DPL and pl tone boards. I thought the DPL board was just a programmable tone board, and would work with regular "pl" tones I associate with normal repeaters. I have been lately advised that DPL is a digital encryption of pl coding and would not work with Ham radio equipment.

Have Heathkit hw101 for sale, also hp 23 pwr. supply in other posting...
101 is in rather good cosmetic shape. Face is decent, case good, having
a few blemishes, no dents, large scratches, etc. Rig seems to be
complete, but sadly, it needs het. osc. boards..(well, not really the
boards, but the tuning slugs/cavities all seem to be cracked, split,
missing, etc). The drive control has come loose and will slide right out
(sorry, I pulled on it, was working ok!) missing one rubber foot, needs
new dial disc,  powers up ok, can hear some stations barely on 80, so it
does kinda work, has finals, etc. What's it worth? $40.00?
Reply via email,
Thanks!

Hi,

I have a Heathkit HP 23 power supply for sale. Works great, has switches for pwr off/on, dual voltage and pwr on lamp. In very good cosmetic condition as well. Only a few blemishes but has some 'labelmaker tape' identifying the voltages switch. Mostly just glue marks from tape, etc. Have 'homebrew' pwr. cord for HW 101... pretty rough and not well made, but has proper connectors. will go with first piece of equip out the door. See HW101 posting! Want both maybe?? Reasonable offers considered and uship! reply via email.
thanks,
Randy, KC8CPK

CHINA HAM NEWS 11/11/97: EME Schedule

Contributed by Lars Melin, SM0KAK
Member, Tsinghua University Amateur Radio Club, Beijing, China

Edited by Rick Niu, BD1QL
MBA '99, Columbia Business School, New York, NY
xn6@columbia.edu

BY1QH will be QRV on 144MHz EME at 1300-2300z, Saturday, November 15, 1997.

1400-1600z	CQ
1600-1700z	Listen around
1700-1900z	CQ
1900-2000z	Listen around
2000-2100z	CQ
2100-2200z	Listen around
2200-2300z	CQ

BY1QH will always call CQ on 144.120MHz, using two-minute timing, with BY1QH transmitting in the first period. BY1QH plans to stay on 144.120MHz the full even hour, and stay there longer if someone is heard at the end of the hour.

During the contest, BY1QH will be QRV on a borrowed mobile phone: (86-10) 9085-4674.

So far BY1QH has worked SM5FRH, SM5BSZ, SM2CEW, KB8RQ, and W5UN.
If you want to see some pictures taken at BY1QH just before the first leg of the ARRL EME contest, take a look at the homepage of PA3DSS: http://www.horizon.nl/~tdekkers/by1qh/index.html.

CHINA HAM NEWS is available for unlimited, appropriate distribution.

Hello all,
Who knows well the little packet modem called Baycom.
I have made 2 of them, and I wanted to know the role of the 4th inverter, whose input and output is connected on the main chip (TCM 3105 modem)
Best thanks for your help

>de KJ6WS

That's not quite right. It connects the clock output to TRS, which is not "xmit".

On the TCM3105, the mode is selected using the TXR1, TXR2 and TRS inputs. In the Baycom modem application, TXR1 and TXR2 are grounded and the clock is applied to TRS - this selects Bell 202, 1200 bps transmit and receive. The TCM3105 data sheet can be consulted for a list of the other modes available from the chip.

One other point - the Baycom modem circuit shown in the attachment only drives the CTS output at TTL level. This will give problems with the comm ports on some PCs. There is a better design which uses a PNP transistor to drive the CTS and which allows the output to swing properly negative.

Thanks for the explanation. I've often wondered what that transistor was for. (Too brain-dead to work it out for myself).

Roy, I'm am suprised that the Radio Shack employees in your neighborhood continually get away with holding those guns to your head & marching you down to the local store, in order to force you to buy those resistors or PL 259's that you would otherwise have to drive 30 miles out of the way to find or mail order them. If you detest the chain so much, then DON'T GO THERE!! Be a man of principle the next time you need to go purchase something & RS is the nearest & most convenient option-put yourself through the hardship of going through the extra inconvenience of going to a specialty store or ordering through the mail, in order to prove you are a man of your words. I find it incomprehensible that someone with such a deep seated hatred of the Tandy Corp. would even consider setting foot in a RS store, even when faced with the convenience dilemma. I'm curious what happens when you stroll into your local Food & Fuel convenience store & find out the tomatoes they peddle are not nearly as fresh as the ones at the supermarket; have you called for a boycott of them too?

As for Tandy going after usage of the word "Shack" with regards to amateur clubs/organizations/operators using it in conjunction with the hobby, I am aware of numerous local clubs who incorporate that in their slogans, and have heard nary a peep from any lawyers representing the Tandy Corporation. If it is true that Tandy has indeed registered the word "Shack" as a registered trademark (which does not seem so incredulous, as this is a nearly universal moniker for the chain store), then they have every right to go after someone who is using their registered trademark in a manner that may besmirch the name of the store. What, pray tell, is 'Bionics' Smut Shack'? I can tell you what it sounds like.......

(Title Page Description)
bianca greets you with open arms, embracing all who would come to her
Shack and
contribute their wisdom, talents and love to
bianca's growing community. Come on in!
Write on bianca's walls, read from her books.
Learn and contribute! bianca likes to
accommodate all her guests as best she can,
therefore, she has developed several
different methods by which you can tour her little
hovel.

(Disclaimer at the bottom)
this site contains adult natured content.

Whoever chose that name either intended to get a lot of hits from people who go looking for adult related material, & if you think otherwise, the you are suffering from a severe case of naivete. Do I agree that Tandy should go after Bianca & the site? Not necessarily. Do I believe that Tandy has the right to go after Bianca & the site if they feel that the use of their registered trademark is not being used in accordance to the image that they are trying to convey to people? Damn right I do.

Also, your assertion that Radio Shack does not in anyway market to amateur radio is completely baseless & devoid of fact. Radio Shack, in addition to selling the 10 meter mobile, also sells a very fine 2 meter mobile & 2 meter/70 cm HTs, and are reintroducing their dual band HT this fall. They also sell a very nice & affordable line of SW receivers & scanners, which a lot of amateurs enjoy as crossover pursuits. Are these products as good as the latest offerings from Yaesu, Icom, Drake, etc.? Nope. Are they decent products that will perform reasonably well, considering their price range & the fact that the primary market for these products is the beginning enthusiast with little time or patience for thumbing through an operator manual the size of the King James Bible? Yep.
I do not own a Radio Shack amateur/shortwave/scanner product, as I prefer to spend a little more & get something more specific & detailed to what I intend to use it for. But I have test drove a lot of the aforementioned gear, and most of them performed well with the previously mentioned considerations in mind (some, like the DX 392, a Sangean 808CS SW receiver in drag, performed just like the original, & at a much better price at the time 7/96).

As for your call for an amateur radio boycott of Tandy Corp, I believe that most fellow amateur operators, like myself, will continue to see Radio Shack as what they really are-a convenience store. If I want help with a technical problem of a nature beyond the knowledge of the amateur, I call Universal Radio, AES, Grove, EEB, HRO, etc. or visit the local specialty store (Radio City) in town, where I know that the level of technical know how & proficiency exceeds both that of most of us amateurs as well as the general retail salesperson. We've all had our bad experiences at the Shack, whether it be some 16 year old salesperson who doesn't know a balun from a keg tap, or the occasional product that doesn't seem to want to work as its makers intended. I ask you, Roy, what makes Radio Shack different, then, from the rest of the retail world? Your boycott call, folly that it is, would only serve to deprive the rest of us amateurs who do not share your agenda of an extremely useful outlet for convenient parts & products. Please carry on your personal crusade without invoking the name of the amateur community as being representative of your views.

73, Sean

Then you actually have in a sense accepted Radio Shack for what they are, a
convenience store. I have never met anyone in my many trips to RS that
pretended the store was anything else. Then why the vendetta??
> >

I believe you insinuated that they would. I myself find it hard to believe
that they would make such a blatantly hostile stink towards a large segment
of their customers. They were going after a self titled 'smut shack', not
'Ham Shack' --these are not exactly tow of the same. The people at Tandy
didn't become rich by being idiots--I find your paranoia a bit premature.
>

Well, at least we agree on something.

In a non-legal sense, I have a problem with this.

I'm still not exactly sure why, but that's your business, of course.
>
> >Also, your assertion that Radio Shack does not in anyway market to
amateur
> >radio is completely baseless & devoid of fact.
>
> This is a recent development, Mr. KC0. You havn't been a ham very
> long.

Ahhh, the favorite fall back position of the jaded & cynical amateur
operator! Of course, you realize that your assertion here means absolutely
nothing & contributes very little to the validity of your contentions....

For your information, Mr. Hradilek, I have been very active in SWL for many
years, and I have been in their store enough & received enough of their
catalogs to know that they indeed have been marketing to amateurs for quite
some time. The big hamfest in town always seems to have a Radio Shack
booth, right along with the rest of them. I think perhaps you may have
dismissed their amateur efforts out of hand for reasons you have made very
apparent in this post & the previous one.

They are merely trying to cash in on the recent boom in amateur
> activity as they did with CB in the 70's.

I'd like to think that's what businesses are supposed to do, take advantage
of opportunity when it knocks.

Tandy helped make CB what it
> became, and would love to do it again.

If there was that kind of $$$ in it again, so you & I!! These last
statements make it appear that you are more jealous of the Tandy success
story (like them or not, you must admit they've done very well for
themselves) than anything else.
>
> >Please carry on your personal crusade without invoking the name of the
> >amateur community as being representative of your views.
>
> I do strongly feel that most of the amateur community has a negative
> opinion of Radio Shack.

I & most others view them for what they are, not what we wish they would
be. I have heard some of the old time amateurs & SWLers gripe & bitch about
RS, yet I always seem to bump into them when I'm there, which leads me to
the assumption that they also have come to grips with what the store really
is. Therefore, I disagree with this statement as being rooted in extremely
unrealistic expectations.

This may have changed with all the new

> Technician licensees, but I have never worked one and therefore don't
> know.

Again, I fail to see the relevance of this & why it changes anything.

My right to post an inquiry on this forum is absolute, because
> this is the Internet. It is the Spammer's that don't belong here.

Ahh, well, we agree on two things here. Yes you do have the right to post
in this forum for discussion. yes, we both have the right to carry on a
little back & forth on this topic. Yes, spammers should die in a pool of
molten lead.

However, please state your opinions as your own, because that's what they
are (just as my opinions are mine & mine alone, & I do not pretend to
speak for anyone else.)

73 & Good DX,

Sean

Really, WOW, I was looking for one to work satellites, with a reversing
transponder that would really put a crink in my operations!

i have to make a program to control my icom transceiver with my pc

i have also a ct 17 interface unit, but i have not any specification of this unit (address port, what is the way to connect radio with pc by software ecc.)

might someome help me sending some information or to find specification and right to make a good software to connect my pc to icom transceiver with ct-17 ?

thanks in advance , max

What split is this radio on? It doesn't cover 403-512 MHz!

Salvaged the following diodes with associated markings, but can't find specs:

HI Q CK72AX 102M

FRIE CK80AW 102M 1000

M MR2901S 7426

IN3209 SI 7412

IR X5M4

Can anyone identify or give me specs i.e. Hi current, UHF.

Have old 1956 ARRL but they are not listed there either.

Thanks
Greg KB6WKW

Hello Max
Go to this URL http://www.optoelectronics.com/utility.htm
and download the APPNOTES.EXE (APPNOTES.ZIP).
In this Documentatition is a declination about the Icom CI-V
Protocoll.

I dont use the ct 17 but a MAX 232 TTL Level changer chip.
He do the same work like the ct 17 (there is a MAX 232 in it)
he change the TTL level from CI-V to the serial port RS232, and
back from the other direction too.

With the ct 17 there is nothing to program!
But with the Icom Radio you have to program the target
adress (setting by jumpers in the Radio or by frontpanel, different
by any radio. I use an IC-R10, I can use the dial to set the Adress)

Then you can program the frequency in HEX, the Mode, the squelch
the s-meter and so on.
The Data Packet to send look like this: (This is only an example.)

```
    FE FE 50 50 15 02 FD
    ^^ ^^ ^^ ^^  |  |  |
   Start  Adress |  |  |
             Comand |  |
                S-meter|
                      end

    FE FE <adress> <adress> <comand> <Data input,QRG,Mode,etc.> FD
```

In the Appnotes text you will find the whole Commands.
On this URL you will find another little Program named CI-5.exe
with this program you can test this Data packets by typing it at
the prompt. When it allright the Radio answers back to the Prompt
and change the QRG or give the S-meter back(or read the memories).

All what you need to program is a HEX code table to change the
keyboard input from dezimal to HEX and the knowledge of the
Data Packet design connected with the commands.

But the ct 17 is nothing than a "stupid" transformator from your
Serial Computer interface to the "intelligent" CI-V connection at
the radio.
I am just started with this CI-V an my MAX 232 an the IC-R10, so
I dont know all of this. But I think you will be satisfied with
the Appnotes.txt from Optoelectronics, this includes all what you
need. With this stuff I started also and get it well.

Tell me when you are get sucsess with your program, please.
I will tell you when I found out more.

73 and.....

Hi Greg:

I think the first two might be capacitors. The values being 102X10^-6. The second unit having a 1KV rating. The manufacturer is likely ERIE (not frie).

MR usually indicates Motorola Rectifier. "M" is the Motorola symbol. The 7426 and 7412 are date codes interpreted as 26th week in 1974 and 12th week in 1974.

IR was International Rectifier. The X5M4 is likely a proprietary designation.

I hope I'm not a source of too much confusion for you, Greg.

73,

Gary, K9HDU

Erie also made semiconductors back in the 60's-70's, but I couldn't
find this one on their pages in some old catalogs of that vintage.
(So did a lot of companies that don't seem to exist any more like
Hoffman, and Sakes-Tarzian).

I have several items for sale for the widow of a friend. Please contact me if you are interested in any item or the entire package. I prefer to sell as a package. All items have manuals but no original boxes. All items are clean and in good condition. I will refund your money on anything you buy and are not happy with. The shipping will be yours. All prices are plus shipping. If you think the price is too high, make me and offer, but don't wait too long or bid too low. This is all good gear and someone will pick up a bargain. I am going to do something this next week or so.

Kenwood TS-430S HF rig	$500
MJF 989B 3 KW tuner	$175
Trip Lite 40 Amp Power Supply	$100
Kenwood 241A 2 meter rig	$190

There are also filters, straight key, headset, speakers, short coax cables with ends, and some junk box materials. I want to sell all of it.

hallo,
Wie heeft er software voor de condor 16 mobilofoon.
alles is welkom
dus ook info over ombouwsetjes/basisposten en dergelijke
weet of heb je iets mail me dan.

There are a LARGE number of kit makers filling the gap these days,
including good old TEN TEC in Tennessee!

You can get a Free, HUGE list of KIT suppliers at:

http://www.mnsinc.com/bry/mega/megakits.htm

ENJOY!

Try Hands Electronics from the link on my webpage, and also Ramsey
electronics (I found them by a doing a websearch)

Good Luck!

For Sale: Pristine Condition Kenwood TS-940S
and accessories.

For sale for only $1000.00, including items listed below,
(includes a number of upgrades and accessories). One
Price for all, I'm not splitting it up!

It is 11 or 12 years old and was never used to transmit,
(because I never upgraded from my Tech. Class license).
It makes for a great short wave receiver too.

The TS-940S includes the following upgrades/accessories built in:
  Auto Tuner,
  SO-1 Temperature Compensated Crystal Osc, (Master Oscillator),
  YG-455CN-1 CW Crystal Filter,
  YK-88A-1 AM Crystal Filter,
  YK-88C-1 CW Crystal Filter,
  IF-10B Interface Kit, (Computer Control Interface),

AND IT ALSO INCLUDES the following upgrades/accessories (External):
  IF-232C Interface, (Computer Control Interface, level translator),
  MC-60A Base Station Microphone,
  SW-200 Main Station SWR/Power Meter and
  SWC-1 Inline Module, 1.8 to 150MHz, and
  SWC-2 Inline Module, 140 to 450 MHz

I'm located in West Chester, Pennsylvania, and can be reached via Email at
the following address: florczak@voicenet.com

The South Jersey Radio Association's (SJRA) hamfest is Saturday,
September 20th at the Armory on Rt 38 in Mt Holly, NJ (Burlington
County, between NJ Turnpike exits 4 and 5). There are indoor
tables with power as well as tailgating. VE testing, prizes, etc.

Talk-in is on the K2AA repeater, 145.29, -600.

More info is at the SJRA page: www.sjra.org or via email from either pehayden@aol.com or bob@waterw.com.

Subject: Need advice on repairing old FT-101
Date: 1997/09/17
Message-ID: <3420A7A2.2781@engr.sgi.com>#1/1
X-Deja-AN: 273463723
Organization: Silicon Graphics Inc., Mountain View, CA
Newsgroups: rec.radio.amateur.misc,rec.ham-radio

Hi,

I bought an old FT-101 from a guy a few years ago for $250 (who told me it was in good condition) and found that it is in bad shape recently based on the estimate from the Yaesu service center ($150parts and $250 labor).

I asked them to send it back to me with the list of fixes needed so I can do it sometime on my own. I'm not a ham yet although I'm familiar with superhet. ckts to some extent. Is there a forum for ft-101 owners on the net? Luckily I do have the user manual and the service manual so I can start from there. However it would be good to have more info.

Any advice on fixing the radio would be apreciated. I plan to buy another ft-101 type rig soon to take to India and I'd also like to know what the various versions have/ dont have and how easy they are to maintain (B, E, EE, EX, ZD). The reason I want to go for an old radio is that servicing a digital radio in India would be impossible if something went wrong.

Thanks
Ashok

P.S. I'm saddened by being taken advantage like this. Although it definitely was stupid of me to buy something I couldnt fully evaluate, I was under the impression that ham swaps were generally more ethical. Isnt that more or less true?

```

Well, hams generally are more ethical than used car salesmen or TV evangelists, but they aren't saints. And you have to learn the lingo. "Good" condition means most of the parts are still there, and that most of the smoke and water damage from the fire has been cleaned up. If you want equipment that still works, it has to be labeled as in "excellent" condition or better. But be wary, most amateurs are chronic cardboard box collectors. If they offer the radio with the original box, the thing that may be in "excellent" condition is the shipping box, not the radio.

Ok, I'm having a little fun. Sorry you were burned. My personal rule is to never expect the radio to work unless I've seen it operate under power. And I never expect a used radio to be flawless sight unseen. If the price is right, I'll buy anyway, figuring I can fix it up. That's half the fun of amateur radio anyway.

There's nothing much you *can't* fix in an old FT101. Mechanical condition is the most important thing. The condition of the electronics isn't much of a consideration. Most parts are still commonly available, and troubleshooting and replacement is straightforward. Yaesu's shop charges seem to indicate that the radio needs no more than 2.5 hours of bench time to fix, and it probably needs less than $50 in repair parts (buying parts from the radio manufacturer should always be a last resort, the markup is killer). So figuring your hobby time as free, you still got a good deal, but at $300 net instead of $250.

Hi Ashok
You may disagree with this but if you are not technically inclinde and
good at radio repair, you might reconsider and allow yeasu to repair
the radio. Granted the cost is something more than you planned but
you could also ask them to give the radio a strong going over,
cleaning etc,   Repairing a radio by remote control is very
difficult.

It has been a while since I have seen that model of radio but I think it has one or two tubes in the final and possibly a tube driver, I believe all else is solid state. Once you get that radio is good condition you should then be able to take it to India.
Also, what is the electrical power distribution in India.

Need following parts for Heath HW101:

-heterodyne osc. boards (all)
-plastic freq. readout dial (this one is cracked)
-plastic insulator for plate tuning cap. (goes between tuning rod and cap.)
will consider junker radio with all above parts working, willing to pay $30 for junker.
-
Also looking for parts for Kenwood TS-820s:
-need PLL boards (both) in working order

Need parts cheap, please email with parts list and prices.
This is not for me, but for a friend, so questions may take an extra bit of time to get answered!
Thanks,
Randy, KC8CPK

> It's a black military(?) key, large knob about 1" high, larger at the top. There is a base below the knob that is about 1" round. From the knob. the lever goes straight back for about 1.5" with a 1/4" rise. Then the lever becomes horse shoe shaped. In between the horse shoe are the adjustment screws. Behind that is a black plastic cap that covers the connectors. On the left hand side is the sequence: CJB26008A
>
> Thanks in advance for any information.

= = = = =

Bob,

Hopefully, you will also get responses from some of the other key collectors who are more knowledgeable than I am on specific variants. Your key sounds like a typical "flameproof" / "Navy" key. I have a couple of those in my collection, although at the moment it is boxed up so I am unable to check that number. The flameproof come from the contacts not showing, and the Navy (guess) from the fact that there is a base under the knob.

The other point towards the Navy is the "Contractor Code", which I learned in the July 1993 issue of the Vail Correspondent was adopted in 1916. The later codes (ca. WW-II, etc) have the CCC-#####-C pattern, with the center figure often in the 26000 range. CJB is "Contract" Jesse Bunnell, a good name in the telegraph key business. 26008-A is the more specific model and variations. //I'm wondering if this is "26003-A" with a blurred or misread "3" vs. "8" .....

There are a number of excellent WEB sites that you can find through the various search engines, plus they point to each other. Many have photos.

Try http://fhonix.metronet.com/~nmcewen/ref.html

for a starter, he has links to others. Regards, Dave K7HMP

The radio is only 4 Months old and in GREAT condition. Still have box,
cables and mounting bracket. This radio has been moded for out of band TX
and will recieve the 900 Mhz cordless/ ham band which is now blocked on
newer ft8000 and ft8100. Cellular is still blocked and I know of no mod for
this. Will recieve 110Mhz (AM) ~ 550Mhz /
750Mhz~1330Mhz.

$430.00+shipping.

When replying to this message, please send e-mail directly, BUT, you must first remove the *NOSPAN* from my e-mail address above. I'm tired of learning how to earn $50,000 in a month! :)

I need information on an Alliance HD-73. I bought one a couple weeks ago, but the previous owner was unablt to locate the paperwork. If you have a manual, I'd be glad to pay for a copy. But I really need to know a few things:

What is it worth? (Did I get ripped off?)

What are the specifications of the rotor?
Maximum weight, wind load, torque, etc.

I MAY be putting this thing under my HF antenna this weekend and would certainly appreciate it if I can avoid making a mistake.

Greg N8JMS

--
Replying to this message WILL NOT WORK. Remove "*NOSPAM*" from the address above if you wish to send e-mail.

You need the EX1961 software and OPC-478 cloning cable

Gary

I am looking for help selecting a new rig, I am just starting out in this hobby and am looking for a transeiver with 6M and 2M (any additional wouldn't hurt) or an HF w/ 6M and 2M. I am looking to spend about $1,000 for my entire setup, at the moment I am looking at the Icom IC-706MKII, it is a HF+6M+2M, a little more than I wanted to spend but will if it is all I can find.

If you can help me or give me some info (antenna info as well) please send me e-mail at: Matth@netacc.net, or at lease forward a copy to my e-mail, thanks in advance!!!

Matt

From the HD-73 Owner's Manual:

The HD-73-1 has the heaviest pitch gear teeth (steel hardened) of any rotator in its size and price range.

The HD-73-1 control unit features TWO-SPEED rotation with one five-position switch. This presents a one revolution per minute speed for rotating over an extended are and a slower speed for adjustment of, say, several degrees one way or the other for fine adjustments for the best signal on receiving and transmitting.

The rotator not only has a readily accessible externally located fuse for total unit protection, it also has an internally mounted automatic reset thermal protector for the motor and transformer against shorts or possible connection error or prolonged operation.

A large, back-illuminated 3 1/2" Jewell D'Arsonval, Taut Band, linear, full scale 100� swing, meter is calibrated in bold S-W-N-E-S as well as a degree-graduated scale.

The meter direction indicating voltage supply is solid state voltage regulated for meter indication accuracy regardless of wide line voltage or load variation; the regulating range is 105 to 129 volts.

The HD-73-1 rotor was designed to operate antennas with a maximum of 10.7 square feet of wind load area when properly installed.

Diameter of rotator unit -- 8".
Mast mounting size range -- 1-3/8" O.D. to 2-1/2" O.D.
Mounting option -- in tower (preferred), or on tower or mast.
Cable -- 6 conductor.
Voltage input -- 117 volts A.C., 60 hertz, + 12 volts.
Rotator weight (bare) -- 6-3/4 lbs.
Rotator with 1 pair antenna brackets -- 9-1/8 lbs.
Rotator with 2 pair brackets -- 11-1/2 lbs.
Shipping weight -- 17 lbs.
Rotator speed -- Dual -- 1 R.P.M. and a pinpoint slower speed.
Motor -- capacitor split phase, reversible. Motor voltage -- 20 volts A.C. No voltage on motor or leads exceeds U.L. safety limits.
Transformer, power -- Double protected -- fuse and thermal protectors.
Meter -- D.C. D'Arsonval, taut band. Meter scale -- S.W.N.E.S. and degree scale.

WIND LOAD INFORMATION

Severe installation and duty requirements are placed upon antenna rotors and supports by communication antenna arrays. The factors involved in such installations have been under investigation for many years to determine the effect of such requirements on antenna rotators, and how to design and manufacture rotators that will support and operate antennas under the very adverse conditions that exist in some localities. These locations are not only those of high wind velocity but also those of additional ice loading and severe conditions that exist during periods of blizzard and peak gusts of wind that occur in many areas.

The Unites States Weather Bureau furnished fastest mile per hour velocity figures from many recording stations around the United States. Measurements have been made of the relationship of gusts for fastest miles per hour data by the Bureau showing that gusts exceed fastest wind velocity data generally by 30%.

As a result of the above, the Electronic Industry Association (EIA) has recommended a wind loading standard of 30#/sq. ft. of projected surface for the purpose of design by United States manufacturers. This corresponds to a wind velocity of 110 mph. The use of this standard in design procedures will consistently yield products better able to withstand successfully most prevailing wind conditions in the U.S.A.

This brings us to the subject of Bending Moment, also called Side Thrust Overturning. Wind loading or wind pressure acting on an antenna, rotator and tower are essentially the same as those acting on buildings, water towers and other structures. Wind loading is by far the most critical and severe item to be considered for antennas, rotators and tower life. A typical 3 element vertical C.B. antenna creates a bending moment of 1700 lb. ft. and necessitates in-tower mounting. Other C.B. antennas are vertically polarized and can exceed these values.

The radio is only 4 Months old and in GREAT condition. Still have box, cables and mounting bracket. This radio has been moded for out of band TX and will recieve the 900 Mhz cordless/ ham band which is now blocked on newer ft8000 and ft8100. Cellular is still blocked and I know of no mod for this. Will recieve 110Mhz (AM) ~ 550Mhz /
750Mhz~1330Mhz.

Thanks Gary, but I'm looking for how to field program the radio. i.e., through the keypad, not a computer. I know for a fact that it can be done, I just don't yet know the magic code.

Thanks anyway.

Hello,

A week or two ago someone posted about common problems with a Radio Shack HTX-202 and I think one of the problems had to do with the speaker. If you have the post or know where I can get it, I would appreciate a reply.
I have audio but it is VERY low. Even if I plug a speaker mike into the plugs on top, it's a little louder but you have to hold it up to your ear to hear it. Everything else seems to work.
Any help would be appreciated.

Hello all:

We'd like to invite you to visit a couple new Web Sites, dedicated to Amateur Radio.

The first, The KB8TNQ Ultimate Amateur Radio Page! is a great source for items of Ham interest. With links to a variety of other Ham Pages, as well as a weekly update with a "Site O' the Week" and Weather-Related Sites, you'll enjoy this one.

And the second, The Central Michigan Amateur Radio Club Web Site is mostly about the club itself. However, a new page, the "Trader's Page", is something we are starting to get some interest in. If you have ham

I have a ham friend who purchased the following in March 1996 and now wants to sell as a package. IE, no piece meal.

Tri-Band Yagi (10-15-20M) 3 el., 12'	Hygain TH3JRS	$289.95
Balun 80-10m	Hygain BN-86	$ 36.95
Mast 9' Steel	Glen Martin M-1049	$ 58.95
Thrust Bearing	Glen Martin TB-25	$ 89.95
Tower 8' Roof (good for 8 Sq. Ft of ant)	Glen Martin RT-832	$229.95
Rotator (10SF)	Yaesu G-450XL	$239.95
Coax 100' RG-8 foam	Belden 8214	$ 54.95
Rotator Cable 8 cond.	Belden 8448	$ 24.95

	Cost when bought new =	$1,025.60

Wants $700 for the lot. Will give $100 discount if the buyer will help take it down.

Jerry

Yeah, but why don't you save the time and just post the site? Maybe I
just want to save the URL and look at it later.

I think he is talking about the site names in the HTML part of the message.
On the other hand, I will never understand why people use HTML in a newsgroup.

WANTED:

My father is filing a 610-V to get his original callsign back. The FCC has been dragging thier feet with this one. They tell me if it gets denied that he can re-file with some sort of proof that he once held that call. I need to get a copy of a page from a 1957 or 1958 callbook that lists:

K8BDB as Edward L. Kopp in New Philadelphia, OH. I already have a copy of him as KN8BDB, but K8BDB is the call he wants.

If it's something you can scan and send to me, that would be great. Or yo can send it via US Postal Service to:

Greg Kopp KG8O
12508 Bangor Avenue
Garfield Heights, Ohio 44125

I would be glad to pay the cost of copying and postage.

Greg KG8O

To Doctor Bob and Steve, in particular (and anyone else, in general)

If you simply click on the blue, underlined text in the message, this is a hyperlink to both sites. If you've never used one before, they're kind of cool....cuz you don't have to remember a URL, you just go.....

Hope this has been a help to the two of you. And we look forward to having you stop in soon.

7-3,
Jim KB8TNQ

Jim. I don't want to appear a pain but, there is still no URL either in
blue or any other colour.

(NOT wanting to teach you to suck eggs, but...) You must remember that
most of the users only have a 'normal' ASCCI text type of a news reader
programme. They can't read hypertext messages (Like what you are posting
in)
Many people use some form of 'Off Line Reader' (Like I do) not using
Netscrape or Microsloth Explorer and have to download every message all
in one go (mail or news)

I would like to have a look around your site, but unfortunatly it still
eludes me. (I've got an Amiga Ham site link from my site, give us a
link if you want?)

Feel free to post it here or send it to me direct. Thanks Jim.
(Post it in normal ASCCI text please!)

73 Bob G0LBQ - N6XDI.

I didn't want to mention it, but it's worth noting that a lot
of us OFs use a plain ol' Unix reader, not one of these newfangled
GUI gadgets.  ;-)  Heck, when I was a boy, I had to walk through
deep snow, 5 miles to school--and it was uphill BOTH WAYS!

:-)

It's not a big hairy deal, but the truth is, a LOT of folks
still use the primitive text-based readers we grew up with before
all the AOLers started showing up with.

BTW, that snow I had to walk through, to school?  It was in
South Louisiana--and since it practically never freezes there,
it was one UGLY snow to have to walk through!  ;-)  73!

Matt,

Welcome to the hobby!

I think that the only rig currently available that has HF, 6M, and 2M is the IC-706. There is an earlier version that is now discounted to around the kilobuck range if you can find it, or look on rec.radio.swap for a used one. I'd go for the latest one, though, and get all the fixes.

The other choice is a decent HF rig and transverters, but your budget doesn't leave much wiggle room for that route. I operate on HF with one rig, on 6M with a rig that is HF+6, and on 2 with a nice 2M rig. I've been accumulating this stuff for quite a while, though. I think the 706 is a very good choice for your needs.

Look at the weak signal portions of the VHF bands. They are a lot more fun than the repeaters.

I am awaiting a replacement manual from Yaesu for my FT-50R, I have tons of questions that I would like to ask someone that has one of these radios, i.e. how to program the darn thing!!! hi hi

Seriously, what about fm radio broadcast, i.e. 107.5 fm I can hear the station, however it sounds terrible at best, and then what about AM radio stations i.e. 750.00 ANY help would be greatly appreciated!

I am looking at options for my 1st HF rig. Cost is a high concern at this point. I am not opposed to used equipment.

I've heard that Ten-Tec makes good stuff.

I would welcome any feedback on this transceiver:

Ten-Tec Model no. 555 SCOUT TRANSCEIVER

Thanks

55 Foot, 3 Section Heavy Duty Galvanized Crank-Up Antenna Tower. Cable fairly new but pulleys probably need replacing. Minor surface rust only at base. Purchased used last year but never put up. Tower is located in Cape Coral Florida which is on the SW Coast. This tower is approx 24' long in it's down position and weighs about 250-300 pounds. First $175.00 CASH (FIRM) takes it away. Don't miss this one. Please e-mail me with any questions you might have about this tower.

mrymer@peganet.com

Thanks,
Mike

What band is your Fleetcom II on?? VHF or UHF?? I have the UHF manuals
for the 558 and 559 models....Used to work on them at a EFJ shop
15+ years ago...

I am looking for a video transmitter and receiver combination for my future R/C Aircraft. I would like to start out as inexpsensive as I can, so a black and white camera with no audio would be fine. If anyone knows of a good package deal, or offer any help on this subject I would greatly appreciate it! Thanks in advance!

The ramsey kit works well, and is an afternoon build.
I think they still have some improvements to make on
grounding and layout, but it works, it's stable, and relatively
small. Use the audio channel with a rat shack voice module
to ID, (it has standard sound subcarrier!)

Well I never!

Seeing as how the author of this posting owns the company, he would (in the famous words of Mandy Rice Davis) say that, wouldn't he!

Perhaps he suffers from schitzophrenia?

I have a dud SVGA monitor ; MAG Technology Co., Ltd, Model MX14.
It has FCC ID No: IAWMX14 and is made in Taiwan.
I'm located in England and am happy to cover all costs. I'd rather try
and repair rather than have to spend out on a replacement unit.

Hi Phil,

I work in the PC maintenance industry and most of the time, manuals for monitors are as rare as rocking horse s**t. I am afraid that it is unlikely that you will get a service manual for any specific monitor. You could try Mauritron. We repair them by guesswork, skill and knowledge of generic monitor design.

What are the symptoms, I might be able to give you some pointers...

Geoff.

I've had lots of trouble finding circuits. Some manufacturers used to include a circuit with the monitor handbook - which is usually thrown out with the original packaging by the owner!

Try looking this WEB site for lots of good info on repairs, components, other info sources:
http://www.paranoia.com/~filipg/HTML/REPAIR/

Some manufacturers (and even repair shops) now have limited service info online. Some are even searchable by monitor type and fault description. They are pretty trese though, like Dead monitor - check R234, etc. Try this one:
http://www.anatekcorp.com/monitor.htm

Some manufacturers like Zenith regard monitors as disposable items and only repair by replacement!!!!

Good luck,
Mark Harrison

Hi,
For the best deal in scanners and Amateur radio, may I suggest a visit to the Multicomm2000 web site, I have found them extreamly helpful in the past, they offer worldwide shipping of Yupiteru, AOR, Yaesu, Kenwood and Icom, to name just a few of the products that they sell, you will find them at   http://www.Multicomm2000.com

I know that their web site is not quite finished however from what I saw, they are close. They have a used equipment list that is updated every 2 days

I am sure that adding this site to your Favorate list will result in great

```
savings and on the spot information about new products as they become
available. I understand that a section containing software and shareware
will be added to their page in the near future.

Best Regards

Martyn

The Wood Cnty A.R.C. (Bowling Green, Ohio) is in need of a crystal
element for a G.E. Master Pro base unit. (440 / UHF)
This is a high tolerance crystal subset (crystal, and temperature
compensation components) that plugs into the transmitter.

If you have one (working only hi hi, ours quit) please contact me at
the following address: dicken@bgnet.bgsu.edu

Thankyou and 73 wd8icp

If memory serves, what you have are GE MSTR EXEC II series...one standard
and the other is the IMTS version....Best to use one radio as the rptr.
They are 60 watt models (the 5 in 56) and are in the 150-174 range (the 66 at the end) but they do tune to 2mtrs...
I'll see what I have in my docs on those models...

Wasn't the first unit listed an Exec I (not the Exec II) that used
tubes for the driver and final (rest of the radio is solid state)? I
used to have RG56TAS66 models on high band that were Exec I units
(from the mid to late 60s I think).

BEGIN -- Cut Here -- cut here
Am interested in an off-the-shelf software package that will do the following:

1. Receive incoming RTTY traffic (300 bps ASCII , 7 bit data, odd parity) thru one of the PC's COM ports.

2. Capture and store traffic as individual text files on the PC's hard disk. The 4N's sequence (NNNN) shall be used as EOM marker.

3. User should be able to retrieve, display and print these files according to subject, date or text search string.

4. Some selcall capability is also desired, which means that only text files that contain a user-defined text string are saved on disk, others are ignored.

Comments, remarks and suggestions welcome.
Thanks in advance.

John,

These things definately have tube finals, but the club has lots of spares and they aren't interested in replacing the rigs at this time.

The stamps on one of the boards shows a "built" date of Dec, '72, so you're in the right ballpark.

If you happen to have any of that old literature laying around, it would be greatly appreciated.

Thanks again,

Ron, N7TAW

Guess what, Martyn? I would never buy from a company whose sales representatives have such low standards that they would place poorly disguised "testamonials" when trying to sell their products. If you can't be trusted to be up-front about your affiliation with Multicomm2000, why in the world would we trust you with our money? Liars don't tend to garner much trust from the buying public. "I found them extremely helpful", indeed.

You might want to think about how easily a quick search of Dejanews shows

```
that you are actually part of Multicomm2000.

Now, please go away.

I currently have a Cushcraft Ringo Ranger II for 2 meters. I would like to TRADE this for a 440 MHz version of the same antenna.

OR ... I have a Hustler G-6 for 2 meters. I would be willing to trade the G-^ and the Ringo for a dual-band Ringo.

Please e-mail.

Hello everybody

From the week begging 7th July 1997, Cheshire Radio Scouting are helping out on PC97.

This event being held in a College in Crewe (Cheshire England) will allow many Primary Childern to experience radio, as one of the activity bases at this non curricular event.

Under the callsign GB1PC, we will be operating on the following bands /modes.

2 meters (144MHz) Voice   2 meters (144MHz) Packet

70 Centermeters (433MHz) Voice   70 Centermeters (433MHz) Packet
6mts (50MHz) Voice

If you are availble to talk to us you will be most welcome to do so.

The callsign for both voice and packet will be GB1PC and the BBS for the station wil be GB1PC@GB7SAM

Many thanks for reading this, and we hope to speak to you.

Cheshire Radio Scouing - Crest@qsl.net

I am trying to get my KAM all mode to do FSK on my Kenwood TS-450S. I wired the plug as directed to the back of the radio (the big 13 pin plug), but I have no luck getting FSK to work. PLUS, when the plug is in the radio, SSB goes to crap. There is so much garbage on my signal, you can't make out any voice, even though kenwood claims that the two are isolated.

Any help you can be in getting these two devices connected would be appreciated.

Hello everybody.

After looking at the "new" palmtops with windows CE on them I feel it is a good way of "unlocking" the computer from simple tasks as 4 people seem to want to use the computer at once at the momemt.

Anyway I was wondering if anybody knows if it is possible to use one of these to work on packet radio (specifically the HP 300/ 320LX or the cassiopiea) and what software /hardware is needed.

Many thanks in advance.

 I recommend you  go for the Psion - either the 3A or 3C. There are
plenty of packet, sat, log and other ham radio type programms for
them. They are great machines but to be fair, I am biased as I have a
3A. Go for it !!!!! :)

have you looked at the PROCOMM PLUS COMMS SOFTWARE ??

I have used this software to handle news wire text at various baud rates and to look for catch words in the file headers for saving files to disk.
The script language for programing procomm plus iseasy to use to set up the for your requirements.
I think DATASTORM is the software house that wrote procomm plus try a search on the Net.
If you require other info please e-mail me at tonyfay@indigo.ie

Barry, read it again, carefully this time. He isn't selling anything he is "interested in an off-the-shelf software package that will do the :following:" I take it he is lokking to buy something.

So....... as you say,.

"It's better that you find out now than go around thinking you have acheived something."

Steve

It has recently come to my attention that this July 4, 1997 will be the first Independence Day where a US Military band does not perform on the steps of the US Capitol.

Instead, this year, the UNITED NATIONS BAND will be performing on the steps of the United States Capitol on "Independence" Day instead of OUR US MILITARY BAND.

I guess it wont be long before we call it INTER-dependence Day, I guess that is just a technicality at this juncture.

ralph@TeamInfinity.com

If you need Congress' Email list let me know.

Below this you will find President Clinton's recent (3/7/97) Press Conference wherein he did NOT refute massive UN/International armed forces presence in US and in fact called for MORE interdependence as opposed to INDEPENDENCE. ralph@TeamInfinity.com

Do you live in Minnesota? Do you know that your government officially, through law, made you a citizen of the world? Were you asked if you wanted to be a citizen of the world? You should be honored to be among the first people in America to hold this status. I supose that now you are ready for One World Government. Congratulations.

Declaration of Interdependence (1976)
>From the Congressional Record, Vol. 122, Part 17, pp. 21076-21077
(94th Congress, 2nd Session)

THE MINNESOTA ENDORSEMENT OF THE DECLARATION OF INTERDEPENDENCE

HON. DONALD M. FRASER OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 28, 1976

Mr. FRASER. Mr. Speaker, largely through the efforts of Mr. Lynn M.Elling, the Minnesota Endorsement of the Declaration of Interdependence is a reality.

Enough publicity has attended Henry Steele Commager's effort so that it is unnecessary for me to further identify the Declaration of

Interdependence.

However, I would like to introduce the text of the declaration into the RECORD:

A DECLARATION OF INTERDEPENDENCE

(By Henry Steele Commager)

When in the course of history the threat of extinction confronts mankind, it is necessary for the people of The United States to declare their interdependence with the people of all nations and to embrace those principles and build those institutions which will enable mankind to survive and civilization to flourish.

Two centuries ago our forefathers brought forth a new nation; now we must join with others to bring forth a new world order. On this historic occasion it is proper that the American people should reaffirm those principles on which the United States of America was founded,
[brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html]
acknowledge the new crises which confront them, accept the new obligations which history imposes upon them, and set forth the causes which impel them to affirm before all peoples their commitment to a Declaration of Interdependence.

We hold these truths to be self-evident: that all men are created equal; that the inequalities and injustices which afflict so much of the human race are the product of history and society, not of God or nature; that people everywhere are entitled to the blessings of life and liberty, peace and security and the realization of their full potential; that they have an inescapable moral obligation to preserve those rights for posterity; and that to achieve these ends all the people and nations of the globe should acknowledge their interdependence and join together to dedicate their minds and their hearts to the solution of those problems which threaten their survival.

To establish a new world order of compassion, peace, justice and security, it is essential that mankind free itself from the limitations of national prejudice, and acknowledge that the forces that unite it are incomparably deeper than those that divide it--that all people are part of one global community, dependent on one body of resources, bound together by the ties of a common humanity and associated in a common adventure on the planet Earth.

Let us then join together to vindicate and realize this great truth that mankind is one, and as one will nobly save or irreparably lose the heritage of thousands of years of civilization. And let us set forth the principles which should animate and inspire us if our civilization is to survive.

We affirm that the resources of the globe are finite, not infinite, that they are the heritage of no one nation or generation, but of all peoples, nations and of posterity, and that our deepest obligation is to transmit to that posterity a planet richer in material bounty, in beauty and in delight than we found it. Narrow notions of national sovereignty must not be permitted to curtail that obligation.

We affirm that the exploitation of the poor by the rich, and the weak by the strong violates our common humanity and denies to large segments of society the blessings of life, liberty and happiness. We recognize a moral obligation to strive for a more prudent and more equitable sharing of the resources of the earth in order to ameliorate poverty, hunger and disease.

[brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html]

We affirm that the resources of nature are sufficient to nourish and sustain all the present inhabitants of the globe and that there is an obligation on every society to distribute those resources equitably, along with a corollary obligation upon every society to assure that its population does not place upon Nature a burden heavier than it can bear.

We affirm our responsibility to help create conditions which will make for peace and security and to build more effective machinery for keeping peace among the nations. Because the insensate accumulation of nuclear, chemical and biological weapons threatens the survival of Mankind we call for the immediate reduction and eventual elimination of these weapons under international supervision. We deplore the reliance on force to settle disputes between nation states and between rival groups within such states.

We affirm that the oceans are the common property of mankind whose dependence on their incomparable resources of nourishment and strength will, in the next century, become crucial for human survival, and that their exploitation should be so regulated as to serve the interests of the entire globe, and of future generations.

We affirm that pollution flows with the waters and flies with the winds, that it recognizes no boundary lines and penetrates all defenses, that it works irreparable damage alike to Nature and to mankind--threatening with extinction the life of the seas, the flora and fauna of the earth, the health of the people in cities and the countryside alike--and that it can be adequately controlled only through international cooperation.

We affirm that the exploration and utilization of outer space is a matter equally important to all the nations of the globe and that no nation can be permitted to exploit or develop the potentialities of the planetary system exclusively for its own benefit.

We affirm that the economy of all nations is a seamless web, and that no one nation can any longer effectively maintain its processes of production and monetary systems without recognizing the necessity for collaborative regulation by international authorities.

[brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html]

We affirm that in a civilized society, the institutions of science and the arts are never at war and call upon all nations to exempt these institutions from the claims of chauvinistic nationalism and to foster that great community of learning and creativity whose benign function it is to advance civilization and the health and happiness of mankind.

We affirm that a world without law is a world without order, and we call upon all nations to strengthen and to sustain the United Nations and its specialized agencies, and other institutions of world order, and to broaden the jurisdiction of the World Court, that these may preside over a reign of law that will not only end wars but end as well that mindless violence which terrorizes our society even in times of peace.

We can no longer afford to make little plans, allow ourselves to be the captives of events and forces over which we have no control, consult our fears rather than our hopes. We call upon the American people, on the threshold of the third century of their national existence, to display once again that boldness, enterprise, magnanimity and vision which enabled the founders of our Republic to bring forth a new nation and inaugurate a new era in human history.

The fate of humanity hangs in the balance. Throughout the globe, hearts and hopes wait upon us. We summon all Mankind to unite to meet the great challenge.

The Minnesota endorsement is simply that--strong support and endorsement of the Declaration of Interdependence by the political leaders of the State: the Governor and Lieutenant Governor, the majority, and minority leaders of both Houses of the State legislature and the constitutional officers of the State.

In addition, a group of Minnesotans including the chief justice of the Minnesota Supreme Court, both U.S. Senators, the leaders of both major political parties and other important citizens, commended, in a further endorsement, the State officials for lending their names to the project.

Mr. Elling has done a magnificent job. In this 200th year of our independence, the Declaration of Interdependence is an appropriate Bicentennial document, affirming, among other things, those principles upon which the United States was founded and recognizing the new crises that confront us.

The Minnesota endorsement follows:

THE MINNESOTA ENDORSEMENT OF THE DECLARATION OF INTERDEPENDENCE

Recognizing the urgent need to move ahead with this Bicentennial Project, and Further recognizing Minnesota's leadership role in promoting World Citizenship with the first State Declaration,

Be it resolved that it is appropriate and fitting for this great state to offer strong support and endorsement of This Declaration of Interdependence.

Be it further resolved that as a symbol of our support for this
[brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html]
Declaration, we continue to proudly display the United Nations flag with the United States flag at the State Capitol.

Finally, we urge the leadership of all other states to take similar action.

Effective Law Day, May 1, 1976.
Wendell R. Anderson, Governor, State of Minnesota.
Nicholas D. Coleman, Senate Majority Leader.
Robert O. Ashbach, Senate Minority Leader.
Jim Lord, State Treasurer.
Rudy Perpich, Lt. Governor.
Martin O. Sabo, Speaker of the House.
Joan Growe, Secretary of State.
Warren Spannaus, Attorney General.
Irv Anderson, House Majority Leader.
Henry J. Savelkoul, House Minority Leader.
Robert W. Mattson, State Auditor.

We, the undersigned, commend the State Officials for this endorsement of The Declaration of Interdependence. We urge other states, our nation and
[brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html]
other nations to follow this example, which is a valuable step in building a World Community of Peace Under Just Law:

Don Fraser, Member of Congress.
Charles H. Slocum, Chairman, Independent-Republicans of Minn.
Earl D. Craig, Jr., President, Mpls. Urban Coalition.
George C. Mastor, President, Minn. State Bar Assn.
T. M. Richter, President, World Federalists Assoc.
Hubert H. Humphrey, U.S. Senator.
David Roe, President, Minn. AFL-CIO.
Robert J. Sheran, Chief Justice, Minn. Supreme Court.
Jerry Jenkins, President, League of Women Voters.
John R. Roach, Archbishop of Minneapolis & St. Paul.
Walter F. Mondale, U.S. Senator.
Rick Scott, Chairman, Minn. DFL Party.
A. C. Lehman, Jr., Exec. Director, Minn. Council of Churches.
C. Peter Magrath, President, University of Minnesota.
John Edie, President, UNA of Minn.

CLINTON does NOT deny UN takeover of US in Press Conference

In fact he takes the opportunity to go into great detail about how what he is NOT denying IS in fact NECESSARY... BTW, I have just heard that FEMA troops in Kentucky and Tennessee that are assisting in the FLOOD are wearing Blue Berets similar if not identical to UN BERETS... ralph@TeamInfinity.com

From the 1997-03-07 Presidential Press Conference:

Q Sir, this is on another subject. We have a very great problem in this country today, and I wonder if you would use your leadership to counteract the rumor-mongers that are abroad in the land [brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html] who are spreading all these rumors that are scaring people to death -- large segments of our citizens believe that the United Nations is taking over whole blocks of counties in Kentucky and Tennessee.

THE PRESIDENT: Yes.

Q And some of them, they believe that --

THE PRESIDENT: Now, you all are laughing, but --

Q -- you're going to put us in a concentration camp and you're going to give our army to Russia and all that baloney. Could you do something about this? Because it's hurting the unity of the United States.

THE PRESIDENT: I don't know, because the people who believe that think I'm the problem. (Laughter.) We're all laughing about it, but there is a not insubstantial number of people who believe that there is a plan out there for world domination and I'm trying to give American sovereignty over to the U.N. There was a --I read in our local Arkansas newspaper, one of them the other day had a letter to the editor saying that, there I go again, there's Clinton out there trying to give American sovereignty over to the United Nations.

Let me just say this: For people that are worried about it, I would say, there is a serious issue here that every American has to come to grips with, including Americans that don't much think about foreign policy until some great problem occurs, and that is, how can we be an independent, sovereign nation leading the world in a world that is increasingly interdependent, that requires us to cooperate with other people and then to deal with very difficult circumstances in trying to determine how best to cooperate.

That's the issue that you will all be reporting on for the next week in the Mexico certification issue. Did I do the right thing to certify Mexico? Are the members of Congress who disagree with me right when they say we should have decertified Mexico and then give it a national interest waiver so we could continue to cooperate economically and in others ways?

I strongly believe I was right. But we don't -- if you want to go into that, we can later, but the issue is, we live in an

interdependent world. We have to cooperate with people. We're better off when we do. We're better off with NATO. We're better off with the United Nations. We're better off when these countries can work
[brought to you by:ralph@TeamInfinity.com http://TeamInfinity.com/urls.html]
together. So I just think for folks that are worried about this out in the country, they need to be thinking about how -- we're not going to give up our freedom, our independence, but we're not going to go it alone into the 21st century either. We're going to work together and we have to.

El Jeffe, El Capiton, Generalissimo Klintonista speaks out
about the US Constitution:

"When we got organized as a country and we wrote a fairly radical Constitution with a radical Bill of Rights, giving a radical amount of individual freedom to Americans ..."

"And so a lot of people say there's too much personal freedom. When personal freedom's being abused, you have to move to limit it. That's what we did in the announcement I made last weekend on the public housing projects, about how we're going to have weapon sweeps and more things like that to try to make people safer in their communities."

President Bill Clinton, 3-22-94, MTV's "Enough is Enough"

"We can't be so fixated on our desire
to preserve the rights of ordinary Americans ..."

Bill Clinton (USA TODAY, 11 March 1993, page 2A)

Why cant any of these be considered a violation of the oath of office to uphold the Constitution and qualify as TREASON !!

"Gun registration is not enough." Attorney General Janet Reno, December 10, 1993 (Associated Press)

"Waiting periods are only a step. Registration is only a step. The prohibition of private firearms is the goal." - Janet Reno

"What good does it do to ban some guns. All guns should be banned." Sen. Howard Metzanbaum

"Our task of creating a socialist America can only succeed when those who would resist us have been totally disarmed." Sara Brady, Chairman, Handgun Control, to Sen. Howard Metzanbaum, The National Educator, January 1994, Page 3.

55 Foot, 3 Section Heavy Duty Galvanized Crank-Up Antenna Tower. Cable fairly new but pulleys probably need replacing. Minor surface rust only at base. Purchased used last year but never put up. Tower is located in Cape Coral Florida which is on the SW Coast. This tower is approx 24' long in it's down position and weighs about 250-300 pounds. First $175.00 CASH (FIRM) takes it away. Don't miss this one. Please e-mail me with any questions you might have about this tower.

mrymer@peganet.com

Thanks,
Mike

Ralph,

THE UNITED NATIONS BAND ?
I didn't know that the UN has a band, well good for them.
Jack.

It's a black military(?) key, large knob about 1" high, larger at the top. There is a base below the knob that is about 1" round. From the knob. the lever goes straight back for about 1.5" with a 1/4" rise. Then the lever becomes horse shoe shaped. In between the horse shoe are the adjustment screws. Behind that is a black plastic cap that covers the connectors. On the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

I have no problem with tinkering and changing things if it will help. It's the money thing I'm talking about. Change for the sake of change is rediculous though. If it isn't broke leave it alone is how I feel. It isn't our fault the rocket isn't going up on time, why should we pay for storage (if that's the reason). More work=more money as far as the sat is concerned is a bogus excuse. Guess the volunteerizm isn't there....I have no problem with asking for donations by the way.

E-mail me at the address below, not with the above address.
That address is to help stop junk e-mail!

Legality dosen't matter. Actual performance dosen't matter. What matters is how can I impress my friends with the amount of money I dumped into this crap.

These guys buy antenna gadgets for insane prices that have absolutely no measurable effects, screw up their audio with processors and reverbs, add in a "roger beep" that's 20 dB overmod, operate on any frequency they can get their gear to run on, (remote control users.. TOO BAD!)

In actual fact, if the band is open, you can work the world with 5W (on 10 meters, where it's legal). If the band is closed, then no amount of power will help. the only use for all this junk is a nightly screaming match. Repeat

in every town out to the edge of ground wave propagation, and it's no
wonder
you can't use CB for anything useful anymore.

Back in my CB days, I used to get a lot of fun by outperforming very
expensive
base stations from a 5W mobile rig. Of course I read and understood the
ARRL antenna handbook, and actually installed my system properly..
The total cost of my antenna mod was about a nickel.

Still, they don't care what problems they cause for other users in the fire
and
police bands, ham bands, TVI.. Just as long as they can out-shout the
idiot down the street, that's what matters.

Antenna Specialists make excellent antennas.  However, 140$ does seem a
little strong!

> Obviously, since the aerial is the most important part I want to get the
> best, but I don't want some huge aerial sticking high up on my car.
> What can you suggest?
```

I would suggest something along the lines or a K40 or Wilson 1000. The quality is acceptable and you should be able to snatch one for much less than 140$.

A 102" whip mounted on one of the back corners of the truck seems to be pretty hip around these parts. however, you'll get better overall performance from a whip like the above-noted mounted in the center of your roof. For best performance, you really have to drill a hole in the roof and mount the antenna permanently. You may not like this idea but let's face it, when you go to sell the truck a small bucket of bondo and some touch up paint will completely conceal it. Either that or just shove in a hole plug and hope for a short buyer. <G>

If you are concerned with being heard, you could install an outboard power amplifier to the rig. Bear in mind this is illegal. However, the noise is often so thick on CB that you need more than 4 watts to "make the trip".

Cheers!

Hello,

Could anybody tell me if you know of any sites where there is maps within Great Britan to download into APRS or if there is anybody who has made any.

Thanks in advance for any information

I am looking for a Kenwood TS-850SAT or a HF rig somewhere in the same ballpark.. Here is what I have to trade..

I will ALSO include my NEW *7 week old * HTX-212 complete with everything including box, manual, AND 3 year extended warrenty with this deal!

Tower Case
486/33 (8 Megs Ram)
6X Speed CD Drive
16 Bit Soundcard
2.6 Gig Hardrive
(1) 1.4 Meg Disk Drive
800 Meg Tape Backup (Internal) Ditto
28.8 Modem (Internal)
SVGA (1 Meg) Video Card
FM Radio Card (FM Radio Station)
Windows 95 Installed
SVGA 13" Monitor

ALL EQUIPTMENT IS NEW 6 MONTHS AGO EXCEPT FOR THE MONITOR! I put this package together myself.

Looking to trade for a Kenwood TS-850S/AT also in good condition. I checked with HRO Atlanta, they said that it would be a perfect trade. They said $1000 for the TS-850S/AT without tuner $850.

I have about $1100 invested in my computer, and $200 invested in the 2 meter mobile.

Either E-Mail or Call! Here is the information

The first unit sounds like an older GE Exec (not the Exec II). If I recall, this radio may have tube finals. Not sure about the 2nd unit.

It's a sad thing that the once usefull and fun C.B. band has been reduced to this. It's also sad that so many people in this once great nation have lowered themselves to this point.

Count the days until FRS goes the same way. I'm sure there will be idiots trying to "shoot skip" on UHF.

Round' here, the 154 MHz VHF "dot" channels are already plagued
with "I'm stepping on you" idiots. I turned on the radio one
night and swore I was listening to CB channel 14.

It is just amazing what happens when technology is placed into
the hands of the "average" person.

Cheers,
Paul Grohe

Paul, Perhaps what is needed is a CW test to weed out the undesirables before they get a radio permit. No... wait a minute...... That has already been tried and it did not work very well. Those same idiots got by the test. Oh well.....

Watch out Andy, I gave somewhat of the same advice and was told by many do
good posters that it was illegal to run an amp. on CB.

I used to have good luck with a 5/8 wave "Firestick" top loaded coil
type- they've got them as short as 2 ft long, which work very well
even at highway speeds with a 6 inch mag mount set- can get both of
these at your friendly neighborhood truck stop for a total of about

$20! Also works great as a scanner antenna.....but not so hot on 2 M!

I wasn't one of those "do good" posters, but what's so bad about doing
good??? Why be a petty criminal? Just use your 2 meter rig and don't
worry about the CB...or do it with the legal 4 watts. No rocket science
needed here.

The best performance will be had by using a full length 1/4 wave whip (102"). They actually look OK on a pathfinder when mounted on the back bumper at one corner.

If you desire a somewhat shorter antenna, and don't mind mounting it on the roof, then a base-loaded whip will perform well. There's basically 2 kinds of these (this is oversimplified, but will give you an idea of what's important for efficiency)

1) Steel whips about 35" long. They tend to radiate mostly from the whip; the bottom loading coil is used mainly for matching.

2) Steel whips about 51" long. These usually are designed so that the coil radiates some of the signal as well as the whip. They

tend to be more efficient than the #1 type. (K40 is one of many in this class)

All bottom loaded antennas perform poorly if the coil isn't positioned so that it's free of metal obstructions.

If you want to mount a whip off the corner bumpers or side of a vehicle and don't want the size of a 9' whip, then I'd recommend using a top loaded whip (your standard 4' white truckers antenna). These antennas move the current node as far up the whip as possible which increases efficiency, and are better able to deal with unusual ground plane irregularities found when corner-mounting.

Paul

Well, I'm not saying that anyone should buy an amplifier just because damn near everyone else has one. <G>

The reality of the situation is that you need a lot of grunt just to get across the street when the noise level is high. The standard mobile install of a VHF-lo commercial two-way radio is 50Watts, with most running 80W+. For VHF it is 25Watts and UHF 25Watts as well. Most repeaters are running 50-100Watts.

If 5Watts is "good enough for anybody", I've seen no evidence of that!

Cheers!

The question pool can be a computer program. The source for the program and the data files would be available.   The program could fill in different values each time for formula questions as well as some of the ones on regulations. This would not affect the technical content of the questions, but it would prevent applicants from learning only the answers to the questions in the book.

The best you will find for a mobile whip with gain and only 4-5 feet in height is a WILSON 1000.

Have a look for it. They are made in Vegas.

Well Greg, I drive from state to state a lot and very seldom hear anyone on the 146.520 calling freq. I monitor it all the time and call out about every 50 miles or so but seldom make a contact. Sometimes its a long way between repeaters. On the other hand the CB channel 19 is always active with weather, road, and bear conditions. Also those truckers can tell some very good stories. True, there is a lot of trash in there, but sometimes you can find a real jewel amid it all. Radio is Radio regardless of frequency.

Is there any significant level of use of APRS anywhere in the UK?

Only Cheshire- during Operation Frostbite I think.

I think we should 'designate' a frequency for it - 4m might be a good candidate- or perhaps a bit of 70cm - but till we have that, it isn't going to 'catch' - if it appears on a regular channel chances are you'would have to have your radio surgically removed. Packeteers can be a touchy lot in my experience....

I'd like to get into some 'live' packet - cos the internet does what packet did so much better- and I miss the keep .675 live bragade etc...

Within a week I will be ready to purchase a HF rig. I am now wanting to discuss what goodies you have for sale.

Looking for Kenwood TS-850S/AT
TS-930S/AT
TS-940S/AT

Not looking for radios in "good" condition, want one that is in excellent condition, and has never been mobile. Please send me condition of the radio, extra's that you might have with the radio, and your asking price.

In my opinion nothing beats a 102" stainless steel whip. 16 bucks at
radio shack.

Nice to see a CBer not being knocked for a change.
I'll agree to dissagree on the mobile amp Will, my friend G3NNY and
myself run full legal in the mobile, to say we get jealous/sarcastic
comments from the megabuck base stations with a dummy load on a stick
for an antenna, is a severe under-statement. We have a much modded
BugCatcher and on 160m we can rattle most loudspeakers around the
country, even the dummyload on a stick op's with a deaf receiver.
We're trying to tell them to get their act together, and we're only
running a 13'6" whip. TopBand, a most difficult band to master!

Phil G4ZOW/Xtreme mobile. We accept no prisoners, lifes too short for
QRP!

I think it really needs a frequency on 2m. However, there's just been a
new UK 2m digital bandplan announced, perhaps it includes a specific
recommended frequency for APRS? Seeing as it is so popular in the USA,
I'm sure the RSGB will have realised that there was likely to be some
interest over here within the foreseeable future.

Hi,

Is there somebody who has the pin assignments of plug 14 of this old (at least more than 10 years) R&S receiver. The plug is normally attached to the power-supply, which I'm missing, and has two rows of pins (labeled 1-8A & B). Any description on what comes out and goes in would be great. This would help me in building my own power-supply.

a good compromise between performance and bulk would be the Wilson 1000
with 5 inch mag mount. 50-60 bucks will get you a very well performing
antenna that is not as tall as the "king" sized whip yet performs MUCH
better than the 20" loaded whip designs.

i use one with my ic 706 and have it tuned for the 10m FM RPTR section.
great results!

Shhhh. Dont tell them that its the best antenna you can buy. RS will be flooded with demands for it and the price will go up.

If Packet nodes and BBS's sent their position in the Beacon Text as
suggested by the author of APRS, then a cheap and cheerful means of
frequency planning/ node activity monitoring would be avaliable.

Its dead easy to set up the text string in your Beacon text, you can
also inclued details of your o/p pwr, ant height, etc so that anyone
monitoring using APRS could see the effective range of a station, Node,
etc.

You don't need a copy of APRS to send your positional data, just to
monitor other stations would a copy be required.

I agree. But users are discouraged from setting beacons round 'year because of bandwidth. I can't see these folk turning anything other than purple at this (IMO most excellent) idea.

About using CB antennas on a 2-M rig; there is a 2-M strip-line filter in the ARRL Handbook that I made one of, and it matches 2-M to CB antennas like crazy!

A foot of 1/2" copper tube and a var cap and a couple 50-ohm connectors and a 2" X 2" X 14" box, and a bit of patience is all it took.

Try it, you'll like it.

I agree with Michael on these points (sound of MD fainting from
shock :-). I believe that whatever one does to foster their
communications skills will, in the end, be beneficial for
emergency communications. That can include DX hunting,
contesting or just plain daily or frequent communications...as
long as proper procedures are used.

Because at this point in time, the 20 wpm test is the other requirement
necessary to achieve the goal. Its that simple. Someday things may be
different, but not today. Congratulations on your Extra written!

> into a flame war?

I'm glad you favor modernization, Glen, I really am ... it's just that
I'm so DAMNED tired of all the lame excuses for maintaining something
that's nothing more than a quasi-religious fraternity hazing ritual that
when I see another ridiculous comparison/excuse it sometimes sets
me off ...

> This CW argument has been raging for a couple of decades, at least,
> and all the rational arguments on both sides have long since been
> exhausted. All I see now is boring replays of the same silly crap

The attitude is a result of nearly 25 years of putting up with this code
crap ... and the lousy attitudes of the "superior" hams who beep. Sorry
for taking it out on you ... I've just sort of reached the "mad as hell and
not going to take it any more" point ...

If the person's interest is in designing equipment, modulation and
coding techniques, and protocols to combat the channel impairments
of the HF channel, access to that channel is ESSENTIAL for testing,
experimentation, and characterizing the behavior of a system. There
is no other way, short of a full-blown hardware channel simulator, which
would cost a minimum of tens of thousands of dollars to build and take
a tremendous effort to test, calibrate, and validate ...

How do you know that? Do you have detailed statistics on how many
people have tried and failed over the decades? The existing community's
experience is self-selected for those with inherent Morse talent/ability.

>his answer sounds awfully selfish.

So? What is wrong with selfish? It is an avocation and anyone who
chooses such an activity for their spare time that is not doing so
for both personal benefit (enjoyment, relaxation, and utility) *and*
self-satisfaction (through contributing in a meaningful way) has
psychological problems.

You also have a really poor idea of how technical development is done
and how long it takes; particularly with people who are doing it on
their own time. Think of these factors, multiple design iterations,
late midnight sessions, spur of the moment ideas and inspirations, tweak
and re-tweak opeating parameters, operations under varying conditions
to confirm robustness, etc, etc. This doesn't happen in one weekend
session; this takes weeks or months, even sometimes years, of repeated
activity. There is no good reason why a person who is competent to
perform these operations should have to go on a continuing basis to
Cecil for to act as control operator or just deliver it to Cecil and
then go away without any further benefit.

Also, no matter how much he considers Cecil a friend, and vice versa,
no good friend asks another friend to do something for weeks and
months at a time that doesn't also help that other friend in some
way also. Your friend might help work on your car some weekend, but
would you ask him to help you on a complete car restoration from the
ground up without establishing *any* understanding of mutual benefit?

>Second, he can reap benefits, by operating under your license, with
>certain restrictions.

That you could expect someone to be capable and willing to develop a new design or technique, and then require him to go to someone else for permission and supervision *every* time they feel an urge to use it is ridiculous and asinine. This is even more asinine in that it is possible that the technique involves some RF engineering that Cecil, the logic designer, might have to struggle to understand (sorry Cecil, just trying to make a point :-))! This is a strawman set up by you to let you write this off with an easy conscience. The fact is that no rational person would operate under these conditions and there is no good reason for him to have to do so.

There's nothing lame about it. It's a valid point in refuting your
claim. If a person enjoys designing radio projects, it's unlikely
that lack of direct access to the HF bands will prevent that
enjoyment.

>> It's merely a matter of a few weeks
>> or months of practice and most anyone can get on HF.
>
>Or "merely" years and years of failure to get to 13wpm. Then the indignity

Such cases, while they probably do exist, are so rare as to be
statistically irrelevant to the discussion of Morse testing.

>of a medical waiver when there's absolutely nothing wrong with the person.
>IMO, Just another form of hazing/discrimination to make some inferior folk
>feel superior to someone who is, in reality, superior to them in all ways
>except wetware modeming. IMO, one way to achieve superiority is to tear the
>other person down and that's exactly what the CW testing requirement does.

All this insulting and exaggeration isn't doing the no-code defenders
any more good than similar behavior does for the pro-coders.

The fact of the matter is that the CW requirements are mostly a red
herring, detracting us from the REAL problems facing ham radio. If
you eliminated ALL code requirements tomorrow, ham radio would have a
nice little temporary increase in its ranks, and then fall back into
the same old no/slow growth pattern we had now. This is exactly what
happened when the no-code Tech began. That change was going to save
ham radio, and attract all sorts of tech types into the hobby. Well,
it did attract a few of them, but mostly what it got was families who
want to keep in touch with each other on two meters. Not a thing
wrong with that, but there are increasing numbers of other options for
that group.

Ah, insults -- the stock refuge of those who have no logical arguments. The really sad thing is that I generally support the elimination or relaxation of the CW requirements, but attitudes such as yours make it extremely difficult to defend that position. I've sat here and watched you insult poster after poster, and just shook my head. You have enough intelligence and literacy to make your points without resorting to insults. What's to be gained by turning this into a flame war?

This CW argument has been raging for a couple of decades, at least, and all the rational arguments on both sides have long since been exhausted. All I see now is boring replays of the same silly crap from both sides, complete with personal insults and invective, of course.

And then we wonder why hams have such a bad name, and why the hobby is dying on the vine. Your attitude is part of the problem, Carl, not part of the solution.

Glen, if you really believe that, I feel sorry that you are so out of touch with reality. The great majority of people love their hobbies. The great majority of people do not love their jobs and some hate them. (IMHO, you don't believe it at all and just lacked anything rational with which to respond).

Ok then explain to me why I MUST pass a 20 wpm code test in order to operate SSB [or other data computer modes] in the HF bands as an Extra Class ham? [I am a Tech Plus who has now passed my Extra Class written exam.]

If you can not answer that question with a logical answer than i fully expect cw testing (for hams) to be removed by the ITU in 1999.

No Cecil ... I believe that many beepers (note I said "many" Hans,
not "all") would prefer to retain the terminology that they currently
associate with no-code techs and coded hams ... that would be
"sub-human scum" and "lords high exalted rulers of the realm" ...

I know *you* were joking, but that view is all to common and we
need to stamp it out ...

> "official" reading on this?

I have no idea on what's "official" ... but I think field day, SET, etc.
are some of the possible practice opportunities for operating under
emergency power, with pre-prepared gear, and simulating some form
of emergency exercise. Field day is more of a contest/game and
doesn't have any value as a practice exercise beyond setting up
temporary antenna systems, generators, etc. but even that has
some value.

The Morse position at the field day site may rack up a lot
of contest points (I believe it gets a handicap to boost its
score) but it has virtually no relation to any real-life emergency
operation ... it's just another CW contest for the gamers ...

In summary, yes, emergency communications is supposed
to be a big part of ham radio .. but Morse has nothing to do
with it in the real world and the contest-like aspects of field
day have little relation to emergency communications either.

We should practice, practice more, and practice more realisticly
for emergency communications ...

Hi Carl,

This is where we differ. I think that anyone can learn code, just as you think anyone can learn theory. You have stated many times that its just a simple encryption of the alphabet. So, why can't someone as intelligent as an EE's (no sarcasm intended, I sure can't do what they do) learn this simple encryption to advance within their chosen hobby? This is the fundamental difference in our opinions. I do agree a good first step to resolution would be to drop the worthless "question pool" and replace it with valid theory testing. But as long as code remains as widely used as it is today, I can't see just dropping it. Yes, I do have an Extra class but I don't for one second think that it in any way gives me, or any one else that has one, some kind of "status". Its just the next license up from where I was and "because it was there" I got it. A ham is a ham. From Novice to Extra class, were all the same. The idea that dropping the code test will cause a massive influx into the hobby was disproved with the no-code tech license. We got some good people, but it was not the flood that the no-code side predicted and we still have slow growth. So I guess what needs to happen is some REAL debate over what we should to resolve the problem of slow growth. Fighting among ourselves sure won't do it. I'm trying from my end. I'm a VE and teach code and theory classes when I can. I'm open to NEW ideas gang! Lets start kicking some ideas around instead of each other. What do you say?

73,
K4XA
Graham

It isn't a question of learning the code for most people (though it may be for some). It is a question of being able to develop FAST ENOUGH conditioned reflexes and FAST ENOUGH handwriting to copy at the required speed.

How would you like to have only a fraction of a second to do each of the calculations in a (randomized) written test?

In the FASC report, it also recommends exams 'that reflect a
basic knowledge of all modes, operating practices and operational ethics.'
No mention of theory at all.

Apparently, the RAC FASC saw no need for either theory or CW testing.
Incidently, the FASC report was accepted by the RAC executive. RAC did not
claim that this report and its acceptance were sanctioned by Canadian amateurs.

How do you know it isn't?  Do YOU have any such stats?  A gratuitous
claim can be refuted by an equally gratuitous rebuttal.  It's up to
the original party to show that a significant number of people cannot
pass a code test after "years of failure."  Besides, for the purposes
of this silly argument, a 5WPM test is sufficient, and I maintain that
is a relatively trivial task.

I have plenty of anecdotal evidence of people who have overcome
serious handicaps to get a ham license, even back in the days when
there were no legitimate no-code hams, and passing the CW tests was
far more difficult than it is nowadays.  Code is hard for most people.
It was hard for me.  For some it's harder.  Same with the theory test.
You either deal with it, or you do something else.  Whining won't help
a bit.

>people have tried and failed over the decades?  The existing community's
>experience is self-selected for those with inherent Morse talent/ability.

That's baloney.  I have no "inherent Morse talent/ability," and yet  I
have an Extra Class ticket.  I didn't need the privileges.  I just did
it for the same reason people climb mountains; "because it was there."
Most of the hams I know never use code.  Many of them have no-code
tickets.  Quite a few others cheated on the tests and couldn't send
their own call in CW.  I see no evidence that your statement is valid,
particularly in recent years.  Back when CW was the major method of
ham comms, then it may have been true.

No, it isn't. It's not the best analogy I could have chosen, but the
point is still valid. I notice you don't try to defend the REAL
insults in your post, however. I refer to the comments about "clue
rental" and a comparison to another poster which gives you a nice "two
insults for the price of one."

>The attitude is a result of nearly 25 years of putting up with this code
>crap ... and the lousy attitudes of the "superior" hams who beep. Sorry

The attitudes of one side are no better or worse than the attitudes on
the other. Also, it's a mistake to categorize the attitude of
everyone involved by the excesses of a few vocal advocates.

>for taking it out on you ... I've just sort of reached the "mad as hell and
>not going to take it any more" point ...

Oh, I see. And so jumping down the throats of potential allies and
possibly antagonizing neutral lurkers is somehow going to help your
cause? I fail to see how your tactics are doing your case any good
whatsoever.

Sounds good to me, Graham. Anything's better than continuing the
endless, boring debate/whinefest/flamewar over code testing.

Apples and oranges, Andy. But just to have a new idea out in cyber-ham
land, what if the speed required was lowered?

And some of us found the theory side just as hard. I am one of those people. I could have just memorized questions and answers, but to me thats worthless. This is also why I'm in favor of dumping the "question pool" and giving real theory exams. However, I worked hard on something that I was slow to understand and did not enjoy. Not to say the 20 WPM was easy! I just did not have to work as hard on that because I used it almost every day. Thats what it takes. The reward was my Extra ticket. I'm sorry Cecil, I just don't buy this argument. I have seen too many people do it to believe that its that big an obstacle to overcome. Also, how would you feel about a reduction in the speed required at different levels? Just trying new ideas out. What do you think?

Well, since I can copy 15wpm with no sweat, I suggest 10wpm for general
and 15wpm for extra. ;-)

Graham ... as I said in my pervious response ... I'm not (and I don't think other code-test-elimination proponents are) saying "theory is easy" or "anyone can learn the theory" (though I believe *most* can ...)

It's a question of what's a necessary, compelling requirement ... and theory is undeniably a valid, compelling requirement in a technical service ... while Morse is long outdated, abandoned in virtually every other service, and just a recreational prefrence unrelated to the government's legitimate regulatory purposes ... one could even argue legitimately (and I do) that continued Morse testing is COUNTER to the government's interest in an expanding, progressive ARS that meets the objectives of 97.1 and "pays its way" in return for its bands.

> Hi Carl,
>
> This is where we differ. I think that anyone can learn code, just as you think anyone can learn theory.

I don't believe that "anyone can learn theory" any more than I believe that "anyone can learn code" ... I never said EITHER of those things ... I will readily admit that there are likely a small percentage of people who are simply not intelligent enough to grasp even the basic level of theory that is necessary to qualify one for a ham license ... THAT'S NOT THE POINT.

The point is that Morse is not a relevant or necessary for the government to make it a license requirement ... the basic theory knowledge IS ... because of the technical nature of what the license permits. (despite the ridiculous arguments to the contrary by folks like "put in a box and ship it to Yaesu MD"

> You have stated many times that its just a simple encryption of the alphabet. So, why can't someone as intelligent as an EE's (no sarcasm intended, I sure can't do what they do) learn this simple encryption to advance within their chosen hobby?

While I would maintain that the inate ability (musical, tonal, timing, and other neurological concerns of a hereditary nature, etc.) to learn Morse is HIGHLY variable, it is probably true that the number of folks who cannot learn Morse *no matter how hard or long they try* is probably fairly small ... this is irrelevant ... the point is that Morse is simply not a compelling requirement for access to the HF spectrum (or any other spectrum) and therefore should not BE a requirement ...

> This is the fundamental difference in our opinions. I do agree a good first step to resolution would be to drop the worthless "question pool" and replace it with valid theory testing.

I have steadfastly supported improvements in the theory test and the test methodology ...

> But as long as code remains as widely used as it is today, I can't see just dropping it.

It should not be a popularity contest, particularly one restricted to incumbents ... that's like asking the few rich people in the world if they'd like to share their wealth with the working folks ...

> Yes, I do have an Extra class but I don't for one second think that it in any way gives me, or any one else that has one, some kind of "status". Its just the next license up from where I was and "because it was there" I got it. A ham is a ham. From Novice to Extra class, were all the same.

I'm glad that you're not professing the egomanical sort of "superiority" that some fanatical beepers profess ...

> The idea that dropping the code test will cause a massive influx into the hobby was disproved with the no-code tech license. We got some good people, but it was not the flood that the no-code side predicted and we still have slow growth.

The growth was significant, and even after the "initial rush" the current numbers and growth are MUCH better than they were before ... and the current no-code class is still no the draw that "true ham status" (including HF without discrimination on the basis of the "beeo/no-beep" question) would be ... I'll bet that if you offered free lobster dinners at a nice restaurant in "the best part of town" you'd get more takers than if you offered a day-old burger at some cockroach-infested greasy spoon in the "bad neighborhood."

> So I guess what needs to happen is some REAL debate over what we should to resolve the problem of slow growth. Fighting among ourselves sure won't do it. I'm trying from my end. I'm a VE and teach code and theory classes when I can. I'm open to NEW ideas gang! Lets start kicking some ideas around instead of each other. What do you say?

I said quite a bit right here ... I "kick" when I start to hear the same old, tired excuses for proping up the Morse hazing ritual ... if you want to debate modernization and the future of ham radio without the quasi-religious Morse dogma, I'll be happy to do so ... but dogma are like hot-dogs ... I like 'em well-toasted ...

The proposal for restructuring that we've been debating lately contemplates
two license classes, both with access to all HF bands, all modes, with only
a 5 wpm code test. The "higher" class would be allowed full power, to be a
VE, etc. and the "lower" class would have a power limit of say 50-250W on
HF and say 50W on the higher bands where biological safety concerns would
be more pronounced ...

It was also proposed that when the ITU treaty requirement changes, that all
Morse testing would cease ... those who wish to use Morse would still be able

```
to
and if they feel a need for a piece of paper that says they are proficient at
some
particular speed, they would find the ARRL happy, I am sure, to sell them one
for a nominal fee ...

More MD distortion ... exams "that reflect a basic knowledge of all modes ..."
sure sounds like a theory test to me ... and I'll bet it sounds like a theory
test to most rational readers, too ...

> Apparently,  the RAC FASC saw no need for either theory or CW testing.
```

More MD strawmen ...

> Incidently, the FASC report was accepted by the RAC executive. RAC did not

amateurs.

At least the Canadians elected leaders with the cajones to do what's right
even if it's not the popular whim of the mob ... though I suspect most
Canadians
are more sensible than MD would imply ...

Hi Carl,

Well, its a start to a new debate but........... How are we going to
regulate it? I don't think anybody would stick to the power limit.

Graham

If we assume that the FCC is peramanently out of the exam business, how
could we devise an exam system that would be reasonably consistent
without a question pool? I do not ask this to be argumentative, but

hoping that some good ideas will come out of the ensuing discussion.

(I can do no more or less with the good ideas than you can; I work in the
Lab here, so I can't be a member of the ARRL Board of Directors; we have
a policy that no Director can have a finanical stake in amateur radio, so
I would be disqualified.)

(But, "Director Hare ..." wouldn't that strike fear into their hearts?
:-))

In Finland the power limit on HF for the entry level Basic/Novice license is 120 W and within that limit, you can use most of the rigs on the market, since almost all are in the "100 W" range. To get up to the General class power limit (1000 W) you are going to need an external linear amplifier. I have heard of very few novices buying or owning such devices, so it not a big problem over here. The important thing is that the power difference between the classes is large enough and that the higher limit requires an investment (external amplifier) that is not needed or of any use at the lower class.

Why do you say that ... there doesn't seem to have been a problem with
novice/tech+ ops using big PAs ... a power limit is justifiable on the basis
that the test doesn't require as much demonstration of technical savy ...
sub-bands as class distinction are completely arbitrary ... there's no
fundamental difference between any two frequencies on the 20m
voice segments ... why should things be balkanized in some eletist
fashion???

in the proposal, mere posession of a PA capable of exceeding the limit
would be prima facia evidence of violation.

Why not. Novices in the 50's had a 75w power limit and
I don't recall ever seeing it as a problem or a limit that was
routinely being ignored.

I.I.A. Italian Islands Award

*** IIA TROPHY - 1997 ***

This Trophy is issued by the Crazy DX Group.
Every OM and SWL (world-wide) can participate.
The purpose is to contact/listen/activate the largest number of different italian islands.
Only referenced islands from the official IIA list will be valid, but also any possible island reference released after the Trophy's starting.
The participation is free of cost.
Have a good hunting !

PARTICIPATION PERIOD

From June 1st to September 30th   1997.

BANDS

It will be valid every qso/listening/activity on every amateur radio band.

POINTS

Each different contacted/listened/activated italian island will count 1 point.

CATEGORIES AND PRIZES

3 categories are available: OM, SWL and DX-PEDITIONERS.
It's possible to participate at more than 1 category. Points of different categories cannot be combinable.
In the DX-PEDITIONERS category, it's necessary for the participant to be

the owner of the used call-sign in every activity.
A plaque will be awarded to the top scoring participants in each category.
Complete results will be sent by the postal service to every participant.

LOGS

Complete logs with datas of every qso/listening (call-sign, date, UTC time, band, mode, IIA reference, correspondent call-sign for SWL category) should be sent within November 30th 1997 to the following address:

CRAZY DX GROUP - P.O. BOX 11 - 04011 APRILIA - ITALY
or through e-mail: crazy@grisnet.it

For DX-PEDITIONERS category's participants, it will be enough to send the complete activities list (dates, used call-signs and IIA references).

SPECIAL PRIZE FOR THE CRAZY DX GROUP MEMBERS

A special prize will be awarded to the Crazy DX Group member that will achieve the best result.

I.I.A. Italian Islands Award

-- TROFEO IIA 1997 --

Il Trofeo, istituito dal Crazy DX Group, e' aperto a tutti gli OM ed SWL italiani e stranieri.
Scopo della competizione e' di collegare/ascoltare/attivare il maggior numero di isole italiane diverse.
Fara' testo la lista ufficiale IIA. Saranno valide anche eventuali

referenze assegnate dopo l'inizio del trofeo. La partecipazione e' gratuita.
Buona caccia !!

PERIODO DI PARTECIPAZIONE

Dal 1 Giugno al 30 Settembre 1997.

BANDE

Sono validi i qso/ascolti/attivazioni su tutte le bande radioamatoriali.

PUNTEGGIO

Ogni diversa isola italiana collegata/ascoltata/attivata varra' un punto.

CATEGORIE E PREMI

Sono disponibili 3 categorie di partecipazione: OM, SWL e ATTIVATORI.
E' possibile partecipare anche a piu' di una categoria. Non sono cumulabili i punteggi delle diverse categorie.
Per la categoria ATTIVATORI e' necessario che il partecipante sia il titolare del nominativo usato in ogni attivazione.
Saranno premiati con una targa i primi classificati di ogni categoria.
I risultati e le classifiche saranno comunicati per posta a tutti i partecipanti.

ESTRATTI LOG

Gli estratti log completi dei dati di tutti i qso/ascolti (nominativo, data, ora UTC, banda, modo, referenza IIA, nominativo del corrispondente per gli SWL) dovranno essere inviati entro il 30 Novembre 1997 al seguente indirizzo:

CRAZY DX GROUP - P.O. BOX 11 - 04011 APRILIA
oppure via e-mail a: crazy@grisnet.it
o via packet a: IK0QDB@IW0FEF.ILAZ.ITA.EU (bbs) o IK0QDB >I0OWK-6 (pcl)

Per i partecipanti alla categoria ATTIVATORI, sara' sufficiente inviare la lista delle attivazioni completa di date, nominativo usato e referenze IIA.

PREMIO SPECIALE PER I SOCI DEL CRAZY DX GROUP

Un premio speciale verra' assegnato al socio del Crazy DX Group che avra' conseguito il risultato migliore.

If this were a perfect world, the Phase 3D satellite would already be in orbit, but the ESA has postponed our launch to Sept 97. This delay has caused Amsat to have a funding shortfall. If you can donate to the Phase 3D satellite project please do so. If you can donate more money, please do so. Your help will be much appreciated! 73

I am a member of AMSAT and never understood why a launch delay costs
us more money. Do we have to pay more for storage? If P3D is completed
why does it cost more to launch in Sept vs June?

I'm looking for a CB aerial to mount on my Nissan Pathfinder. The local
installer recommends a $140 Antenna Specialist antenna.
Obviously, since the aerial is the most important part I want to get the
best, but I don't want some huge aerial sticking high up on my car.
What can you suggest?
Peter

Maybe because they tinker with it until launch time? Find last minute changes? As always, EVERYONE wants MORE money. Like we have a tree full of it in the backyard....

Well Peter, you have a real dilemma on your hands. The best mobile antenna for CB would be a 9 foot whip mounted on the roof. Anything else is a compromise. Some people mount this stainless steel whip on their back bumper to reduce the overall highth. The Wilson K-40 antenna is a good choice as it is shorter but still very effective. Of course you can use a shorter antenna and a small (25-50W) R.F. amplifier to make up for the loss of transmit range. Do not go overboard on the amp as you can not talk to someone you cannot hear. Good luck in your quest for the ultimate signal from your mobile. Let us know what you come up with as we mobilers are always looking for a better antenna.

Keep in mind that the longer the antenna (up to quarter wave), the better
it radiates. Those small heavily loaded jobs are pretty good dummy loads.
The stainless whip is the cheapest and usually best. $140 seems pretty
pricey. Gud luck. 73's W1DB

What are you guys complaining about? If we have more time till the launch date
then we should take that opportunity to make the sat more efficient, robust and
test it till it is flawless. More work = more money. If we can't get more money
then I guess we could always store it in a ham's garage for free till the launch.
Does it matter if AMSAT is broke? Amateurs have always managed to build things on
a flee's budjet, good on them :)

Paul, VK2THN.

You can't legally use any amp on the CB band. Anything over 5 w is not legal.

I need help finding a schematic for two old GE mobiles (currently used as local repeaters), especially the wiring for the control head as the controllers are about to be replaced, and the wiring of the old ones us a mess.

the numbers listed on the ID plaques are:

RG56TFS66, or N.P. 243349

and

YG56KJJ66, or N.P. 243349

They appear to be the same radios with different options.

Thanks to all,

Ron, N7TAW

Power limits in accordance with license class are a good thing (as long as there aren't more than two power limits);

Some HF access for all license classes is a good thing;

Maintaining some aspect of code proficiency somewhere in the system is also a good thing; either at the very top for high speed or at the very bottom on a written exam.

But retesting every 5 or 10 years is an extrordinarily bad idea. I upgraded in order to be done with testing. I know what I need to know, from practice. I learn what I need to learn in practice. I don't mind filling out a questionaire about new rules at renewal time, but I intend to be done with VE sessions - unless of course I am the VE.

You also made the comment that the written exams are very easy. Do you not find being a ham radio operator to be likewise? The exam should scale to some extent to the activity - wouldn't you agree?

Curt Phillips <cphillips@pobox.com> wrote in article <5lgqaq$5rp@redstone.interpath.net>...
[snipped Curt's explaination of past opposition and subsequent change of heart with respect to no-code license]

> I have several friends who are highly skilled engineers in electronics, and they always said the code was preventing them from getting a license. And, as soon as the code requirement was dropped, they got their license. I'd certainly say that ham radio is better off for them being licensed.
>
> During the aftermath of Hurricane Fran, I worked in several emergency operations side-by-side with "no-code" Techs. They did a great job, and we needed them. So again, ham radio is better for their being hams... code or not.
>
> Because of the International requirement, I'm not sure totally eliminating the code would be appropriate, but I'd advocate 5 wpm General. They would "know the code" to meet the International requirement, but 5 wpm is little more that just having memorized the code. If the International requirement was dropped, I'd be for a no-code General.

Why *just* "general" ??? Why not "extra" ??? (bear in mind that there are proposals about that would reduce our licensing structure to 2 classes "entry-level" and "standard" (names are not important and subject to change)

> Put Advanced at 10 wpm... General has HF privileges, so to get extra frequencies a knowledge of code wouldn't be out of place.

Since I intended to ask the question before I read ahead, I'll go ahead and ask it anyway in the interest of understanding your feelings and thoughts ... Why do you feel that a code test is relevant and appropriate ("so to get extra frequencies a knowledge of code wouldn't be out of place")

as a means of "earning" TOTALLY UNRELATED priveleges??? I have
never been able to see, nor have I heard, a rational explaination that
really
justifies this ... all I've ever seen/heard were emotional arguments based
on things like "traditon" that have no place in government licensing
schemes.

> However, in the interest of reducing the number of license classes,
> I wouldn't even mind them eliminating the Advanced Class license, and
> adding those freqs to the General privileges.

OK ...

> For Extra, leave it a 20 wpm.

Why? What legitimate government purpose would be served?
(that's ALL that is valid as a criteria for government licensing)

> You can have a lot of fun and do a lot
> of HF operating without the Extra Class freqs (as I did for 25 years),

True, but neither is that a compelling reason for maintaining the status
quo ...

> Extra would just be a reward for extra technical knowledge and supporting
> ham radio tradition. I wouldn't even care if the Extra class band
segments
> were shrunk a little.

Proposals currently afoot contemplate combining advanced and extra theory
into the "standard" (arbitrary name) license class (5 wpm code test until
ITU
treaty requirements go away, no proposed ban on use of code, of course).

Besides, licensing is NOT about "rewards" .... even for "extra technical
knowledge" ... it's only about assuring necessary levels of competency
for the activities that the license permits (or conversely that the lack of
such
license prohibits or restricts ...)

>   Maybe a license structure like:
>
>   Tech   (for operations above 30MHz); no code
>   General (Tech with HF freqs); no code or slow code (5 wpm)
>   Extra (mostly an honorary license class, with 20 wpm retained)
>
>
>   HOWEVER, IMHO the technical tests should be increased in difficultly,

The 2 class proposal afoot contemplates the "entry-level" license as having
a technical test that's *at least* the equal of the full general theory
(current
no-code techs may have, but have not IMHO been tested for sufficient

technical knowledge to justify some of their privs ... like 1500W output at frequencies that can cook flesh and fog corneas) This "entry-level" class would have a power limit in the 50-250 W range, possibly 250 on HF and 50 at the higher freqs where physiological concerns of exposure are greater.

> and
> the publishing of the question pool should stop. It's just too easy
> to memorize the answers now.

It's unclear if the FOI and other government legal concerns would permit this, but there are ways to address this ... expanding the pool to a size that precludes memorization and randomizing variables via computer generated tests for each session (or even each individual) seem feasible ...

>   After one night of reviewing the manual, and I passed Extra theory and
> missed only one question (and I had somehow missed reading the
> page it was on). I'm an engineer, but an ME not a EE, and even though
> I'd been a ham for 25 years, it should have been more difficult than that.

I would agree that the technical tests are absurdly easy ... and should be more comprehensive ...

>   In technical tests, one of the things that makes you learn the material
> more thoroughly is the fact that you don't know how the test maker will
> try to "trip you up." However, with the amateur tests you DO know
> exactly how the questions will be framed. So you can create

>   And I'd definitely be in favor of more questions on digital modes.
>
>   So there, I've added a little fuel to keep the debate churning
> for a while longer. :-)

I have not differences with any of the above quote ...
please comment on your thoughts relative to what I've said about the 2 class proposal that's afoot ...

BWT ... the idea for conversion strategy that I've proposed is to grandfather all current licensees at their current priveleges in terms of power output for 5 years or until their next renewal, whichever is longer ... at renewal, they would take a test, if necessary to convert to the desired new class ...

for example
no-code techs would take a 5 wpm test and the "upgrade" written to convert ... (since the "E-L" written is more rigorous than the no-code tech written they already passed) ... generals would convert to "E-L" with no test required, but would be subject to the power limits and would gain frequencies, since there are

no class-based sub-bands under the new plan.

Advanceds would have to take an "upgrade" test to achieve "standard" class with full-power privs, ability to be a VE, etc.

Existing extras would automatically be "standards."

When the ITU requirements for Morse testing go away, none of the classes would require even the 5 wpm Morse test.

This begs the question of the continuation of a no-code class with VHF and up privs until that time, with the same written as the "E-L" but no HF privs ... this seems fair and reasonable, since such a class exists today ... when the code test requirements go away, the no-coders would automaticallty convert to "E-Ls" and gain HF privs (based on having passed the "E-L" written exam.

Please also comment on the conversion strategy ...

The only place I recall seeing the red herring is in your posts. I don't
recall any of the "pro-code" posts that really believed that the
anti-code-test folks are seeking to outlaw Morse Code.

Hmmm. . . :-)

Right on the nose! I'll be willing to help this issue any way I can. We agree on something! Kinda scary! Just kidding, but we (all hams) do need to come to some common ground on how to resolve these issues. The ARRL and FCC are not going to do it. Its ultimately up to us. See! I'm not such a bad guy!

So, if we follow you logic (or lack of it), because you think we don't need the code test any longer, we can't advance technologically until the test is gone. See, thats not an answer to the question. Thats just a "yes it is - no it is not" response. I'm trying to understand your side of the argument, but no one will answer me.

Me too.

> Put Advanced at 10 wpm... General has HF privileges, so to get

Sure it is since most all of the added frequency privaledges
are phone subbands for the advanced. See more below.

>However, in the interest of reducing the number of license classes,
>I wouldn't even mind them eliminating the Advanced Class license, and
>adding those freqs to the General privileges.

That's not an unreasonable viewpoint either.

> Tech   (for operations above 30MHz); no code
> General (Tech with HF freqs); no code or slow code (5 wpm)
> Extra (mostly an honorary license class, with 20 wpm retained)

Actually, I see no reason to tie 20wpm to additional frequencies
that are phone. I'd suggest having an Extra (non-code) and an extra
with code (20wpm or whatever anyone wants it to be). Set aside
the lower 50KHz of 80, 40, 20, 15 and 10m as Extra class with
the first 25KHz reserved for Extra+ as CW only.

> HOWEVER, IMHO the technical tests should be increased in difficultly, and
>the publishing of the question pool should stop. It's just too easy
>to memorize the answers now.

Did you know the following:
As was reported in the W5YI Report of 12/15/96,
the NOVICE and TECHNICIAN question pools
have increased by 46%. The prior set of
questions comprised a total pool of 632 questions,
while the new pool of questions is now 924.
The Novice pool has increased 41% from a total
of 342 questions to 483. The Technician pool has
increased 52% from 290 to 441.

Now I don't know anyone that can just spend
a weekend or even longer to exactly
memorize 440 questions, much less the
over 900 just to pass the Novice/Technician
set of theory elements.

What some may not have known (and I include myself
in that) is that there is no upper limit to the quantity
of questions that can be in the pool. There is
only a part 97 minimum (97.523) that requires
"Each question pool must be at least 10 times the

number of questions required for a single
examination."

Given that no upper bound exists for question pools,
I'd like to sugest that each question that deals with
a formula calculation have at least 20 iterations
where each iteration uses a different set of variables.
That should truly eliminate any rote memorization of
the questions involving formula calculations.

As the question pools for General, Advanced and Extra
come due for revision, a similar increase in the size
of the question pools is expected.

> So there, I've added a little fuel to keep the debate churning
>for a while longer. :-)

I welcome your positive contribution.

So, these people have to be hams to do this wonderful design work. And its keeping them out because.............................they don't want to take the code test? They can't "do" the code? What? This I need an answer to. (Yes, a REAL answer)

> 4th, this policy of technological stagnation has already harmed ham radio

Now see? Can't you just give an answer without doing this? I have really TRIED to stop the smart assed comments because I have become genuinely interested in "your" side of the argument. If I didn't WANT to know, I wouldn't ASK. At least I'm trying to get enough info to make an intelligent decision. I was an asshole about it at first, but now I really want to know.

you >do?
>

I would do very well actually. I have a few degrees myself sport! Just don't replace it with a world literature test. I hated that class!

Only 2 classes, only 2 power limits ... "entry-level" (say 50-250 ???)
and "standard" (up to 1500 WPEP)

> Some HF access for all license classes is a good thing;

The idea is FULL HF access all bands, all modes for both
classes (power limit is the difference, since it's justifiable ...
sub-band ghettos are arbitrary and "balkanize" our community)

> Maintaining some aspect of code proficiency somewhere in the system is
> also a good thing; either at the very top for high speed or at the very
> bottom on a written exam.

5 wpm until ITU treaty changes for HF access, then Morse is
COMPLETELY voluntary and optional ... no ban on use, though.

> But retesting every 5 or 10 years is an extrordinarily bad idea. I
> upgraded in order to be done with testing. I know what I need to know,
> from practice. I learn what I need to learn in practice.

Sorry ... I can't agree here ... maybe you do, but FAR too many have
not learned what they need to know, either initially, or by stagnating
40 years ago and leaning nothing since ... I firmly believe that some
retesting for technical currency is important to maintain our standards
of technical competence ... don't blow off the whole proposal on this
single issue ... I'm clearly not the sole decision-maker here, but I will
fight for retesting ...

> I don't mind
> filling out a questionaire about new rules at renewal time, but I intend
> to be done with VE sessions - unless of course I am the VE.

The retest does not necessarily have to be a full-blown test like one
would take to be licensed initially ... it could be a "spot check" on
new technology of the past 10 years ... I'm just looking for something
to preclude fossilization in place ...

> You also made the comment that the written exams are very easy. Do you
> not find being a ham radio operator to be likewise? The exam should
> scale to some extent to the activity - wouldn't you agree?

Being an amateur carries certain responsibilities and obligations which require
a certain level of technical knowledge and skill ... everyone does not need to
be an EE, but they should at least be reasonable lower-level technician material.
The present exams do not assure that minimal necessary level of knowledge and
skill, as witnessed by the know-nothings in our ranks ... some of whom are
extras and haven't a clue, even about such basic things as Ohm's Law and how
to cut a diplole to resonance ... we cannot permit that sort of thing to continue.

We're talking about only 2 classes, both of which have only a 5 wpm
Morse test and that ONLY until the ITU treaty drops a code test
requirement ... the Archaic Retro Radio Luddites or the Fanatical
Idiots Supporting Technological Stagnation are free to offer voluntary
Morse speed "Brag Rag" certificates to anyone who wishes to jump
through whatever non-governmental hoops they choose to establish.

I vote that we replace the code test with a world literature test ... that
way Graham may begin to comprehend the absurdity, irrelevance, and
stupidity of Morse testing ..

But if he really understood and took the time to get into world literature
he would come to love it (and then try to force it on everybody else). :-)

Why would non-hams spend large amounts of time and energy developing
stuff for hams to use if they weren't able to use it themselves??? (And
don't
tell me "to make the big bucks" ... that will only get laughs ... ham gear
mfgrs.
have been steadily going out of business for years and years because the
market is so small and the customer so damned cheap ...

> And its
> keeping them out because............................they don't want to
> take the code test? They can't "do" the code? What? This I need an answer
> to. (Yes, a REAL answer)

Because the skilled people we need are too smart and too busy to waste
the relatively huge amounts of time necessary to get "proficient" in Morse
when the have no interest in using it and never will use it ... it's a
waste
and a torture they're not prepared to endure ...

The purpose of ham radio, in the eyes of the regulators (and the reason we
have bands to begin with) is primarily to encourage technical
experimentation
and self-training ... that's what we're not doing NEARLY enough of ... the
vast
majority of today's hams are technically ignorant applianace operators who
waste valuable spectrum playing games and being obnoxious ... period.

MD and others will disput this and try to play all sorts of word games to
try to make it seem otherwise, but the technical and public service aspects
of ham radio are ALL the regulators give a rat's ass about ... they could
carl less than less about contests, etc. in fact if they really observed
what
goes on on our bands closely for a few weeks or months, they'd probably
summarily pull the plug on us without further discussion ...

Nowhere in Part 97 does it say jack about games, contests, etc. ... that's
ALL a perversion of ham radio that was dreampt up by the ARRL ... they have
COMPLETELY devalued and deemphasized what ham radio is *supposed*
to be ...

That's what we need to fix ...

> >(if we don't "get a move on" the FCC will likely decide that we're not

Wow! Cecil, your arguments amaze me. They are so connected to reality.

Tsk What the hell has baseball and purely physical attributes got to do with CW and Ham Radio. Would a 4 1/2 foot tall basketball player make it in the NBA? A better analogy though since in this case physical attributes are a factor.

Keep up the good fight.

Hi all,

I am trying to find any information on the propagation and behavior of QPSK transmisions in the 25 to 29 Ghz band.
Especially maximum range in good weather, rain and fog interference and reflection aspects, that is, does the signal reflect of buildings, trees or is it absorbed.

Any information on these bands is welcome, either amateur experiments or commercial data.

Please reply by EMAIL as I do not normally read these newsgroups :)

Thanks for all help,

Bart Kindt

Seems to me that it is discriminatory to use CW as a filter to keep people
who want to use voice on HF off of HF bands....

Codeless techs can't use the technology they develop on the VHF+ bands?

>The purpose of ham radio, in the eyes of the regulators (and the reason we
>have bands to begin with) is primarily to encourage technical experimentation
>and self-training ...

You might want to re-read 97.1. Only 40% of 97.1 deals with technical matters. 60% of 97.1 deals with communications-related issues.

>MD and others will disput this and try to play all sorts of word games to
>try to make it seem otherwise, but the technical and public service aspects
>of ham radio are ALL the regulators

Technical != public service. Knowing how to build a radio does >not< make you an effective emergency traffic handler. These are two entirely different skill sets. The latter is by far more important than the former, even though you would never admit it. It only takes a few people to design something technically, whereas it takes hundreds or thousands to adopt it and use it efficiently. The interaction that public safety officials will have with hams is strictly on the communications end -- how well they handle emergency traffic -- not on how well they can build a radio.

IMHO, we need an act of Congress that would allow the FCC to
charge reasonable fees for ham licenses AND not have to dump those
fees into the federal general fund slush fund never to be seen again.
If the FCC could keep ham fees in a separate fund, dedicated to
ham enforcement, they could hire a few field engineers and put them
on the worst cases ... a few solid prosecutions with seizure of the
offending ham's equipment, some serious jail time, and heavy fines
and I'll bet a lot of the sociopaths would "get religion." Those who
didn't would percolate to the top of the list sooner or later and get
busted.

I would happily pay $100/year under these conditions ... now before
folks start bitching and whining about how "that's too much" consider
this. It's about the cost of two evenings out, consisting of dinner for
two with a drink or two for each person at a middle-of-the-road sort
of restaurant ... or a day at Disneyland (probably less than that) ...
or whatever ... my point is for a year it's cheap ...

Anone unwilling to support the service in this way doesn't deserve
to remain licensed, IMHO ... if they can't afford this, they can't afford
radios, etc. either ... so I would maintain that cheapskates should
either pay up or get out ...

Codeless techs are systematically excluded from what even coded hams
readily admit is "mainstream ham radio" ... many refuse to participate at
all as "second-class citizens" relegated to the radio equivalent of "the back
of the bus."

> >The purpose of ham radio, in the eyes of the regulators (and the reason we
> >have bands to begin with) is primarily to encourage technical

experimentation

> >and self-training ...
>
> You might want to re-read 97.1. Only 40% of 97.1 deals with technical matters. 60% of 97.1 deals with communications-related issues.

You might want to see the scarecrow from the Wizard of Oz and see if you can borrow a brain ... your assertion is crap and you know it ... you assume erroneously that every one of a set of sentences is of equal imporance in the eyes of the regulators and carries equal weight.

Since your sig seems to emphasize the importance of firearms in your personal lifestyle, I will try to explain this in terms which may actually be capable of penetrating that thick skull of yours, Mike ...

Let's say that I have several guns ... ranging from a BB gun, to a .22, to a 30-06, to a Weatherby .458 magnum elephant gun, to a 75 mm recoilless rifle ... would you consider them equally "important" in terms of the damage I could do to you, were I to shoot you in the chest with each of them???

If I were to say "Mike, I'm going to shoot you with *one* of these guns, but you get to choose which one," would you say "I don't care, it doesn't matter to me, so you go ahead and use whichever one you like." ???

Just like the BB gun would do the least damage (and the larger caliber, more powerful weapons would do more), the parts of 97.1 are NOT of equal importance. To assert otherwise is like saying that the .458 magnum and the BB gun would harm you equally ... ridiculous ...

> >MD and others will disput this and try to play all sorts of word games to
> >try to make it seem otherwise, but the technical and public service aspects
> >of ham radio are ALL the regulators
>
> Technical != public service. Knowing how to build a radio does >not< make you an effective emergency traffic handler. These are two entirely different skill sets.

I agree 100% with the assertion that "technical != public service" in the most basic sense ... however, the blanket statement you make above is not *entirely* all-encompassingly accurate in the following senses ...

1) it presumes that an "effective traffic handler" is one with a well-practiced set of manual skills that are "necessary to handle traffic effectively" (this could include proficiency in typing messages into a digital message transmission system on a keyboard, an alternative that would be far faster and more effective than manual Morse)

2) it ignores the fact that one can build advanced communications systems that can handle far more traffic far more effectively and accurately than Morse and do so under conditions where Morse would be completely inoperative. (IOW, the more advanced system is demonstrably better at meeting the operational needs of the user)

3) it also ignores the fact that without the technical skill to build, install, and maintain (or at a minimum install and maintain) systems capable of meeting such needs, all the clerical skills associated with "being an effective traffic handler" in the ancient sense to which you refer are USELESS.

4) Finally ... your definition of "public service" is rather narrow (but that's understandable since it's been inherently constrained by the narrowness of your mind) and ignores the fact that the goals of self-education, developing a pool of "electronics experts", and adavncing the SOTA in radio communications are *also* activities that can be demonstrated to have "public service" or "public
interest" value ... IOW, the public in general benefits from such activities
..

> The latter is by far more important than the former,
> even though you would never admit it.

Of course I won't ... because your assertion is false ... you don't like or want to be bothered with the technical side, so you seek to construct a distorted world view where the importance of what you don't like is artificially de-emphasized ... because that suits your agenda, not because it's real.

> It only takes a few people to
> design something technically, whereas it takes hundreds or thousands to
> adopt it and use it efficiently.

The point that eludes you is that those hundreds/thousands need to have a reasonable level of technical knowledge in order to be capable of adopting and using it effectively ... otherwise, they're too ignorant to be able to install,
adjust, and operate it properly and effectively, and they may end up doing more harm than good ...

Just because you're the poster child *and* "Jerry Lewis" of technical ignorance
all rolled into one person doesn't mean it's a worthwhile cause Mike ...

Lindsay,

I agree that the published question pool with exact asnwers is a BAD idea and causes problems .... however, there are other, more insidious problems ... the foremost of which IMHO is the existence of a mindset (such as evidenced and promoted by MD and others, including the ARRL) that de-emphasizes the importance and purpose of the technical side in favor of beeping, competitive games, and the like ... this has had very serious harmful effects on the ARS over the past several decades.

We need to reverse this trend and get back to what we're supposed to be, not some perverted shadow of our past glory created in the minds of some macho gamers ...

Bob,

Cecil's analogy is right on ... the variation in ability to learn to copy Morse

code amongst individuals and is a variable physiological attribute,
just as is the variation in height ...

The fact that amateur radio seems intent on self-selecting against those
with the very (technical) skills that it needs for its own future survival is
indeed "like a basketball team that won't accept anyone over 6 feet tall,
then wonders why they're a bunch of losers and get absolutely no respect."

Yeah, and to think that in all this sillyness he could be working on
getting them on the VHF+ frequencies, where he has tens of megahertz of
spectrum available w/ no code test, but it "just so happens" that he
"needs" HF.

Yeah. Uh-huh. Right.

Hi Michael, he *has* indeed put them in operation on the microwave frequencies. It is I, not he, who need him to put them on HF. He says, "Why should I help you on HF designs when I'm not even allowed there?" I don't have an answer to his question, do you?

Here's the drum. The signal goes out until it contacts a solid object then it stops. If it encounters a partialy solid object it is attenuated.

Range at that frequency for a practical amateur aplication would be around 100 metres.

Cecil is actually one of the nicest folks I've ever broken bread (or
spicy Thai food) with. I suspect Cecil and I would agree that smallpox
testing has a much actual relevance to amateur radio today as the
Morse exams, too.

;-)

Or more to the point ... how would you feel if you had to pass a
smallpox test to get a ham license ... it would be about as relevant
as a Morse test ... <grin>

Contests have existed long before ARRL decided to support those who play
that game. Why, there are even a few not sponsored by the Leauge. :-)

Be careful of extremes. I think some of the work ARRL has done promoting
public service falls a bit outside the scope of rather strongly
emphasized "COMPLETELY."

I wasn't aware that 40% of the amateurs in the US had contact with
smallpox on a regular basis when on HF....

Lame Glen, really lame. We are talking about a hobby, not a career. Repeat
after me: career = income, hobby = fun. Lots of people have a job that's no
fun. Only a masochist would have a hobby that's no fun. Do you have a hobby
that's no fun? Why do you want someone else to have a hobby that's no fun?

> It's merely a matter of a few weeks
> or months of practice and most anyone can get on HF.

Or "merely" years and years of failure to get to 13wpm. Then the indignity
of a medical waiver when there's absolutely nothing wrong with the person.
IMO, Just another form of hazing/discrimination to make some inferior folk
feel superior to someone who is, in reality, superior to them in all ways
except wetware modeming. IMO, one way to achieve superiority is to tear the
other person down and that's exactly what the CW testing requirement does.

> > to learn the code, is discriminatory".

Again, I would like to point out the flaws in this statement.

1) Anyone UNWILLING to learn code IS NOT being discriminated against. They
have CHOSEN not to participate.

2) There is a system in place to grant a waiver to anyone UNABLE to learn
code for some medical or physical reason.

Therefore: Neither of the above mentioned cases can be in any way defined
as discrimination. The Canadians are wrong.

Sure... First, he's helping >you<, isn't he? If I help a friend work
on a project, I don't necessarily expect reap benefits (i.e. if I help
a friend work on his car, I don't expect to drive it.) In many respects,
his answer sounds awfully selfish.

Second, he can reap benefits, by operating under your license, with
certain restrictions.

Good deal Carl!

Hey, I thought the "invention" of Amateur Radio also had something to do
with providing emergency communications (I.E. field day ect.) What is the
"official" reading on this?

Cecil ... the stock answer to the question seems to go something
like "those stinking no-coder, technical types should be GLAD to
grovel at the feet of "higher class" beeping hams and hand over all
the technical stuff they've developed so the "higher class" beeping
hams can use it, too" (oh ... I almost forgot, "they should also install
it and maintain it for the benefit of the "higher class" beeping hams,
since they can't do it themselves 'cause they were too busy learning
to beep to learn how to do that technical stuff themselves ...")

No, Graham, the Canadians are dead bang right ...

Arbitrary "filter mechanisms to exclude" (anyone for anything that's
not truly relevant and mandatory) are discriminatory and should NOT
be part of government-mandated licensing schemes.

>Again, I would like to point out the flaws in this statement.

>1) Anyone UNWILLING to learn code IS NOT being discriminated against. They
>have CHOSEN not to participate.

I might have to agree, that the reasons given here may be poor, but it does not deny the fact that code testing is discriminatory.

From the 10th Edition of the Merriam Webster's Collegiate Dictionary:
discriminate: distinction, to distinguish between ~ 1a: to mark of perceive the distinguishing or peculiar features of 1b: distinguish, differentiate ~ 2: to distinguish by discerning or exposing differences; to distinguish from another like object ~ vi 1a: to make a distinction ~ 1b: to use good judgment [??] ~
[****]2: to make a difference in treatment or favor on a basis other than individual merit[****]

I believe the last definition has the most relavence here, and it is precisely the issue. It is the "merit" of the code tests to determine operator qualifications which is in dispute. It is the existance of the current requirement (that all applicants must memorize and become proficient in one particular popular encoding scheme), and it's relationship to, or more specifically the lack thereto, an licensee's ability to operate a radio transmitter on the amateur bands in compliance with national and international regulations which is in question.

To require and reward this particular type of manual proficiency, which is not a required mode of operation, does not demonstrate an operator's skill and knowlege to otherwise operate amateur radio transmitting apparatus, and does not demonstrate an operator's knowlege of the underlying radio principles or pertinent regulations, is indeed treatment or favor on a basis other than individual merit. Governments should stay our of the business of awarding brownie points for extracurricular activities.

>Therefore: Neither of the above mentioned cases can be in any way defined
>as discrimination. The Canadians are wrong.

>K4XA
>Graham

The good gentleman from 4 land is wrong. There are many good reasons to learn code and operate CW. But none of them are persuasive as a requirement. Overall, the Canadian stance is well reasoned and will find general support at the ITU.

A question was asked recently about what sort of test might replace the code exam (Bob Wexelbaum, I think). My view is the tests already exist. But it can be argued that supplementing the content of those written exams would be appropriate in such an eventuality. Gary (also in 4 land) has made an excellent suggestion in my view, with regard to practical problem solving on the written tests. I would like to see that implemented (so I could work the problems) :-). Perhaps Gary would like to provide us with an example of one, if only to tantalize?

In addition, merging some or all of 4A with 3B, and adding 5 written questions regarding the Morse characters would be a more than adequate requirement for HF privileges. Hardly a "dumbing down". The technical "level" of the questions in the written exams thru Extra is appropriate for amateur radio. The scope of the material could be increased to be somewhat more comprehensive and inclusive. That's a lot of work to pile on the VEC's. However, I think they have demonstrated they are more than up to the task.

That problem exists within ham radio ... I would venture to say that a vast majority of long-term licensees (and I am in this group, having been licensed since 1975) are woefully incompetent by today's standards because they have not kept up with the changes in technology (I do NOT fall in this sub-group).

This is why I favor retesting for a reasonable level of technical currency and competency at each renewal ... giving existing licensees 5 years or until their next renewal to prepare in the interest of fairness ... anyone who cannot become technically competent in 5-10 years simply is not qualified, period. This is consistent with the govenment's objectives in licensing.

> This whole discussion is getting more ridiculous by the second. Who can
> sound smarter than whom....Who can use the biggest words...The anti-code
> people won't listen to anything the CW people are saying.

We listen to the Morse Myths, promulgated by the technically ignorant and refute them with sound, factual engineering facts ...

We reject the emotional arguments like "it's *tradition*" or "you have to *work* for it" ad nauseum ... because they have no place in a government-mandated licensing arena ...

Those two areas seem to completely cover "the pro-code side" ... what else is there to listen to???

That's simply the result of voluntary agreements (largely promulgated by the
ARRL) designed to provide a "sanctuary" for the beepers.

So *that's* how you became a ham, Mike? Some clerk who cross-trained
from processing the old CB license apps at the FCC office in Gettysburg
screwed up from force of habit and issued a license to you on the basis
of a CB-like affidavit you made up and mailed in?

You get credit for an original idea (probably your only one) ... but I'd
still
love to see you retested to a decent theory test ...

I see code exams as necessary ... if you want to run cw in the HF cw sub-bands only. The only treaty obligation we have is for 5 wpm code. They (13/20 wpm code tests) have no future reason to exist for testing to see if a ham should be able to operate voice or data (computer) in the HF voice and data bands.

If the present high speed code hams [Generals and above] want to keep the current code testing requirements, then lets make them put up or shut up. Change the rules to require RE-TESTING on CW (13/20 wpm only) every 5 years in order to keep your license.

Let's see what happens. If they truely believe in CW they will endorse this idea. But if they only want to keep other hams out of HF country then they will fight this change to improve the CW use on HF. Because they won't want to have to re-learn the code themselves in order to keep their licenses.

If you agree and would like to help me change this present situation,
email me: KE4IKT@sco-inc.com

This thread sucks major wind.

anti-code-testing group calls pro-code-testing "rabid" consistently,
pro-code-testing calls anti-code-testing names and so on.

I am extrememly new to ham radio and i think this sucks!

a.c.t. says the code test is irrelevant and more theory should
be emplaced. why? what difference does it make? i've got a handful
of degrees so does a lot of people. the only theory that really
pertains
to ham radio today is: don't cuss, give your call sign at the designated
intervals, EVEN though i do homebrew and build tube types and make my
own
antennae on occasion. I'm even building an ATV addition to my 6m, 70cm
multicast repeater which is 50 percent or so homebrew.
which brings me to the next cut.

p.c.t. says keep the code test to keep people out. a harsh way of
saying
incentive licensing i guess. the a.c.t. people say "hey, if you wanna
use
code, fine just don't MAKE us." why doesn't it work the other way. if
you wanna re-invent rf principles by being a demon at theory then fine,
don't MAKE me. people DO buy off the shelf radios and use the spoken
word
when communicating. how much freakin theory does that take? relevant
topics as i stated before are to not cuss and give you call sign when
appropriate. that's all freakin frequencies.

dang, both sides suck.

i became president of our little ham club in Salem, MO. my club
runs a parallel with this news group. back biting, arrogant and
no concern for their appearance to prospective hams.

i'm in favor of code testing so i guess i'm "rabid" too. but i am
NOT AGAINST reducing speeds OR other mode testing. some have
offered up packet and fax etc. that's along my area of expertise as
my degrees are rooted in the computer arena.

more to the point:

what's wrong with promoting ham radio's worth rather than
detract from it.

>technical pursuit ...

Errr, guess you haven't been reading your Part 97. Only 40% of 97.1,
the section which defines what amateur radio "is", deals with matters of
a technical nature.

Thus, amateur radio is >not<, by FCC definition, a technical pursuit,
no matter what you, up there on Mt. Olympus, state.

>They (rightly
>and understandably) refuse to bow to a community which predominantly
>consists of their technical inferiors and waste significant amounts of their
>valuable time and eneergy

Translated: They are superior to the rest of us, and how >DARE< we question their superiority. They are the GODS of Mt. Olympus. We're just supposed to genuflect in their general direction and let them do whatever they want, including giving special dipensation with regards to the rules.

>In short, if Morse had been made optional about three decades ago, like it
>should have been, we'd have a far larger number of technically competent
>hams

Blah blah blah, yada yada yada... same of bull-$#!+ ... More personal opinion passed off as "facts"... Wonder what professional study concluded this... Maybe Carl will post the reference... (More than likely not, though, since we know Carl blows facts out of his rear-end...)

>We do agree that the technical testing methodolgy is flawed and permits
>huge numbers of technically incompetent people to gain licenses ... that's
>directly because the entire emphasis of the ARRL's "Incentive Licensing"
>scheme was to assert the ability to copy faster and faster Morse as the
>primary metric of "goodness and merit" in a ham.

Blah blah blah, yada yada yada. Morse Code the root of all evil. Morse code is responsible for earthquakes. Today's lousy weather is all the fault of Morse Code. Morse Code is responsible for crappy theory examinations. Morse code caused the black plague, great Irish potato famine, and a host of other world-wide disasters....

> ... the ARRL and it's retrogressive, stagnating
>policies are orchestrating the ham radio equivalent of Jonestown or
>the recent mass suicides near San Diego ...

blah blah blah, yada yada yada... The only person in outer space here is... well... Mt. Olympus is above the clouds, after all. Hmmm... Maybe the air is a little thin up there... It would explain a lot...

>Not bragging Jerry, You told me dyslexics couldn't learn the code.
Just
>reminding you that it's not true. Still two of us. You and I.

I never said dyslexics could not learn the code but rather the effort
they had to put in to do it was excessive. Again I ask you not to cite
me as an example. With recent demonstrations of your need to "win"
debates at any cost icluding truth and honor I doubt you will comply
with my request but I still ask.

As to your assertions on education they are too far off subject to
comment further but they were entertaining. I'll let you and the AMA
work that issue.

Now I will take my own advice and not bother with you any further, I cannot debate the factually challenged.

Jerry

Bzzzzzt! Wrong. Cecil may have *implied* such things, and you or others may have *inferred* them from what he wrote, bur the reverse is incorrect.

Since we have "implied" CW-purity Nazis spewing all over the newsgroup, do you mind if I get on my launguage high horse and demand that hams learn proper English (or thrir native language), whether SSB, FM, CW, or Usenet?

After all, there are many sides to the "purity" of ham radio...
Misusing the language in an attempt to appear erudite is counter-productive...

hossie, KC0ES, who wishes more people would "stick it in their
innuendoes" and enjoy whatever aspects of life appeal to them without
trying to force others into the same mold

No, Grahm ... we realize that the theory is also harder for some that for others ... and we're *not* suggesting a level of difficulty equivalent to an EE degree or the like, as MD and others often assert in their efforts to unrealistically frighten people about the results of reemphasizing the technical side of ham radio instead of clinging to 1847 beeper "technology" (Morse is so outdated I just can't bring myself to call it "technology" without using the quotes)

But ... we also recognize the reality that the theory is a NECESSARY and JUSTIFIABLE licensing requirement, while changes in technology and other factors make it impossible to rationally justify continuing to force all hams to learn Morse code to obtain totally unrelated HF priveleges ...

Like it or not, the logic and rational justifications of theory vs. code are sort of like a diode ... they only work in one direction ...

Actually, we're not really talking about making the tests significantly "harder" in terms of the technical level ... just fixing the test methods so that people will have to really understand the necessary material instead of being able to "luck out" and guess their way through the test without really knowing anything. (that happens too much today ... MD is a perfect example ... he regularly brags about how he memorized the answers without giving a hoot about what they meant or how things work ...) We don't want technically incompetent hams. They are far more likely to cause harmful interference, could possibly hurt themselves or others, and just generally give all hams a bad name and image ..

I hope I've clarified these points in a way that makes my position easier for you to understand and agree with ...

Hello:

I enjoy using the CW mode very much. I use sending/receiving speeds
as required.

I am, for one, in favor of re-testing to renew ham tickets, but let's
not stop at retesting for CW only.... I would go along with retesting
theory and cw (at all speeds and all levels) anytime that I want to
renew my ticket. Certainly, we should start with retesting at 5 wpm so
that those that cannot send/receive at 5wpm are weeded out first.

Thanks for expressing a good idea, but I dont think you have gone far
enough.

73s,
Vince

Certainly, we should start with retesting at 5 wpm so that those that cannot send/receive at 5wpm are weeded out first.

I have no fear a 5 wpm test ... I am sure that a week of evenings at the computer with something like SuperMorse would get me up to snuff. (I suspect I could pass 5 wpm with no brush-up, but I used to be a Boy Scout ...) ... contrary to what some pro-coders think, I really *did* learn Morse and actually used it considerably in my early days ... because that was the only mode available on HF, period, end of story. Had I been able to use SSB and RTTY and to experiment with other modes (like those I was working on at work, for example) I would have done all of that in a heartbeat and NEVER used Morse again. BECAUSE I NEVER *LIKED* MORSE ... NOT FOR ONE SINGLE MOMENT ... even though at my "peak" I could pretty well copy a QSO at about 20 wpm (roughly, I never measured it with precision, and I, unfortunately, didn't get an opportunity to take a test ar that time, or I'd likely be an extra now ...)

Despite what the code bigots think, none of that makes me "less of a ham."

However, I would submit that *IF* code speed is *REALLY* important then it's *MOST* important that those who are licensed at the highest levels (which, "of course" makes them "the most important" hams) must, OF NECESSITY, be retested first, since if they aren't truly capable of the blazing speeds *REQUIRED* for their higher class of license, they'll obviously do the most serious, irreperable damage to hamdom, the world in general, and the "reputation" of the ARRL, etc. ("IF" this *ISN'T* TRUE then the entire argument that code testing is "necessary" at all falls apart.)

SO, if you want to retest for code, then retest all the cranky, senile, drunken, psycopathic olde fartz on 80m and 20m FIRST ... since less than 40% of the ARRL-surveyed hams EVER use Morse, I doubt that 50% of those lids could pass a spot-check at their "license required" code speed ...

Now, this cuts both ways ... since I voice the opinion that the theory

is the most important part, I'll happily volunteer to be retested in that
area ... I doubt that many of the undesirables I mentioned in the
preceeding paragraph could pass a *decent* technical test either.

> Thanks for expressing a good idea, but I dont think you have gone far
> enough.

Thanks for supporting a good idea ... but I don't think you're suggested
method of application is the most logical ...

It's just a means of expressing that the discrimination is "sort of
like" racial discrimination and/or segregation ... i.e. "without
sound basis, unfair, arbitrary, and distasteful."

Go rent a clue ...

>
> K4XA
> Graham

Actually, Graham, I'm going on 47, but I'm NOT an "olde farte" ... an "old timer" in some people's eyes, perhaps ... almost ready for QCWA in fact ... but NOT an "olde farte"

You, on the other hand, even at 34, appear by the attituded that you express
to be a perfect demonstration that one does not need to be chronologically old to be an "olde farte" ... you see, it's NOT a matter of chronological age at
all, but rather of attitude, openness to new ideas, spirit of exploration/invention,
refusal to accept stagnation, etc.

Yes, Graham, it would appear that, unfortunately, even at your relatively tender
age, you have chosen to figuratively senilify yourself, don a set of blinders that
prevent you from openly considering, accepting, or even tolerating new ideas,
actively lobby for technicological stagnation, and discriminate_against, ridicule,
and shun those who have not (whether forcably or willingly) espoused the same
narrowminded, bigoted philosophy ... YUP, you're an "olde farte."

How sad ... another mind bites the dust ...

Carl - wa6vse
wa6vse@fast.net

p.s. I hestiate to mention it, because it's really a "downside" rather than an
"upside," but since you obviously needed clarification on what constitutes "an olde farte" and since I try to do a thorough and complete job of providing
information when it's requested, I should probably (reluctantly) point out that
all of the above would appear to make you an IDEAL candidate for membership in both the ARRL (that's Archaic Retro Radio Luddites) and FISTS (that's Fanatical Idiots Supporting Technological Stagnation) ... both groups hold views
that correlate with yours and would, I am sure, welcome another olde farte like
you with open arms ...

p.p.s. Enjoy your new life as a "Stepford Ham" ...

Hi Graham, I didn't say code testing is a form of "racial" discrimination
although it does remind me of racial/sexual/religious discrimination.

I said it is discriminatory and that's not such a stretch. "...to exclude
those unable or unwilling to learn the code, is *discriminatory*". From the
president and board of directors of Radio Amateurs of Canada, Inc.

Did you happen to have your forsight circumcised at birth?

Hi Carl, I wonder if we could get enough support to cause that to happen?
Instead of bringing criminal charges against those guys for foul language
and interferrence, maybe a mechanism could be set up for requiring hams who
violate the rules of ham radio to be required to re-test at their current
license level or else forfeit their license.

SImple solution ... don't read it ...

> I am extrememly new to ham radio

Welcome aboard ... but with all politeness intended, this implies
that you don't have the background or experience to recognize
the importance of the debate or the need for change.

> and i think this sucks!

Again, respectfully, simple solution ... don't read it ...

but you might actually benefit from coming to an understanding
of the underlying issues, prejudices, and problems and how
they threaten the very future survival of our service ...

> a.c.t. says the code test is irrelevant and more theory should
> be emplaced. why? what difference does it make? i've got a handful
> of degrees so does a lot of people. the only theory that really
                   ^^^^^^^^^^^^^^^^^^^^^^^^^^

obviously not in English grammar <grin>

> pertains
> to ham radio today is: don't cuss, give your call sign at the designated
> intervals,

if you *really* believe that, then you don't have a clue about why
our service exists and what it's supposed to accomplish ...
(glad to hear you do some building, despite your feeling that
theory knowledge is unimportant)

> people DO buy off the shelf radios and use the spoken
> word when communicating. how much freakin theory does that take?
> relevant topics as i stated before are to not cuss and give you call sign
when
> appropriate. that's all freakin frequencies.

Simply communicating via radio is NOT what ham radio is about,
nor does it take even the tiniest baby-step towards meeting our
charter goals and purpose responsibilities ...

> i became president of our little ham club in Salem, MO. my club
> runs a parallel with this news group. back biting, arrogant and
> no concern for their appearance to prospective hams.

Unfortunately, that's not just your club or this newsgroup ... that's
the the norm in many ways ...

> i'm in favor of code testing so i guess i'm "rabid" too.

not necessarily ...

> but i am
> NOT AGAINST reducing speeds OR other mode testing. some have
> offered up packet and fax etc. that's along my area of expertise as
> my degrees are rooted in the computer arena.

>
> more to the point:
>
> what's wrong with promoting ham radio's worth rather than
> detract from it.

The anti-code-test element is NOT "trying to detract from ham
radio's worth" but rather to enhance it by promoting the modernization
and adoption of new technologies that we so desparately need to
survive into the coming century ...

-------------------SNIP the same old bull *&%$------------------

What NONE of you people have explained is why we have to drop the code test to adopt "new technology and modernize". I don't understand why you think that can't be done with the code test in place. You can't purchase and use the latest and most advanced equipment because you have to take a code test? How does the code test stop this? Thats what I don't understand. I don't have on blinders and I'm very open minded. The fact that I have put up with your crap for so long is proof of that. OK, this is your shot! Explain it to me. How does the code test requirement prevent me or anyone from using the latest forms of communication technology if we choose to do so? This is an real question and I would like an real answer. Not just another worthless comment. Thanks in advance.

Wrong yet another time Cecil! To exclude some who is UNWILLING to learn is
NOT discriminatory. They have CHOSEN not to participate. And for those who
are UNABLE to learn, a system is in place to provide a waiver. So once
again you have demonstrated your inability to use simple logic.

Hi Cecil,
I have to say kudos to you on this one! I may not agree with allot you say,
but you are correct when it comes to proper operating procedure. You guys
might not like my ideas on code, but I do use proper procedure 100% on the
air. Some of the crap I hear on HF is a disgrace. Good idea.

Hi, Cecil.

I, too, think this idea is excellent. Now here is a cause on which we
can all expend some concerted energy!

Best regards,
Lindsay Foster

Your assertion that there is no discrimination WRT code and that
my assertion that there is is "asinine" is akin to a white plantation
owner of old asserting that his slaves "are quite content with their
lot in life, are treated well, and wouldn't know what to do or how to
take care of themselves were it not for his (their master's) magnificent
generosity and benevolence in seeing that they were cared for, fed,
and had the means to earn their keep."

Seems your application for credit on your lease has been denied ...
(sorry, not clue for rent to you)

> ------------------SNIP the same old bull *&%$-----------------
>
> What NONE of you people have explained is why we have to drop the code
test
> to adopt "new technology and modernize".

The two subjects are interrelated in a way that I strongly suspect is
beyond
the intellectual capacity of those of you with such deep Pavlovian
conditioning
to absorb and comprehend ... however, they ARE interrelated.

> I don't understand why you think
> that can't be done with the code test in place.

First and foremost, the whole "beeping is the best and highest method
of communicating by radio" myth has to be soundly destroyed, since
it's patently false and generates a LOT of bad attitudes towards hams
(from the public), amongst hams (the way beepers look down on non-
beepers, and the resulting resentment), and in many other ways.

> You can't purchase and use
> the latest and most advanced equipment because you have to take a code
> test?

Again ... try to find somewhere to at least rent or borrow a clue ... you
can't
just "go out and purchase and use the latest and most advanced equipment"
period ... you have to design and build it ...   at the pace at which
technology
is moving, by the time even the newest commerial product *is* a commercial
product, it's virtually outdated ... this is why we need more folks who
have a
clue about technology and fewer beepers, yackers, and gamers (whose
[incorrect] idea of the "purpose of ham radio" is to support whichever
of the previously enumerated activities they prefer, regardless of how
inane)

> How does the code test stop this? Thats what I don't understand.

By keeping out the technically-inclined folks who could design and build
(and teach others to at least build and use) the advanced equipment and
modes that we need for the future ...

> I don't have on blinders and I'm very open minded.

Sorry ... I see NO evidence of the veracity of these claims ... if not
blinders, perhaps welder's goggles at the bottom of a deep well at
midnight???

> Explain it to me. How does the code test requirement prevent me or anyone
> from using the latest forms of communication technology if we choose to

do
> so? This is an real question and I would like an real answer. Not just
> another worthless comment. Thanks in advance.

OK, I'll take this slow and easy for ya ...

First, you can't use what doesn't exist.

2nd, to develop what doesn't exist you need people who know HOW to develop what doesn't exist (and even to recognize what's needed).

3rd, the people refered to in (2) are kept out of ham radio in large numbers
by the antiquated, distasteful, Morse hazing ritual that many coded hams insist must be maintained at all costs ...

4th, this policy of technological stagnation has already harmed ham radio seriously and, in fact, threatens our future survival as a viable FCC radio service in the coming century because it has resulted in our service NOT MEETING the vast majority of its' regulatory raisons d'etre. (if we don't "get a move on" the FCC will likely decide that we're not worth the spectral
investment they've made, take our bands back, and auction them off to someone who will make FAR better public interest use of them.)

This concludes the *real* answer ... at least the short-form version of it ..
you're welcome.

I sincerely hope that you will consider these comments in a thoughtful manner, perferably in the light of reality, outside of the well, at high noon, and without the welder's goggles ...

CW is the language spoken by hams all over the world and those who restrict their ham activities to the voice portion of the bands are missing part of the ham radio experience. Many CW contacts world wide are between hams who cannot communicate in the voice because of language barriers.

In some respects it is the written portions of the current exams that are more obsolete than the code requirement.

If you really want to get the cry babies made lets put in the requirement for US. operators only to learn and become proficient in american morse as well as the international morse code for the higher classes of liscenses.

The advanced class morse code requirement should be raised to 20 wpm and the extra to 40 wpm. The code heard on the extra class portions of the band is just awful and raising the requirements would help.

Hi Graham, real answer. I work with a guy who designs the latest forms of communication technology and he is prevented from putting them on the air on the HF ham bands by the code test requirement and some other silly rules.

Graham wrote:

> So once again you have demonstrated your inability to use simple logic.

Seems you missed the point. I didn't write that. The president and board members of the Radio Amateurs of Canada, Inc. wrote that. And for your information, I make my living designing logic, sometimes simple, but often quite complex. I hold patents in the field of logic design. How 'bout we replace the code test with a boolean algebra test. How would you do?

Well, there is one major difference. The charter of amateur radio calls
for advancing the state of the art. It would be difficult to advance the
state of the art if one did not even know the basics of radio construction
and design now, wouldn't it?

Nobody I know who is against mandatory code testing thinks that the
theory test needs to be done away with, this is yet another red herring
tossed out by people who use inflammatory remarks like "welfare ham
licenses". Many think the theory exams should be harder.

Mark KF6KYI (another welfare ham, but not for long)

Hi Gordon, How can you expect anyone to take you seriously when you start
your posting with a falsehood? CW is a method of encoding - CW is not a
language. I have a list of all known languages - CW or Morse code is not
on it. Neither is ASCII, another encoding method.

I don't (but don't stop reading here).

> I don't understand why you think
> that can't be done with the code test in place. You can't purchase and use
> the latest and most advanced equipment because you have to take a code
> test? How does the code test stop this?

In a pure sense, it doesn't. What some suggest is that the continued imposition of the CW requirement serves as an arbitrary and unjustifiable barrier to many people (especially those already technically comepetent) to become hams with HF licenses.

> OK, this is your shot!
> Explain it to me. How does the code test requirement prevent me or anyone
> from using the latest forms of communication technology if we choose to do
> so? This is an real question and I would like an real answer. Not just
> another worthless comment. Thanks in advance.

Same comment as above.

Now, having said that, I'll note that from my personal perspective, that is not a reason to eliminate code because it is just as speculative as the procode test advocates claiming the morse test is a good filter against the unwashed and unwanted.

From my point of view, it is only necessary to point out that their is no longer any valid, rational and/or compelling reason to retain morse testing. As soon as both sides abandon any reasons that fall into the speculative (i.e. unprovable) arena, you then get to the crux of the issue which leaves code testing in the indefensible position it now is.

The only problem that I have with *any* enforcement measure is that, with
```

the FCC "out of the enforcement" business, who's going to play "radio cop"
and how do we assure that "justice" is metered out in a fair and
even-handed
manner ... I sure as hell don't trust the ARRL enough ... and I certainly
would
never vote in favor of giving them that sort of "power" ... they've done
far too
much damage to the ARS already without power ...

Regardless of code/no-code, technical issues, or anything else, one thing
that the ham community also needs to come to grips with is developing
some sort of way to actually see that the rules are enforced and that the
sociopaths that do slip through the licensing process are eliminated ...

yeah, ok again. try reading the my post again after shrugging the
shackles of a "two party" "service". i was merely stating the obvious.
getting my w.a.s. i heard little else. i took the easy way i guess and
ran the gambit, 160m - 10m.

> (glad to hear you do some building, despite your feeling that
> theory knowledge is unimportant)
>
now there's a grammar lesson. unimportant and irrelevant are not listed
as synonyms by roget. no-code says code is irrelevant AND unimportant
due to it's antiquated nature. i merely stated that the same or higher
ratio of unused theory exists in ham radio. my theory credentials
are pretty good but not the issue here. now a "little" building strikes
a more personal note but i'm sure that was not intended. my multicast
repeater system is the pride of s.c. MO and certainly mine. all built
or
assembled by me. the club has it's own 2m machine that it supports.

> > people DO buy off the shelf radios and use the spoken

didn't say it was, just pointed out what's out there. i studied
the same manuals. my station was the ONLY one in dent county that
could assist the local relief authorities when the entire town lost
power
for a little over 18 hours. [that's the best anecdote i have barring
charity and non RF related community work] i was doing what ham radio
is about before i knew what ham radio was, so i am enlightened to some
degree.

again, read the post. to clarify what must have been obscure, i was
commenting on how easily the debate can and has detracted from ham
radio. i did not single out either side as being right or wrong.
i did state my opinion at the end but not in a way as to cast blame
on any other view.

lot's of non hams lurk these groups, i merely wanted to bring to light
the need for a positive debate on BOTH sides rather than a negative one.
it's takes little experience for that.

i'm sure i've quoted far too much and for that i apologize to the
ever present bandwith ;)

It's so interesting to see the code/no-code debate still going.
It's one constant in a changing world. :-)

I was licensed in 1968, and held an Advanced Class license from 1970 to
1995. For me, although I always "intended" to upgrade to Extra
"eventually," the real incentive was a 1x2 call. I've always wanted a 1x2,

and that was what it took to get me to upgrade. I even got my initials, so it was really worth the effort for me.

Whether I am talented or untalented, I'm not really more or less so since I upgraded. That observation sounds like a swipe at 20 wpm, and evidence that the observer just doesn't know enough Extra Class hams to make such a judgement.

As for the code and code testing, I have generally been a traditionalist and up until last time a no-code license was proposed, I opposed a no-code license. Finally, the last time I supported the no-code license and it passed (and no doubt, my support was critical in causing it to pass :-)

I have several friends who are highly skilled engineers in electronics, and they always said the code was preventing them from getting a license. And, as soon as the code requirement was dropped, they got their license. I'd certainly say that ham radio is better off for them being licensed.

During the aftermath of Hurricane Fran, I worked in several emergency operations side-by-side with "no-code" Techs. They did a great job, and we needed them. So again, ham radio is better for their being hams... code or not.

Because of the International requirement, I'm not sure totally eliminating the code would be appropriate, but I'd advocate 5 wpm General. They would "know the code" to meet the International requirement, but 5 wpm is little more that just having memorized the code. If the International requirement was dropped, I'd be for a no-code General.

Put Advanced at 10 wpm... General has HF privileges, so to get extra frequencies a knowledge of code wouldn't be out of place. However, in the interest of reducing the number of license classes, I wouldn't even mind them eliminating the Advanced Class license, and adding those freqs to the General privileges.

For Extra, leave it a 20 wpm. You can have a lot of fun and do a lot of HF operating without the Extra Class freqs (as I did for 25 years), so Extra would just be a reward for extra technical knowledge and supporting ham radio tradition. I wouldn't even care if the Extra class band segments were shrunk a little.

Maybe a license structure like:

Tech   (for operations above 30MHz); no code
General (Tech with HF freqs); no code or slow code (5 wpm)
Extra (mostly an honorary license class, with 20 wpm retained)

HOWEVER, IMHO the technical tests should be increased in difficultly, and the publishing of the question pool should stop. It's just too easy to memorize the answers now.

After one night of reviewing the manual, and I passed Extra theory and missed only one question (and I had somehow missed reading the page it was on). I'm an engineer, but an ME not a EE, and even though

I'd been a ham for 25 years, it should have been more difficult than that.

In technical tests, one of the things that makes you learn the material more thoroughly is the fact that you don't know how the test maker will try to "trip you up." However, with the amateur tests you DO know exactly how the questions will be framed. So you can create arbitrary "rules of thumb" that will work for the test, but not for all of the circumstances in real life. Not good.
And I'd definitely be in favor of more questions on digital modes.

So there, I've added a little fuel to keep the debate churning for a while longer. :-)

> Are you truly advocating treating CW like spark and outlawing it?

No, Cecil, I don't believe he his ... I have yet to see a no-code-test
advocate who wanted to outright ban the use of Morse ... that's a
red herring that the pro-coders throw up once in a while ... nothing
more ...

> The
> question is, should qualified hams be free to use CW or not as they
choose?

Of course ... that's all we want ... where "qualified" means "technically
qualified" not "able to beep at fast rates" ...

> To the best of my knowledge, No-Code International wants to eliminate
> Morse code *testing*, not make it illegal to use CW. If you want to use
the
> force of the federal government to outlaw CW, you are worse than the
```

> most rabid pro-coder. I don't hear anybody advocating outlawing all the
> other modes except CW.

Nor we other no-code-test advocates advocating outlawing the use of Morse
by those who wish to use it ...

> For all the rational reasons that the pro-code crowd give for maintaining
> the code-testing requirement,

I haven't ever seen one of those ...

> I consider CW operation a useful skill to
> possess and advocate that every ham learn that skill.

Adovcating and forcing are two different animals ... everyone is free to
advocate
whatever you like, but that doesn't give anyone the right to force their
desires
or their favorite mode on everone else ...

> As time permits, I
> am in the process of trying to get my Morse code speed up to 20 wpm. In
> that respect, I am a member of the pro-code crowd.

Fine an wonderful ... you *choose* to pursue that because you want to ...
if someone held a virtual gun to your head and said "do it or else ..." I'm
pretty sure you'd resent it and feel it inappropriate and oppressive ...

> I am also a member of
> the anti-code-testing crowd because I oppose *all* welfare-state
subsidies.
> I consider both of the following to be evils that should not exist:
>
> 1. Using the threat of force from the federal government to subsidize
> Morse code testing.

Agreed ...

> 2. Using the threat of force from the federal government to outlaw CW.

Also agreed ...

> CW testing is the evil,
> not the CW mode. Don't throw out the baby with the bath water.

Agreed ... I never proposed that we should, nor would I support such
a proposal ...

Sorry 'bout that ... I couldn't resist ... all that stuff about
romanticism, etc.
just set me off ... ham radio is *supposed* (read part 97) to be a
primarily
technical pursuit ... not some romantic fantasy of saving the day with a
Morse tx cobbled together from the wrecked remains of something else
in some  unlikely emergency ... real value is brought to emergency and
public service communications by well-trained operators using modern,
reliable, and prepared equipment and using pre-planned and practiced
methods ... nobody WANTS Morse any more in the real world ... only
a minority of hams cling to it with quasi-religious fervor (remember, even
the ARRL's surveys show that less than 40% of hams EVER use Morse
any more ...)
```

[snip]

> Please! Tell all how the technical level of our hobby will rise like the Phoenix when code is no longer part of the entry mechanism. Give me three solid examples. Hell, give me at least one that is not full of vague and apocryphal rankings.

First, in over 25 years of career as an RF equipment designer and communications systems engineer, I have worked with literally hundreds of highly-qualified, competent, level-headed, polite, considerate folks who would have made wonderfully well-behaved hams who could have and would have contributed greatly to our service and our community were it not for one thing ... the Archaic Retro Radio Luddites and their cronies the "CW Forever Olde Fartz" insisted that the they be required to demonstrate a Pavlovian conditioning in an 1847 encoding/decoding scheme that virtually anyone with a grip on the technical realities admits is about THE worst possible encoding scheme one cold conceive, that has "seen better days," and in which they have absolutely ZERO interest.

These are people who could sit down on any given morning and pass the extra theory while still half asleep and not break a sweat ... They (rightly and understandably) refuse to bow to a community which predominantly consists of their technical inferiors and waste significant amounts of their valuable time and eneergy just to jump through the hoop of some cranky old men's club's fraternity hazing ritual ... in other words, Morse and the attitudes that go with it amongst the technically ignorant who still think Morse is better than sex are the SOLE reasons that thousands of otherwise participating, contributing technical experts have stayed away in droves.

In short, if Morse had been made optional about three decades ago, like it should have been, we'd have a far larger number of technically competent hams in our ranks and we probably wouldn't be stagnated with the technology of the 1950s and 1960s like we currently are ...

> What I have said about our technical testing is true and it needs more than a little fixing. Both of us have made similar observations of the sad state of affairs our ham operations are in--yet we seem to be on different planets in our quest for the holy grail of radio amateur salvation.

We do agree that the technical testing methodolgy is flawed and permits huge numbers of technically incompetent people to gain licenses ... that's directly because the entire emphasis of the ARRL's "Incentive Licensing" scheme was to assert the ability to copy faster and faster Morse as the primary metric of "goodness and merit" in a ham. This "search for the holy grail," quasi-religious pursuit_of/demand_for Morse "skill" has diverted the attention of several generations of hams from the true (technical) nature and purpose of ham radio ... this perversion has been exacerbated by the ARRL's insistence on promoting a "paint-ball combat" mentality of competitive sports where the participants primary goal is to demonstrate their idea of machismo by stomping everthing and everyone into the dust with their "mine is bigger than yours signal." This has perverted our service into "it's ONLY a hobby" and resulted in the total distortion of our purpose and raison d'etre ... I would imagine that Mr. Maxim would spin at at least low RF rates if he could see what has become of ham radio and the League in the past few decades ... he'd probably use the Wouff Hong on the first cretin who insisted in knowing his "10-10 number" in order to talk to him ...

> I see a number of causal agents that are tearing
> at the fabric of our hobby, you choose to take a singular and
> purely emotional and often vengeful mission citing CW as
> Satan incarnate without so much as a clue as to the rest of the problems
> facing the hobby.

See above ... there's more wrong with ham radio than *just* Morse but MOST of it rests on the foundation of perverted attitudes that Morse fanaticism and the ARRL have promoted and enforced for the past few decades ... the ARRL and it's retrogressive, stagnating policies are orchestrating the ham radio equivalent of Jonestown or the recent mass suicides near San Diego ... unless hams wake up and reject this cultist fantasy dogma and at least make an effort to catch up and move towards the 21st century, we're equally suicical.

The idea that ham radio can march into the 21st century and survive with an insistence that it's primary focus is the maintenance of Morse forever (or that Morse is even *important* any more) is at least as far from reality as the belief that those poor, misguided folks near San Diego have joined aliens on a spaceship following the Hale-Bopp comet ...

> the testing process that will ensure to a degree that our amateur radio
> hobby/service will indeed serve the public's interest.

Steve (much to my surprise and pleasure at the time) recently made a proposal that I felt went a long way towards what we need ... I offered up a few suggested modifications and others did as well ...

It basically was a compromise (for the time being at least) that would have kept a 5 wpm Morse test for HF access to satisfy the ITU treaty (though a 1 character/day test would, too, since no speed requirement is specified). I suggested starting with 3 classes of license .... a VHF and up no-code like today's no-code tech, only with a more appropriate level of technical knowledge required for the privs conveyed; a "beginner" (or whatever you want to call it) license with the same test, plus 5wpm code, and full HF access all bands, all modes with a power limit of say 50-250 Watts PEP output maximum ... (the theory test for these 2 "lower" classes of license would be AT LEAST AS comprehensive as the (current) full general class, probably a bit more ...); and the "advanced" (or whatever
you want to call the "highest" class of license) would gain the 1500W PEP output power limit, the ability to be a VEC, etc. ... the theory for this would
include all the elements for the lower class, plus more to be equal to or perhaps even a bit more comprehensive/advanced than the current extra theory ... there would be no further code speed test to upgrade to this class.

The idea is to re-emphasize the technical purpose or our service and remove the perverted emphasis on the worst possible mode available (except for spark
which was outlawed years ago) ... note I have not proposed and would not support a ban on the use of Morse by those who wish to learn an use it ... but it cannot continue to be the "guiding light" by which all of hamdom is measured, judged, and valued ... that perverts us from our real purpose and gives us a very bad public image ...

> you just spend your every waking hour sitting in front of the PC
> tapping out vitriolic dogma to entertain your droogs?

Actually I've encouraged quite a few new hams into the hobby, helped them "learn the ropes," etc. I've also been doing some design and development work that may in the relatively near term benefit many (I prefer not to go into details at this time) .... Yes, I have, or have access to "enough test equipment to fix my gear if it breaks" ... I also have a very complete set of design and development tools, ranging from schematic capture (2 versions), to PCB design (2 versions), to simulation (analog, digital, block-diagram-level, and VHDL), as well as xPLD, FPGA, and full-blown ASIC development tools ... in other words, I can design and produce my own custome ASICs ... and I have plans of doing just that ... I also have software and hardware development tools for x86, PIC, TMS370, and several Mot uP/uC parts, as well as DSP development software and hardware tools for the TI TMS320C5x and 54x and Analog devices ADSP21xx series devices ...

I haven't published anything in the past few years ... it's been a slow period for me in that regard ... but I've published quite a bit in the past ...

Does that measure up to your standards???

> > "get the hell off of 'MY' frequency with that newfangled digital stuff"

> through the cw guys with ease. Yup Yup!

They will ... and they do ... the cretins with their strings of dits and swooshing carriers don't really accomplish anything ... except perhaps to occasionally cause a retransmission or slow the throughput down a tad ... but they can't really distrupt a well-designed digital system ...

However, that sort of behavior is STILL unacceptable and deplorable and should be discouraged and punished when proven.

> to give them the needed exposure and hopefully sink the metaphorical
> magic hook into their emotional centers.

The problem is that too many balk at the Morse requirment ... it's
like "buyer's remorse" ... they're hooked and interested in all the
technical
stuff ... then they find out about the code and go off to write software,
build computer BBS systems, and other stuff that satisfies their technical
side without the torture and wasted time of Morse ... people who LIKE
Morse seem irrationally incapable of understanding that they are in the
vanishingly small minority ... they can't believe that people won't "come
around" and like it "if they just learn it and give it a try" ... that's
fantasy.
It's like forcing everyone to eat beets because YOU like them, in the
belief that "If they just try them, everyone will like them." Doesn't work
that way ....

> I did not say code testing is a useless hazing ritual. It is indeed a
> ritual and as I study this process in more detail I have come
> to believe it is an excellent ritual for all hams to partake in.

Rituals have no place in government licensing schemes designed
to grant access to publicly-owned resources like the highways or
our spectrum ...

> it were possible I would suggest that all hams, when they passed
> a specific level of code and technical testing, be taken to a
> quiet outdoor place, bon fires would be set, drums would pound, bamboo
> flutes would play, and each candidate would go through a real rite of
> passage ceremony where the license, in the form of some metal icon,
> would be presented to the initiate.

Perhaps is could be literally pinned to the flesh of their chests, like in the recent military scandals??? I think you're taking this ritual stuff FAR too seriously ...

> And with this initiation the new
> ham would be lauded for his accomplishments in getting to his/her
> current level, but he/she would be admonished as to what would be
> expected in the future. Technical competence would be but one
> continuing quest with code as another skill to master and maintain.

Code has a vanishing place in the future of ham radio ... times and technology change and all the wishful thinking and dogma in the world cannot change that ... the only question is will ham radio survive to have a future or will it stagnate so badly that it no longer provides enough "return on investment" to justify its' spectral allocations ... IMHO, we're at or past the failure point now and the regulators just haven't gotten around to figuring out how to drop the axe yet ... we need to do some fancy footwork and fast in order to escape the executioner's blade ...

> Carl, I would like to think that you and your buddies are sincere in
> your concern for the welfare of the hobby/service. It would be even
> more convincing if somehow the debate could be tempered with enumerated
> suggestions or steps by which a no code system could be worked our,

We've suggested exactly the sorts of progresive solutions that I've mentioned
above ... they are all always summarily rejected by the "CW forever crowd".
The ARRL committee is actually proposing even more regressive "restructuring"
that will increase the difficulty of code testing and make code testing and even
more dominant barrier to upgrading than it has been in the past ...

> perhaps some schema that would allow the continued use of code testing
> in a form that will satisfy those who would feel cheated if their dues
> had been paid only to have the accomplishment denigrated by saying
> that their struggles were meaningless.

Learning faster and faster code has meaning only if the student enjoys and values it ... otherwise it was just a tortuous hoop that one jumped through to pass a hazing ritual ...

In my suggestions for the new license structure/testing schemes, I said that I would support a grandfathering of current priveleges for current licensees
until their next renewal time or 5 years, which ever was longer ... at which
time they would have to pass the new written tests ... and that I would very
much support retesting (with current material) at each renewal ... even if it
was just a quick "spot-check" test on newer develpments that everyone took,

rather than a complete, comprehensive retest, it would emphasize the
importance
of maintaining technical currency and the true nature of our service.
I think the time allotted is sufficient notice and opportunity to study for
those
who wish to maintain privileges to comply ...

> The operational relevance of
> CW is not an issue nor is the efficiency of our current data systems

> find that an adhocracy of mixed modes seems to form automatically and
> for reasons that are too difficult to explain in this venue, ham radio
> just works despite all of its archaic trappings..works well.

When the crap hits the fan, preparation of systems, operators, and
proceedures, coupled with training and practice are what "cut the mustard."
NO EMS agency has any use for CW any more ... they all want tactical
voice on VHF/UHF-FM with SSB for wider area nets, and they want
packet interties for bulk written message traffic ... offer them a crew of
Morse ops and they'll virtually universally laugh you our of their op
center with instructions to get out of their way and stay out of their way.
Offer them something that they see as useful and they'll welcome you
with open arms in most cases ... unless they've had a bad experince
with untrained, unprepared lids in the past ...

<337553A1.25A@calweb.com>...
>The reject from an asylum is your metaphor and your
> lopsided analysis, not mine.

NO ... it's not just a metaphor ... or a lopsided analysis ... it's the way
that technically competent people who are unwilling to bow down to the
false god of the Morsedist quasi-religion are treated by technically
ignorant beepers who can't hold a candle to people like Cecil is talking
about in terms of ability to contribute to the service ...

In fact, I maintain that the, deep down inside, the beepers *know* how
inferior they are to these sorts of folks and they can't stand the thought
of facing the fact that beeping fast doesn't count for squat any more in
the real world, so the reject, mistreat, and drive away people who with
superior talents to try to prop up their own sense of importance.

That's the way *I* see it ... and it's no wonder that people like Cecil's
acquaintance figure hams are a bunch of jerks who can GTH ...
it's exactly because that's how many hams act ...

My God!!! Something that you'll agree with me on? Are you feeling ill,
Mike?

Seriously, the case is valid and there would be revenue involved for
someone
in producing study manuals ... though I have doubts that the ARRL could
ever
come to terms sufficiently with modern technology to produce viable study
materials for a meaningful test ... they'd have to subcontact it out for
sure ...

> I've always thought it was because they had more money than us... Silly
me.

Yup ... occasionally the goverment screws up and has enough sense to do
something right ... the original establishment of ham radio as a service
for technical experimentation and self-education and public service
communications
was such a case ... they can still see the possiblity of a non-cash return
on
investment, but we're not producing under the current conditions ... that's
why
we've lost bands and why we'll continue to loose them unless we turn things
around and get ham radio back on the charter track ... I know you'll not
agree
that that's a primarily technical course, but that's the reality whether

you can
see it or not ...

Let's not continue the lowering of standards in this country. May CW is
not loved by all, but it is not so hard to learn, really. If the hobby
has value to you, learn the code. If we scratch the code, next will be
theory and then will be......................

Keep the code, it has value as a filter if nothing else.

Hi Cecil,

No he didn't but I would certainly like to chat with the fellow

since I would be interested in his story. As to "lower class hams"
I find the label disgusting and would not entertain the thought.
Ludwig Van was apparently deaf as a post, but his music is still
great...hardly a cripple in the general sense of the word.
     The great American Historian, Francis Parkman, was so visually
and physically crippled that he had to fabricate a string matrix
to support his quill pen, yet he turned out some of the richest prose
on America's history and is the envy of numerous historians even today.
His style is so rich that it actually aggravates some historians and
writers who, with complete faculties, cannot come close to his prose.
Read his "Oregon Trail" sometime for a glimpse at real genius and
fortitude even if his version of history may tend to push the
envelope of truth from time to time.

     Bob, KE6F

Even if it is, we shouldn't worry too much about it. While high blood lead
levels aren't healthy, they don't have too great an effect on the mental
faculties of adults. The concern is in young developing children, where
high blood lead levels correlate strongly with reduced mental function.
That's probably because the brain is still developing, and is more
vulnerable.

Sort of like you going out of your way to insult Carl and get the mud
slinging started again. Left to his own devices Carl's posts are

usually fairly well reasoned and quite the oposite of yours, perhaps
this is the reason for your seeming personal dislike for him. To my
mind Carl's greatest weakness is letting YOUR personal insults get
under his skin. As you say "some things will never change".

Bob Miller wrote:
> Hmmmmmm, perhaps someone will explain how the OOTC guy went through
> the metamorphasis from Conditional to Advanced.

Hi Bob, sounds like you're implying that I did something illegal. Anybody with half a brain can see that you have switched from arguing the issues to personal innuendos. That's what usually happens when one is losing an argument. It matters not one iota to the *issue* whether I assumed my dead twin brother's identity and don't know a single Morse code character. What you are doing is called "argumentum ad hominem". Did you think a member of Mensa wouldn't recognize it? Guess a real ham wouldn't even notice?

My novice license expired in 1952. If I had waited until 1997 and got a no-code tech license, I would still be eligible for OOTC membership. OOTC requires on the air 40+ years ago, nothing more. What? Real hams shouldn't use conditional licenses for OOTC membership?

I traded my AZ call, KG7BK, for my previous CA call, W6RCA, just as soon as it was possible. You don't seem to like the fact that I got my old call back. With a call like yours, I don't blame you for being jealous. Real hams have Wx3 calls.

Why is the personal attack necessary just now when you know I have previously freely volunteered the information that I had never had an official 13 wpm CW exam? What can you possibly gain by me repeating the story? Once again, the old-phart general who gave me my conditional exam didn't bother testing me for Morse code since I had bested him over the air at CW and he had no machine for sending Morse code. So here I am as an advanced with a EE degree and 40 years of engineering experience as a result of that conditional license. Would you have me undo all of that, or what? Real hams don't need EE degrees? They only need Morse code?

I gather in your way of thinking, I should be kicked out of ham radio since I didn't get into it the "right" way. What I did was legal but somehow immoral based on your system of morality? Guess you don't want to talk to Jim after all since he got his license legally through the waiver process. Real hams don't get waivers?

Look for me any night on the novice portion of 40m. I do not enjoy
CW QSOs faster than 10wpm. Guess you would tell me to do 20wpm
whether I enjoyed it or not but to do so would be a sign of mental
illness in more than one of us. What? Real hams don't do 10wpm?

Would you like to start a new newsgroup called alt.Cecil.die.die.die
(like the alt.Barney.die.die.die) or would you like to get back to the
issues and avoid personal innuendos from now on?

Actually Alan for some people it is not all that easy. Apparently is was reasonably easy for you but it can be very difficult to impossible for others. Saying "it is not so hard" strikes a nerve in folks who expended massive effort to master code, even worse for those who simply could never do it.

As to its value as a filter, what does it filter, and is this filtering a good thing? It filters out busy technical people I fail to see the benifit in this. It apparently does not filter out lids as 75 meters and portions of other bands demonstrate. Some of the best most curteous operators you run across are the new nocode techs. They don't quite have it all down yet and they want to do things right so they try harder. In my area at least they run most of the clubs and organize the hamfests because it's all new to them and they want to contribute.

In fact the primary beneficiaries of the current caste ooops I mean incentive system are the code adepts perhaps at the expense of the greater good and even amateur radio itself. Just some food for thought.

Jerry

Thats ridiculous, but maybe not for you. If a person spends 2 fifteen minute sessions per day for 3 - 4 weeks that person should be proficient enough to copy 20 wpm. There is a stipulation though. The person must WANT TO LEARN the code.

> It takes another 5 years of practice to begin to approach the proficiency
> required to communicate with all but the very best operators on the air.

I telling you from experience. If you pass the code at 20 wpm and then operate a 5 wpm, as long as your code is not QLF, you will be operating proficiently with anyone that QSO's with you at 5 wpm. However, if you passed the 20 wpm code I can't comprehend why you would want to operate at a slower speed, unless you JUST WANTED to operate slower or work someone that sends at a slower speed. Geez, is it really that difficult???

> Some day I hope to master the code, but I fear it is another 5 years away.

You're a quitter; a loafer; a whiner; a procrastenator. If you continue to make excuses you'll never feel at ease at 20 wpm.

Practice...Practice...Practice, you'll get there, someday, SOON if you

REALLY want to pass the test. GOOD LUCK!

Hi Gary, it's a polite way of saying the same thing. "I don't have time"
is a little softer than, "I don't have time to waste on such nonsense."

No personal attack, just a clearing of the air. And if the
above is not a slam at every ham that has a call with Two Alpha
characters in front, then what is it. Why in the world would I
be jealous of you Cecil. I have enough problems in life without
wasting my energy worrying about whether you think my call letters
are uncool. BTW W6RCA is a cool call and I am glad you got it back.

I really don't see what the EE degree has to do with ham radio. It is
not a requirement. I graduated University with honors and am finishing
up on my Masters this year, yet it has little to do with ham radio so
what's the point?

> I gather in your way of thinking, I should be kicked out of ham

Why would I want you kicked off the air? Hell, the more
the merrier Its just to darn bad that have not had these discussions
on the air as it would sure make for interesting communications. I
think we can both agree that most ham QSOs, regardless of mode, are
perfunctory in the main and usually pretty boring.

>
> Look for me any night on the novice portion of 40m. I do not enjoy

>

Actually I prefer to putter around the same speed that way I can
write it down from time to time without cramps. Yes, even so-called
CW operators have their problems with the outdated mode. Basic rule
of the road on CW is to give back speed as it is given to you. If it

is 3-5 wpm incoming then it is 3-5 outgoing. No problem. If it is
40-50 incoming I say GNOM/73 and turn the rig off.

> Would you like to start a new newsgroup called alt.Cecil.die.die.die
> (like the alt.Barney.die.die.die) or would you like to get back to the
> issues and avoid personal innuendoes from now on?

Me thinks I have poked too hard at you Cecil and for that I apologize.
My goal this weekend was to wade into this hornets nest to see what
was driving the CW wars. I have found that both sides have strong
convictions about their stands on the issue of code and that there is
probably little room for compromise among the players. Contrary to most
of the anti-code-test faction's published thesis, I find that most of
the arguments in favor of a no code test to be steeped in unsupported
emotional technical dogma and the pro-code-test faction to be steeped in
hopeless tradition. Tis lose-lose combination at this juncture as I
see it. But as the comedian, Dennis Miller says, "Its just my opinion,
and I could be wrong."

In any case, I wish you well, Cecil, and perhaps we to can
continue this dialog without rancor or strutting or innuendo and
perhaps see some area where both sides can save a lite bit of
their cultural turf and have a little cake to eat as well.
Tradition. Besides, All little kids love Barney

keep up the good fight.

But what response does it have? Is it lowpass or highpass? From some of the indications I've seen on HF, I'd suggest it is lowpass since some mighty lowdown people seem to have passed it. Perhaps it answers the question "are you dumb enough to do this?"

You do know what the most common last words of a redneck are don't you?

"Hey ya'll, lookit me do this!"

That's usually said just before said redneck does something terminally stupid like trying to jump a train with his souped up riding lawnmower.

Well, how's this for starters:
And theory tests are getting more rigorous:
To those that claim there is ONLY a lessening
(dumbing down per the likes of several poster's
past comments here) of all requirements needed
for the various theory tests AND those that keep
harping on the rote memorization of pool questions,
you will be happy to know that theory test pools
already have changed significantly and will impact
as of 7/1/97.

As was reported in the W5YI Report of 12/15/96,
the NOVICE and TECHNICIAN question pools
have increased by 46%. The prior set of
questions comprised a total pool of 632 questions,
while the new pool of questions is now 924.
The Novice pool has increased 41% from a total
of 342 questions to 483. The Technician pool has
increased 52% from 290 to 441.

Now I don't know anyone that can just spend
a weekend or even longer to exactly
memorize 440 questions, much less the
over 900 just to pass the Novice/Technician
set of theory elements.

What some may not have known (and I include myself
in that) is that there is no upper limit to the quantity
of questions that can be in the pool. There is
only a part 97 minimum (97.523) that requires
"Each question pool must be at least 10 times the
number of questions required for a single
examination."

Given that no upper bound exists for question pools,
I'd like to sugest that each question that deals with

a formula calculation have at least 20 iterations
where each iteration uses a different set of variables.
That should truly eliminate any rote memorization of
the questions involving formula calculations.

>Carl, I would like to think that you and your buddies are sincere in

>had been paid only to have the accomplishment denigrated by saying
>that their struggles were meaningless.

How's this suggestion:

To: QST Correspondence (sent 4/16/96)

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and attempt to bring them together. Step one is acknowledging that there is a middle ground. In the CW debate, the middle ground most frequently mentioned seems to be that even if CW is less relevant today, there should not be any elimination of CW testing, unless there is an increase in difficulty for the theory elements. What I propose here may not be a perfect answer, but it does seem to address both concerns.

Current test requirements for General and Extra require the passage of a CW test at 13 wpm and 20 wpm respectfully along with a separate theory test. In both cases the CW test is a stand alone, pass (70% correct) fail requirement. But what if we offered test takers the opportunity to take the test elements as they do today OR, as an option, we let them take the 13 wpm or 20 wpm CW test as an integral part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a passing score of 70%, they would be granted an CSCE and then take the theory test as before. However, if they failed the CW test, they would be permitted to merge the CW test results from that day�s test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW

test.

While I haven�t shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn�t issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn�t attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

And what grandiose claims would that be Jerry, that I am dyslexic and attended the Oldman School of Education for it, that I hold a degree in special education, specifically oriented to dyslexia earned at Bowling Green State University, that I am a Doctor of Chiropractic with a degree earned at Palmer Chiropractic College, that I am licensed to practice in the States of Ohio, Michigan, and West Virginia?

Can you offer me any proof that the above is not true Jerry?

By the way, there are still two dyslexics who have passed the 13 wpm code Jerry. You and I.

Even I think that's lame, Cecil. If he doesn't have time to get on the net,
how could he have time to contribute to the ARS? I'd buy that he doesn't
want to *waste* his time arguing with us, but I don't buy the idea he literally
doesn't have the time.

And if the aliens land, you will probably have your ham radio taken away. There are all sorts of scenarios unrelated to reality that you can worry about. Those more efficient modes are already allowed in the CW portion of the band because, on HF, there are no dedicated CW frequencies. All of them say "CW, RTTY, and data" or "CW, phone, and Image".

>Cecil, you are incredible.

Thanks Bob, but I'm not really. I'm just an aging old fart ham going blind and deaf ROTFL in my skivvies trying to drink a beer.

>But when a person is put
>on a marble throne as the Poster Kid for No Code...

Nope, that's not me. Got no throne and I'm far removed from being any kind of kid.

>As I said if you think you
>deserve the honor of wearing the Red Robe then do so.

Nope, you must have me confused with someone else. I don't even have any red skivvies. Just beer all over me from ROTFL.

>And if the above is not a slam at every ham that has a call with Two
>Alpha characters in front, then what is it.

It's <tic>, Bob. Get with the program. How come everybody can poke
fun at no-code techs and I can't poke fun at two alpha letter calls?
There's more than one way to play the "Real Ham" game.

>Me thinks I have poked too hard at you Cecil and for that I apologize.

Dang Bob, I thought you were joking - you mean you were serious? In that
case, meet me at the San Tan Mountain at high noon.

This is an absolute load of crap. Like any other reflex skill the ability to copy Morse code varies widely from one individual to another. I am very used to accomplishing whatever I set out to do ad while I have passed my code hurdle is was by no means the cake walk you represent. In fact I had a far harder time than the original poster did. Please don't try and pass off that WANT TO LEARN crap on me.

My commute varies between 15 and 90 minutes. I had code tapes on every day for 2 years. It took over a year for me to hear the difference between letters reliably. Some peoples brains are better suited to thinking that being a modem, I seem to have one that is not well suited to modem work. OTOH when I did pass the code roadblock I found the written tests rather trivial, not because I memorized the question pool but because I understand the physics of the EM spectrum.

You're an arrogant egocentric horse's ass. You are a poster child for the "drive people away from ham radio" crowd. Why indeed would he want to feel at ease at 20 WPM if people like you are what he can expect to find on CW. My recomendation to the original poster is to find a way to pass the stupid haszing and then turn your back on code forever. If this fellow with all the harsh words for you is representitive of CW ops forget them. If he has really offended you then work it out by working against institutional support for an obsolete mode.

And what part of the bands would that be that you're referring to????

Do you mean the small segments on 6m and 2m that are the ONLY
"CW only" segments in all of our bands???

Or are you under the mistaken assumption that the areas where phone
is prohibited are "CW only" ??? Guess again ... modern digital modes
are already on equal footing with CW there ... you beepers may resent
it, but it's reality ...

Ridiculous ... the FCC will NEVER eliminate theory for what's *supposed*
to be a technically-oriented, experimental service ... they didn't
establish
ham radio for the sort of competive games, electronic paintball
competition,
collect "10-10 numbers" sort of crap that some of you twits have perverted
it into ... with the encouragment and support of the twits at the ARRL ...

> Keep the code, it has value as a filter if nothing else.

For filtering out what? Competent people, perhaps ... certainly not lids
twits, and cretins ... just listen to the coded hams on 80m and 20m ...
the vast majority of brand-new no-code techs behave MUCH better ...

As far as I know, the US is the only administration that sub-allocates the
amateur bands, whereby certain emissions are prohibited in certain portions
of the bands. Considering that the rest of the world is able to cope without
sub-band allocations, and there is indeed no call for the eradication of the

use of Morse code, then Bryant's conclusion has no basis in fact and is mere conjecture without foundation.

The pro-code testing advocates can't have it both ways; on the one hand, they claim that its popularity legitimizes a government sponsored welfare program that will spit out ineptly trained Morse code decoders, the need for which is merely speculative, rather than having any legitimate spectrum management goals. While on the other hand, cringe at the thought that if the Morse code testing program was to be eliminated, then those who use that mode will be subject to a possible prohibition of their mode of choice. The pro-code crowd seemingly resent (or perhaps more rightly, are in abject terror of) the concept that the use of Morse code should be able to survive on its own merits, rather than having to depend upon a government program.

From the http://www.nocode.org/ opening page:

"No-Code International is a new temporary organization dedicated to the abolition of the Morse code requirement for all classes of Amateur Radio license. We intend to disband the organization as soon as the Morse Code requirement has been eliminated in all English-speaking countries."

In a quick scan of their web site, I find no references to eliminating, banning, or restricting the use of Morse Code by radio amateurs. The debate is about mandatory Morse Code *TESTING*. This keeps getting twisted into something else by certain members of the "Pro-Code Testing Party"(tm), presumably as an attempt to drum up support of those that otherwise wouldn't support their position.

If CrACKeD is truly in favor of eliminating Morse Code and not just the mandatory testing related to it, I believe he stands nearly alone in that stance. Certainly No-Code International does not advocate that position.

So what about the people that have a hard time with theory? I know people who had an easy time with the code but a bear of a time with the theory. Why shouldn't they be crying "get rid of the theory and make the code tests harder"! You say CW is obsolete? Well, in ten years that hard theory test information will be, too. The stuff the electronics schools were teaching ten years ago about the 8088 processor is ancient history now.

This whole discussion is getting more ridiculous by the second. Who can sound smarter than whom....Who can use the biggest words...The anti-code people won't listen to anything the CW people are saying.

But then, what do I know? I'm just a stupid Extra. At least that is what it sounded like someone was making reference to. Whew!!!!!!!

Looking to purchase an old HT. Needs to be in the 2 meter or
440 band, single frequency (crystal) would be fine. Need only
transmit section at 100mW for DTMF remote control application.
I don't need the battery pack or antenna. Phoenix/ L.A. area.
Thanks,

Steve KD6NQA

Hi Greg, simple answer - the theory test is relevant - the code test is not.
This is not a Morse Code Service - this is an Amateur Radio Service.

> You say CW is obsolete? Well, in ten years that hard theory test information
> will be, too.

Of course, the theory test will need to be dynamically updated as time passes
just as it has been in the past. The Morse code test is what has stagnated.

> This whole discussion is getting more ridiculous by the second.

Maybe a quote from the President and Board of Directors of the Radio
Amateurs of Canada, Inc. would help: "To suggest that the code be
viewed as a 'filter mechanism' to exclude those unable or unwilling
to learn the code, is discriminatory".

The stuff electronics schools teach about application hardware is always obsolete, usually before the ink dries on your diploma. That's why the amateur theory exams don't ask about specific hardware implementations. They ask about fundamental theory. *That never changes*. Maxwell's equations are just as true today as they ever were. Ohm's Law is still as valid today as it was when I was licensed. Inductors still have inductance and capacitors still have capacitance, just like they always did. Kirchhoff's laws still hold, and are just as useful today as they ever were. Etc. Theory lasts forever (unless some shocking discovery overturns it, which is *extremely* unlikely here given the myriad proofs of fundamental electrical theory we have down through the years). If you don't understand that, then you don't understand the fundamentals you need to know to be an amateur, Extra Class license or no Extra Class license.

Actually Tom under current rules the CW band plan spectrum can already
be used for more efficient modes of communications. RTTY the tors and
Clover are all narrow band so they can be used on the "CW" portions of
the bands. But since they are so efficient they don't have to "hog the
bands".

What do you disagree with? Do you think we should end CW as a
communications method? That seems to be what you are saying. Sorry old
man I must disagree we should keep the code as a legal way to
communicate just end the testing.

There are neither lower-class, middle-class, nor upper-class
distinctions of amateur radio ops. I do not concur with this discourse.

Which is EXACTLY what you egg heads do to the people who found the code was easy and the theory was hard. So, if we use your faulty logic we should drop the theory and make the code test harder. See, won't float will it?

It makes no difference if code is easy or hard. The issue is
and continues to be that it (code testing) no longer
deserves to be a separate pass/fail test element to gain
HF access. There's NO compelling reason today to force
anyone to learn CW for HF access, much less advanced
speeds up to 20wpm for additional privaledges having nothing
to do with any need to operate CW at all.

Terry,

I am glad that you, personally, don't feel this way, but ... unfortunately
..
many coded hams do ... to many of them, the main achievment of their
entire lives seems to be that they passed the 13 or 20 wpm Morse test
so they could go back to sleep and remain technically ignorant, awaking
only for the occasional "move" in some radio-based version of paintball
wars (or "king of the hill," or whatever game it happens to be), collect
another "10-10 number" or gather another piece of wallpaper
... something that they've convinced themselves is "the true meaning
of ham radio" ... it's pathetic and it's killing ham radio ...

There's a big difference between a band plan and where a mode is predominately
used. Listen to 7.000 to 7.050 and tell me how much RTTY and AMTOR you hear
compared to 7.075 to 7.100 Mhz.

I don;t want to get invloved in this thread, but I needed to add to what Graham has said about learning the code. I know a couple of EXTRA class hams, who passed the code and the tests, but don;t know a damn thing about Amateur Radio and couldn;t copy code at 5 WPM, let alone 20. Myself, on the other hand, am a General. I am working on my Advanced, but I refuse to just MEMORIZE the questions and pass the test. But that's how I am doing it. However, it's been so long since I passed my 13 WPM, I am certain that I couldn't copy code at 5 WPM either. It does take practice.

If you haven;t taken your code requirement, do it. You'll be glad you did. I have a friend who is now an Advanced who had DXCC on 10 meters as a Technician. With the sun spot cycle coming back around, it's going to get good again!

Oh come on now, Cecil. That is a real stretch in the CW v war. How about taking the game of golf. Probably a lot more dips out there batting a ball around with a really obsolete club. Why don't they just get some BIG shotguns out on the the course and do some real ballistic golf. Why use obsolete technology just trying to get to the 18 hole and a dry martini? Well it's tradition mate, pure and simple. Take away the tradition of CW and the house crumbles. Nothing else to debate.

73, Bob, KE6F and so on.

I tried, but I have FINALLY gotten sucked into this stupid CW/anti CW debate! Damn!!

First off, if everyone on here spent their time ragchewing instead of bitching, er, I mean complaining maybe something could get accomplished, or at least opinions swayed a teeny bit.

Secondly, why can't people complain about some worthwhile arguement? Lemme see, in the utopic society CW gets abolished, then a little flood of people get their generals.... The years pass, but there is still this vocal core of whiners that never spent the effort to upgrade their writtens, after all, the advanced written IS a bear, all that theory and stuff.... Well what the hey!! You know, ALL THEORY IS RENDERED OBSOLETE DUE TO THE ADVENT OF SMT CONSTRUCTION!!! I shouldn't have to take this test! Its unfair!! If I can't work on my radio (because I don't have the tools or inclination) why should I be expected to know how and why it operates??!! So we would see this whole idiotic thread repeated, except on a slightly different subject, but probably by a lot of the same people. Wanting a true/false type test or some other way they perceive they could pass the test with minimal effort, but of course not minimal enough so those under them could attain it without effort too.

I suppose I am trying to say that fair or not can always be debated, but these are the requirements in this country, and comparing them to the rest of the world seem to be median. Do not be so resistant to learning something new, sure its effort but when time passes the things we earned with more effort we usually value more. If you think time spent learning CW (or most other things for that matter) is wasted time, what are you doing instead? Watching television? Sure seems like some of us here are NOT spending it talking to other like-minded souls through the aether. All the anti coders in this NG, have you tried talking DX? 2M SSB? How about 6 meters, anyone fool around with that? Plenty of opportunities to learn new things, meet new people. Do that instead of complaining here, or else bite the bullet and at least 'try' to learn CW. Maybe you will find it at least a tiny bit intriguing. Or do this, find some 6 part mini series on TV, and instead of watching it devote that time block to learning CW, and I bet you will be suprised if gosh darn you don't have a firm grip on it by the end of the mini series.

I hope nobody is offended by my using the term "CW" to describe morse code since it actually means continuous wave, the media which transmits the morse code tones.

Since people are going to be looking up my callsign to see what I have or have not done, I'll tell you now I'm a coded technician, yep only 5 WPM. So why should I advocate something I don't have? Because this is supposed to be a hobby, which means something fun, enjoyable, and which you become a better person by practicing. 2 months ago I decided to finally quit talking about it and upgrade, so I passed my general written and now am working on getting my code up to speed. I am planning on taking the advanced written in 2 weeks. It is difficult, especially the code part because with a job, wife, and two year old son my commitments do not leave much time for me to do things I want or would like to do. But thats life, you can either complain or get on with it. I had been using a little homebrew 40 meter transceiver but bought a Yaesu HF rig, it makes it easier to make contacts or just to listen when I'm tired and don't want to QSO. I am hoping to pass my code elements end of June.

I do believe most everyone can do this if they put forth the effort, CERTAINLY much less effort than is wasted here on this subject.

Hi Bob, if there weren't houses crumbling all the time, there would be no
progress.
Keep CW as a historical landmark if you so choose but don't use the threat of
force from the federal government to keep us in the dark ages by prohibiting
the construction of new housing. Live in your rotting, termite ridden house if
you desire. But please allow the rest of us build something that will still be
standing when your house crashes down around you.

Mastering Morse code is a very difficult task. It takes many long hours of

practice to gain the necessary degree of proficiency to pass the 20 wpm
test in all it takes approximately 80 hours of practice over about 8
months.

It takes another 5 years of practice to begin to approach the proficiency
required to communicate with all but the very best operators on the air.

Some day I hope to master the code, but I fear it is another 5 years away.

Hi Christopher, not that I'm talented, but if you take the privileges
in kHz and divide by the wpm requirement, you will see that the advanced
class license gives the most privileges for the least amount of effort.
I could pass the extra written exam and probably pass a 20 wpm multiple
guess Morse code exam but why bother?

Hi Cecil

Well sorry to report that the house is sound and not ready to fall down on my head. I just thing that if we pull too much tradition out of the hobby/service, then the mystique will also evaporate with it,,, nothing more. To apply a little hard logic I would say that all testing regarding ham radio licensing is a rite of passage--not just the code segment.

What most of the critics of code requirements seem to miss or dismiss is the highly romantic nature of the hobby. Even the technical side is steeped in romanticism and all you have to do is read someones source code comments to see it creeping into the thought process.

Perhaps ham radio has seen its time come and now it is time to hang it up.. I am quite serious on this point. The tecnhical requirements beyond regulatory items, are nearly all a priori exercises and mean little after the test is completed--much like your commentary on the alleged obsolete code requrirement.

You can cite anecdotal events where this person or that person did some slick engineering in the amateur radio venue, and I guess we all can and often do so. But in the main most hams just want to get the ticket and get on the air and chat about radios and computers and what ever else seems to come to mind. If their silicon toy from Japan goes on the fritz, its off to the factory. All the Smith Charts and Software in the world are not going to fix the thing. So why bother to learn reactance formulas and return loss calculations, and front end noise temperature calculations and so on...Never gunna use it. The ham who cant copy his own call sign probably can't calculate the inductive reactance of a capactor let alone the noise temperature of an LNA using Y factors and dual temperature terminations. But it does not matter. Those that can do and enjoy doing it..a rite of technical passage to go with the rite of code passage..a nice little package for all who want to play in the ham radio sand box..

I really don't see what the problem is once you rationalize the whole mess. Just dues, Cecil. Code is just the dues you must pay for admission just like useless technical dues...

Keep up the fight for what you belive, but please don't mix the metaphors so much...you will be happier.

Adios es 73

Bob,KE6F

I normally ignore your "welfare" rhetoric, but this is
just too much. I'm guessing you're writing abou the
Technician license without code as a welfare license.

Free clue: code was dropped from the Technician license
over 6 years ago.

Ham radio has not, despite your colorful descriptions to the
contrary, gone to hell in handbasket.

Do you research your facts, or save the trouble by just making them
up? ;-)

Hi Dale, you must be a newcomer. There is no "anti-code crowd" and there is
no push to "drop the code". You must have mistaken such for the anti-code-test
crowd and the push to drop the code-testing. It's an easy mistake to make.

In addition, the pro-code-testing camp is usually the ones moaning about
going to hell in a handbasket. There are several that post regularly to
this newsgroup that hold those licensed after 14-Feb-1991 as not worthy
of being amateurs radio operators. Those opposed to the code tests have
generally been concerned that amateur radio is just going to go away.

How is that any different than a collection of REACT CBers on 11m or GMRS willing to do the same voluntary duties? What may impress the officials is the number of folks willing to volunteer, not what freq'y they operate on.

(If we do away with *all* exams just think of how many more storm-trackers you have!)

>DUE TO THE ADVENT OF SMT CONSTRUCTION!!!

Good point, Mark! I was never much of an electronics "wiz" when I was younger (and still not proficient!) but I wanted to upgrade in the worse way so I studyed hard and passed the Advanced written which IS a bear! I would have LOVED to bypass that written and just take a 20 wpm code test to get Extra, but hey, it was a requirement. Even as Mark said it will all be OBSOLETE theory in a few years anyway, but it was a REQUIREMENT. Hmmmmm, obsolete, have I heard that word before somewhere?

I guess I should have jumped on the Newgroups (even though they didn't exist then) and started whining about it so hopefully the theory part would get dropped someday. Who wants all those "eggheads" in the hobby anyway? (notice the tongue-in-cheek, fellows)

I can see the subject line now.

Re: Theory should die, not the "hobby"

Beautiful, man, beautiful!

Actually Dale you are rather new. The ink is hardly dry on you upgrade to general (congrats BTW) and you have not been a presence on the news groups all that long. To get an idea of how long Cecil has been around find out what OOTC means.

What Cecil says is true those who oppose continued code testing do not call for an end to CW as an operating mode. Only the pro code testing crowd seems to make this leap of faith. Let's try it again. We do NOT advocate an end to code as a communicaions method only to stand-alone code TESTING. Get it?

Many things that *used* to be "requirements" for LOTs of things are not longer ... "requirements" are not inviolate things that must remain unchanged for all eternity ... they must remain relevant in terms of today's technology and the needs of society (in this case the needs of ham radio in terms of future relevance and survival, too) in order to remain valid.

I'm sure that lots of places used to have speed limits designed to eliminate brake-kneck horse races down (then dirt) city streets. Today, the same boulevards are wider, paved with asphalt and have speed limits of 45-65 mph in many places, due to the use of autos and changes in society's needs.

Your argument is akin to asserting that our interstate highways
should be dirt roads with horse and carriage speed limits.

> You ARE whining. If
> you don't want to learn code then take your sorry ass back to channel 19.

You're the "sorry ass loser", sir ... you're so ignorant and narrow-minded
that you can't begin to imagine any progress or change from the rut that
you settled God knows how long ago ...

> But just SHUT UP about it! You want to up-grade? Learn the code. Its that
> simple. You won't EVER get it changed. There are allot more of us than
> there are of you. Get it? Now, GO STUDY YOUR CODE!

We refuse to be forced or intimidated into "worshiping the false god"
of your "Morseodist religious cult."

You have not right to try to force that on others, nor will we grant you
that right ...

And as for your idea that we'll "never get the rules changed" and that
"there are a lot more of you (code fanatics) than us (who favor and
recognize
the need for modernization)" .... DREAM on ... the olde fartz are dying off
and the majority of licensees will soon be no-coders ... LEARN TO LIVE
WITH IT ...

Hi Cecil,

Mr. Harper does indeed play fast and loose with the truth. Previously
he made some rather grandiose claims which turned out to be implicity
if not explicitly non factual. He is worth neither your time nor your
logic as the reply will always be at the school yard level. Pursue
worthy advisaries and leave the krill to the baleens.

> Lemme see, in the utopic society CW gets abolished, then a little flood
> of people get their generals.... T

And a lot of people who wouldn't walk across the street to pick
up FREE Morse code keys/keyers/ paddles/etc. would have
the highest class of license based on their superior technical
abilities ... that would REALLY piss off the folks whose ONLY
claim to fame is the abilty to beep real fast ...

> the years pass, but there is still this
> vocal core of whiners that never spent the effort to upgrade their
> writtens, after all, the advanced written IS a bear, all that theory and
> stuff....

Give me a break ... I've worked over the years with hundreds and hundreds
of people who could pass the advanced and the extra written on any given
morning ... the ONLY reason many of them are not active, contributing
hams is that they're unwilling to waste their valuable time and energy
"perfecting skills" in "an art" from 1847 that they'll NEVER ...

>Well what the hey!! You know, ALL THEORY IS RENDERED OBSOLETE
> DUE TO THE ADVENT OF SMT CONSTRUCTION!!!

What an absurd assertion! You are obviously in the lower reaches of
the more technically ignorant portion of current hams if you really, truly
believe this ...

> I shouldn't have to take this test! Its unfair!!

ONLY rabid procoders have raised this red herring ... I have NEVER
seen a serious proponent of elminating code testing requrements
advocate the position that theory testing was irrelevant, or that theory
testing should be eliminated ... that's just a FUD-based red herring
thrown out by procoders to generate a smokescreen to cover the fact
that there's NO logical, rational, compelling reason to keep code testing.

> If I can't work on my radio (because I don't have the
> tools or inclination) why should I be expected to know how and why it
> operates??!!

If you can't work on your radio, you're not meeting the technical objectives of the Amateur Radio Service ... to encourage self-training, experimentation, etc. to maintain and develop a pool of radio and electronics "experts."

> Do not be so resistant to learning something new

Talk about "the pot calling the kettle black" !!! Morse hardly qualifies as "something new", since it was invented in 1847. Those of us who WANT to learn and develop truly new things through experimentation, construction, etc. have been hobbled for decades by antiquated rules requiring 1847 "skills."

It is the vast majority of pro-code fanatics who are, in fact, "resistant to learning something new" ... they're the ones who insist that "real radios glow in the dark", "real hams beep fast", "no-coders aren't real hams", etc., etc. They're ALSO the ones who complain about "all that newfangled digital stuff", have totally irrational fears about the potential for interference from new (to hams) techniques like spread spectrum that could provide many benifits, and are generally too damned cheap to invest even the price of a couple of nice dinners in a decent restaurant in modernizing their repitoir of gear and modes ... if they have packet, it's 1200 bps AFSK on 2m and it's primary use is to connect to a DX cluster for spotting purposes ...

> Since people are going to be looking up my callsign to see what I have or
>
> have not done, I'll tell you now I'm a coded technician, yep only 5 WPM.
> So why should I advocate something I don't have? Because this is supposed
>
> to be a hobby, which means something fun, enjoyable, and which you become
>
> a better person by practicing.

No, it's SUPPOSED to be a service (which some people participate in as an activity they enjoy ... some are actually more interested in the technical aspects than the competitive games aspects that have perverted ham radio in the past several decades ...

Most people apparently don't consider Morse to be fun (Yes, some do, and that's fine ... nobody's trying to stop them from using it if they so choose ...) even the ARRL's own surveys show that less than 40% of current hams EVER use Morse ... and of that 40% many likely only use it occasionally ....

> 2 months ago I decided to finally quit
> talking about it and upgrade, so I passed my general written and now am
> working on getting my code up to speed. I am planning on taking the
> advanced written in 2 weeks. It is difficult, especially the code part
> because with a job, wife, and two year old son my commitments do not
> leave much time for me to do things I want or would like to do. But thats

> life, you can either complain or get on with it.

Or you can work to change things ... there is no legitimate, valid,
rational,
compelling reason to force anyone to learn Morse ... if you really want to,
fine, but you should not be bullied into it by an antiquated testing
regieme
that bears no relationship to the technical or operational realities of
today,
let alone the future ...

> I do believe most everyone can do this if they put forth the effort,
> CERTAINLY much less effort than is wasted here on this subject.

Many of us don't believe that effort expended to achieve important
change and secure the future survival and growth of amateur radio
is "wasted" ...

When your intent is to inflict pain and suffering, the old ways are
often best. That's why the slow torture of Morse is used for hazing
instead of a quick clean modern method.

> Hmmmmm, obsolete, have I heard that word before somewhere?

All theory will not be obsolete in a few years, but at the rate technology is progressing, there will be a lot of new stuff to learn ... that's why I favor
retesting at each license renewal ... too damned many hams that passed their tests in the 30s-60s took the attitude that there was nothing more to learn and stagnated right there ... that's why they're technically ignorant and inept today, and that doesn't do a damned thing towards meeting our chartered goals and purpose ... that's why our bands are being taken away for commercial services one by one ...

There IS NOT "mystique" to Morse any more ... 50 or 60 years
ago when communications were somewhere between nonexistent
and primitive, folks found Morse via radio fascinating and exciting
and it HAD some "mystique" ... today when compared to cellphones,
the internet, satellite communications and other modern, every-day
technology available to the ordinary citizen, it's "ho, hum" BORING
to the vast majority of people (except those who yearn for "the simpler
days" and pursue antiquated pursuits and collect antique curiosities)

>To apply a little hard logic

Hardly ... more like narrow-minded emotionalism ...

> I would say that all testing regarding ham radio licensing is
> a rite of passage--not just the code segment.

Baloney ... the theory is a valid, relevant requirement, even
though the testing methodology needs fixing and the material
is largely outdated ...

>   What most of the critics of code requirements seem to miss
> or dismiss is the highly romantic nature of the hobby.

Have you been sniffing that solder flux solvent again or what???

>   Perhaps ham radio has seen its time come and now it is time
> to hang it up.. I am quite serious on this point. The tecnhical
> requirements beyond regulatory items, are nearly all a priori
> exercises and mean little after the test is completed--much like
> your commentary on the alleged obsolete code requrirement.

Testing needs to be made relevant and methodology fixed to assure
that applicants really understand the radio/electronics theory, rather

than having simply stuffed some answers into short term memory.

> You can cite anecdotal events where this person or that
> person did some slick engineering in the amateur radio venue, and I
> guess we all can and often do so.

And there'd be a LOT more of that if the Morse hazing ritual were abandoned, technical rules modernized, and that sort of invention and innovation were encouraged rather than looked at with fear and distrust by a bunch of incompetent olde fartz who can't understand the benefits and fear what they can't understand ... you know, the "get the hell off of 'MY' frequency with that newfangled digital stuff" crowd ...

> But in the main most hams just want
> to get the ticket and get on the air and chat about radios and
> computers and what ever else seems to come to mind. If their
> silicon toy from Japan goes on the fritz, its off to the factory.

If more hams were more technically comptent, they'd be more able to fix their own gear ... contrary to popular appliance operator propaganda, the trend towards suface mount construction does NOT preclude fix it yourself, it just means you have to learn some new techniques ... and it doesn't take thousands of dollars worth of specialized equipment either ...

In fact, if hams were more technically competent, they might actually BUILD more of their own gear ... either from scratch or from kits (a resurgence of kits would certainly occur if there were more people capable of building them).

> I really don't see what the problem is once you rationalize
> the whole mess. Just dues, Cecil. Code is just the dues you must
> pay for admission just like useless technical dues...

At least you admit that code testing is nothing more than a useless hazing ritual ... but your assertions WRT theory are totally bogus.

> Keep up the fight for what you belive, but please don't
> mix the metaphors so much...you will be happier.

Well, it had to happen sooner or later. I mean the smart ass
remark about sniffing and so on. Why can't you rascals maintain
any kind of decorum with your commentaries. You tout technical
progress yet you argue with the mentality of gutter rats with
your crass insults and innuendo.   You might make a little more
headway in you case for a no code ham system if you in fact
paid more attention to the tradition and less to half baked
arguments. All I've seen so far is glittering and less than glittering
generalities and snide cheap shots with very little substance.
Please! Tell all how the technical level of our hobby will
rise like the Phoenix when code is no longer part of the entry
mechanism. Give me three solid examples. Hell, give me at least one
that is not full of vague and apocryphal rankings. What I have
said about our technical testing is true and it needs more than
a little fixing. Both of us have made similar observations of the
sad state of affairs our ham operations are in--yet we seem to be
on different planets in our quest for the holy grail of radio
amateur salvation. I see a number of causal agents that are tearing
at the fabric of our hobby, you choose to take a singular and
purely emotional and often vengeful mission citing CW as
Satan incarnate without so much as a clue as to the rest of the problems
facing the hobby.

> > Perhaps ham radio has seen its time come and now it is time

Ok fine. What would you do to fix it up? Come on now Carl. You
and your sidekicks are good at taking the cheap shots at anyone who
tries to have a civilized interchange, so how about dropping the
horseshoe facade of the almighty expert and tell us folks in the
wings how you guys want to rebuild (I guess re-engineer is the new
buzzword in the industry) the amateur radio service.   We anxiously
wait your plan and just shooting the CW messenger is not good
enough. I want some tangible suggestions on how we can fix
the testing process that will ensure to a degree that our amateur radio
hobby/service will indeed serve the public's interest.

> the benefits and fear what they can't understand ... you know, the

Well am I to assume from your comment that I am an incompetent
olde farte? My My. Getting a little emotional now are we. Old Fart
my fat ass. What have you contributed to the hobby as a whole in the
last two years. Have you published any articles that provided state
of the art information for your fellow hams to study and review? Have
you given any assistance, instruction or free equipment to a budding
amateur lately? Or have you accumulated enough test equipment to
set up a facility so you can fix your gear if it breaks? Or do
you just spend your every waking hour sitting in front of the PC
tapping out vitriolic dogma to entertain your droogs?

> "get the hell off of 'MY' frequency with that newfangled digital stuff"

That kind of interchange is as old as the hobby, spark v cw,
am v cw, am v ssb, ssb v am. and so on. Keeps us on our toes. Hell,
if these digital toys are so damn good they should whir right
through the cw guys with ease. Yup Yup!

I agree 10000 percent on this one. You can set up a first
class shop with nifty HP test gear and tektronics scopes and so on
for less than the price of a used HF rice box. No bloody excuse for
not taking care of your junk and learning how it works and if you
can get the parts off the board without roaching the board then go for
it.

>
> In fact, if hams were more technically competent, they might

>

Again I agree 10000 percent. The prophets of doom say that
hams can't get parts to build with. If ever there was a MYTH propagated,
the no parts MYTH is it. Never in the history of the ham radio service
hobby has so much good stuff been available and and microcents on the
dollar. Unfortunately the so call experts intimidate a lot of

the newcomers into thinking that it takes a Ph.D. to design and build complex equipment. Nothing could be further from the truth. All it takes is a good pile of old CQs, QSTs, 73,s Ham Radio mag, and so on to illustrate the accomplishments of our amateur radio service to give them the needed exposure and hopefully sink the metaphorical magic hook into their emotional centers. That is what I have not been able to put across in my prior postings. I am not proposing that we should cloak the hobby in mysticism, just invoke the magic that pulls us into the hobby be it technical or even Morse if it works for them. A simple concept that is difficult to explain when everyone is too busy ranting from their high altitude soap boxes.

> > I really don't see what the problem is once you rationalize
> > the whole mess. Just dues, Cecil. Code is just the dues you must
> > pay for admission just like useless technical dues...
>
> At least you admit that code testing is nothing more than a useless
> hazing ritual ... but your assertions WRT theory are totally bogus.

I did not say code testing is a useless hazing ritual. It is indeed a ritual and as I study this process in more detail I have come to believe it is an excellent ritual for all hams to partake in. If it were possible I would suggest that all hams, when they passed a specific level of code and technical testing, be taken to a quiet outdoor place, bon fires would be set, drums would pound, bamboo flutes would play, and each candidate would go through a real rite of passage ceremony where the license, in the form of some metal icon, would be presented to the initiate. And with this initiation the new ham would be lauded for his accomplishments in getting to his/her current level, but he/she would be admonished as to what would be expected in the future. Technical competence would be but one continuing quest with code as another skill to master and maintain.

Carl, I would like to think that you and your buddies are sincere in your concern for the welfare of the hobby/service. It would be even more convincing if somehow the debate could be tempered with enumerated suggestions or steps by which a no code system could be worked our, or perhaps some schema that would allow the continued use of code testing in a form that will satisfy those who would feel cheated if their dues had been paid only to have the accomplishment denigrated by saying that their struggles were meaningless. The operational relevance of CW is not an issue nor is the efficiency of our current data systems anything to shout about either. When the crap hits the fans you will find that an adhocracy of mixed modes seems to form automatically and for reasons that are too difficult to explain in this venue, ham radio just works despite all of its archaic trappings..works well.
> >

Tnx for the read. I'm tired. I don't usually get wrapped up in these head knocking contests, but I was baby sitting my grandson today and at 6 weeks he could not offer me a lot of conversation although the grins are sure cute.

Carl R. Stevenson wrote:
> Have you been sniffing that solder flux solvent again or what???

Hi Carl, it's worse than that. Most old hams that I know and knew (SKs), chewed on lead-based solder while they built gadgets. I'll bet if older hams were tested for lead-poisoning, it would be shown to be rampant.

Well how can I contact Dr. Williamson to get his views on the subject.
Again, Cecil, your refernce to a presumabley nice fellow is again
an apocryphal statement lacking any foundation other than your
hearsay testimonial. Perhaps Dr. Williamson could get on the net
and speak for himself and perhaps enlighten us all with his observations
and how the code has prevented him from contributing to the amateur
radio service. The reject from an asylum is your metaphor and your
lopsided analysis, not mine.

What say we now, Cecil?

Huh??? Could you please explain how you came to the conclusion
that forcing everyone to learn Morse code "stresses technical
competency"???
(unless you mean stress in the "challenges, strains" sense ... as in
"people waste so much time and energy meeing the code requirements
that they never learn the truly valuable technical stuff necessary to
achieve
technical competency")

Don't hold your breath waiting for "Joe Mama" and the ilk to become
courteous, or even civil ... unfortunately there are far too many
ignoramuses
like him in our ranks ... that's why ham radio has so many problems.

you
> are so quick to defend the position of those who want to dumb the hobby
> down to the lowest common denominator?

Actually beeping is the "dumbest" part of ham radio ... a pure aural-motor reflex conditioned much like the salivation of Pavlov's dogs in response to the sound of a bell ringing ... just like some people have musical talent and some don't, this conditioning comes easy for some and is virtually impossible for others ...

Many of us are capable of easily building machines that are easily capable of outperforming the very best Morse operator in the world with the best of OOK Morse receiving gear ... hands down, slam-dunk by a very wide margin.

Insisting on code rather than real, meaningful technical knowledge and abilities is the dumbing down of ham radio, *not* the elimination of obsolete requirements that serve as nothing more than a hazing ritual ...

> Much like the liberals want to do to America?

Ridiculous comparison ... see the last paragraph preceeding your statement. Those who oppose code testing are actually protesting a govenment-mandated welfare program for Morse and proposing more rigorous written exams on rules and theory, coupled with necessary modernizations in the technical rules.

That can hardly be characterized as a "liberal, dumbing-down" ...

> You can always be a CB operator you know. They don't require code.

Typical pro-code, bigoted, "got mine, you can go to hell" response noted.

> Burden of proof is on the prosecution. You show me any good reason to drop
> it, THEN I'll defend my position.

Actually, as Jefferson (I believe) said, "The government that governs least governs best." (or something very close, to that effect, if my quote is not exact) ... that implies that the burden is really on the government to justify (and continually rejustify) any restrictive requirements that it imposes upon its constituents ... the burden of proof is effectively on the government in this case, just as it is in a criminal proceeding ...

to
> be more RF savvy.

Not necessarily, Cecil ... the test passed is not a limiting factor on
one's
knowledge or skill level ... I know many techs who ARE quite a bit more
RF savy than many extras I know whose main (only) claim to fame is an
ability to beep faster ...

> What I am saying is there would be many, many more extras

requirement.

I've known literally hundreds over the past 25 years that I've been working
in the field as an RF engineer ...

Unfortunately, you're talking about a significant portion of the general
and
up licensees of today ...

What's the matter ... the fact that everyone has "called you out"
for being an ignorant asshole now cause you to be "sick of this"
and want to "drop it" right a way, ("PLEASE") ???

I guess you don't mind being a bully and a jerk if you can do
it with impunity, but when people start telling you off and
"calling a spade a spade" you get real sensitive ...

A valid idea, but one that will never come to fruition... Too much work
for the VECs... Unless, of course, you could convince W5YI/ARRL that they
would make million$$$ selling new license manuals every 10 years... Yeah,
I bet they'd do it then...

>that's why they're technically ignorant
>and inept today, and that doesn't do a damned thing towards meeting our
>chartered goals and purpose ...

I find just about everyone licensed in the past 10 years to be technically
ignorant. Just three days ago I heard a three-month "wonderboy" asking
someone how to construct an attenuator.

>that's why our bands are being taken away
>for commercial services one by one ...

I've always thought it was because they had more money than us... Silly me.

Are you truly advocating treating CW like spark and outlawing it? The
question is, should qualified hams be free to use CW or not as they choose?
To the best of my knowledge, No-Code International wants to eliminate
Morse code *testing*, not make it illegal to use CW. If you want to use the
force of the federal government to outlaw CW, you are worse than the
most rabid pro-coder. I don't hear anybody advocating outlawing all the
other modes except CW.

W6RCA : I won't be on it cuz I'm on 40m CW a couple of times a week.

> A traditionalist, eh?

For all the rational reasons that the pro-code crowd give for maintaining
the code-testing requirement, I consider CW operation a useful skill to
possess and advocate that every ham learn that skill. As time permits, I
am in the process of trying to get my Morse code speed up to 20 wpm. In

that respect, I am a member of the pro-code crowd. I am also a member of the anti-code-testing crowd because I oppose *all* welfare-state subsidies. I consider both of the following to be evils that should not exist:

1. Using the threat of force from the federal government to subsidize Morse code testing.

2. Using the threat of force from the federal government to outlaw CW.

The evil is the threat of force from the federal government, not the CW mode. As a died-in-the-wool Objectivist and Libertarian, I cannot assume any other position. Assuming any other position makes one a statist (collectivist) e.g., communist, Nazi, socialist, fascist, etc.

If you blame the CW mode for the present sad state of ham radio, it's like blaming the gun when somebody shoots you. CW testing is the evil, not the CW mode. Don't throw out the baby with the bath water.

Hi Bob, If Dr. Williamson had time to get on the net, he might have time to learn Morse code. I will make an appointment with him and ask him if he wants to and has time to communicate over email with you.

> The reject from an asylum is your metaphor and your
> lopsided analysis, not mine.

If it doesn't apply to you, why do you respond to it? Some people believe that Dr. Williamson is a lower-class ham simply because he doesn't know Morse code. Are you one of them? If not, my statement didn't apply to you.

>   What say we now, Cecil?

Jim was supposed to send you an email explaining his biological problem with Morse code. Did you get his email yet? What say you?

Ca
> >
> > Cecil has been a ham for over 40 years he doesn't really need a radio

That's odd, The FCC database says that Cecil's prior call was KG7BK, Hmmmmm. seems I remember Cecil reflecting once upon his conditional license. Lets see. Hmmmmm. Conditional class licensee who never sits for a bonafinde FCC code test is grandfathered into a General Class when the conditional license is dropped. Then he sits before a VEC for an advanced class test but now has a code chit for his Conditional cum General ticket. Pretty good. Huh. Now I suppose the W6RCA came from either a prior ticket held way back when or perhpas a relative. Tis a vanity call none the less much like my KE6F except I sat in front of an FCC examiner for mine so I guess it is only a semi-vanity call. Hmmmmmm, perhaps someone will explain how the OOTC guy went through the metamorphasis from Conditional to Advanced. Now I could be wrong on this analysis and I sincerely apologise if I am, but since Ole Cecil is held up as an icon of THE Old Timer who has finally seen the light regarding the so-called absurdity of CW, then perhaps he should be examined closely if he wants to wear the Red Robe. Would be very happy to Schedule Ole Cecil on 40 cw sometime so we could toss it around in real time.

tnx es 73 Bob, KE6F
